H. B. Utley, general purchasing agent of the International Harvester Company, this city, accompanied by Mrs. Utley and their daughter, left two weeks ago for southern California, where they will remain until the middle of March. Mr. Utley is well known in the lumber trade here and his many friends wish him an enjoyable vacation.

Clarence S. Corse, a well-known member of the local traveling lumber salesmen's fraternity, has associated himself in a selling capacity with the A. S. Badger Company, this city. He will represent the concern in northern Illinois and southern Wisconsin territory.

## NEW YORK

Based on a clause of the Interstate Commerce laws, which provides that where a car routed over several different lines is lost in transit the owner of the property may sue any one of the lines over which it comes for the loss accrued, there was heard last week before the Appellate Division in this city a case in point brought by the Welch Lumber Company, large hardwood

producers at Welch, W. Va., against the Norfolk & Western railroad. So far the company has won in two of the lower courts, from which decisions the Norfolk & Western appealed and are putting up a very bitter fight. Decision in the case is expected to be rendered in about two weeks.

The entire business staff of the Stevens-Eaton Company, large wholesale house of 1 Madison avenue, were tendered their usual annual dinner by the principals of the firm at the Hotel Manhattan on the evening of February 10. Covers were laid for twenty, and in addition to an excellent dinner appropriate souvenirs were tendered and a general good time enjoyed. The Stevens-Eaton Company has just closed a contract with the Norwood Manufacturing Company, at Norwood, N. Y., to handle its well-known cut of spruce in the local market for the next year.

Petition in bankruptcy has been filed against Pickling & Co., large manufacturers of automobile bodies and tops, 304-306 West Forty-ninth street, Manhattan. The liabilities are estimated at \$18,000 and assets \$29,000.

President Russel J. Perrine of the New York Lumber Trade Association and head of the large house of Johnson Brothers, Brooklyn, sailed on February 10 with his family for a month's pleasure trip to Bermuda.

The Hoban, Hunter, Feitner Company, large wholesale cypress house of 1 Madison avenue, has, in line with improving its service to the local yard trade, just leased a large amount of water front property on Newtown creek, Brooklyn. Here it will immediately arrange a large wholesale cypress distributing yard, from which it will be able to serve the trade with quick shipments direct from stock.

After two years' attempt on the part of New York lumber merchants to obtain an adjustment of their differences with railroad companies entering the city, the Interstate Commerce Commission has taken up the first for settlement.

Richard J. Donovan, 170 Broadway, appeared for the lumber interests. He alleged that delays in the delivery of lumber extended from four days to thirty-three days, causing much damage to the dealers. He also charged that the railroads required shippers to designate a particular berth in the Wallabout basin at which cars would be delivered, instead of unloading at the nearest empty berth.

Mr. Donovan insisted that where berths and piers were not reserved demurrage of from \$25 to \$10 a day was charged to shippers. In addition it was alleged that by bunching several cars in transit to the consignee the railroads forced the payment of demurrage while the process of unloading one car at a time was in progress.

The hearing developed that nearly all of the freight docks in and near New York are leased by the railroads. Mr. Donovan asked for an order requiring the Pennsylvania to accept freight at one or more piers, instead of a specially designated one. The commission ordered briefs submitted in Washington March 1.

## BUFFALO

O. E. Yeager is about swamped with lumber, so much coming in from the South that he cannot keep up with the unloading. The snow makes it very bad to do anything in yard and he has a large amount sold, waiting to be loaded.

The business of T. Sullivan & Co. is steady and strong, this being one of the most active winters in the record of the firm. The yards were full when the snow came and the handling is easier than in some cases.

Business is strong in the yard of the Standard Hardwood Lumber Company, and as soon as there is any weather suitable there will be an increase of the oak and other stock coming up from the South, but there is enough of that for this weather.

Frank A. Beyer has returned from his visit to the mills at Pascola, Mo. He will now be a

county official until the taxes are collected. He found the situation in the western lumber trade very good.

A. Miller is looking after the interests of the Hardwood Exchange and is now calling it together every week, but the business is still largely of a social nature. His yard activity is good for the time of year.

The Buffalo Hardwood Lumber Company still has an office representative in the Southwest looking over the various sawmills that the firm takes the cut of. Together these mills will turn out a big lot of oak and other hardwoods.

F. W. Vetter has gone to West Virginia to look after some hardwoods he has on his list, including a lot of very fine white ash, some of which is already in yard here. There will be more needed, as the sales are large.

This is a very active winter for I. N. Stewart & Pro., who have taken a slice out of a good many other yards to help them fill their orders, which have been much larger for some time than is common at this time of the year.

Manager Hopkins of Scatcherd & Son has made a trip to the Memphis mills of the firm and will now plan his regular winter visit to his orange trees in the Isle of Pines. Business is very brisk, but stock not at all plenty.

Both Hugh and Angus McLean have been in New York of late looking after the sales end of the business. All the southwestern mills of the McLean interests are doing full time, but the market is likely to take all the stock.

President G. Elias of the Lumber Exchange will try to attend the annual convention of the Wholesale Association in Cincinnati and has named J. N. Scatcherd and Knowlton Mixer to accompany him as delegates.

## PHILADELPHIA

Charles K. Parry recently returned from an extended tour of the southern lumber camps and reports conditions the best ever known there. One of the mills in which he is interested has been changed from a timber to a Georgia flooring mill with a capacity of about 50,000 feet per day. He pronounced favorably upon outlook.

Charles G. Blake, manager, E. V. Babcock & Co., states that business is fairly well sustained, considering the limitations of a severe winter. He believes the first of spring will see a brisk advance in trading.

W. S. W. Kirby of the Kirby & Hawkins Company says orders are coming in liberally, but the severe storms have interfered more or less with the delivery of goods. He anticipates sound trading for 1910.

William H. Shippen of Shippen Brothers' Lumber Company, Ellijay, Ga., was a recent visitor among the local trade.

C. H. Wheeler, manager, Summit Lumber & Milling Company, Shanksville, Pa., recently spent a few days visiting his business friends in Philadelphia.

On account of the National Wholesale Lumber Dealers' Association's convention being held at Cincinnati, O., on March 2 and 3, the Lumbermen's Exchange of Philadelphia will postpone its regular monthly meeting to March 10.

The Philadelphia Veneer & Lumber Company held a special meeting at the office of J. H. Sheip, 2026 Land Title building, on February 11, at which the following officers and directors were elected: Jerome H. Sheip, president; Charles H. Kunkel, vice-president; W. Howard Ramsay, treasurer; Stanley S. Sheip, secretary. S. S. Keller and the above named officers compose the directorate.

S. B. Southgate, chief inspector of the National Hardwood Lumber Association, was a visitor to Philadelphia on February 11. He is making a tour of the eastern cities and was on his way to Baltimore.

D. G. Courtney, the eminent hardwood manufacturer of Charleston, W. Va., was a recent visitor to the local trade.

(Continued on page 40.)

THE BIGGEST "DUMP" OF POPLAR LOG

## THE STORY OF YELLOW POPLAR

Illustrations from Photographs by Editor Hardwood Record

### Chapter IV.

The striking picture across the two pages at the head of this article shows the big log "dump" of the Yellow Poplar Lumber Company in Russell Fork, the main stem of the Big Sandy River, in Dickenson county, Va., as it appeared on November 17 last. This dump of logs was in a gorge of the river; was about two-thirds of a mile in length and five hundred feet in width, and contained at that time thirty-six thousand large virgin forest yellow poplar sticks of timber ranging in length from twelve to thirty-eight feet, with an average of seven hundred and fifty feet to the piece, amounting to 81,000 logs of sawmill length. The average diameter of the logs was twenty-five inches, although many of the sticks were from three to six feet in diameter. The total log scale was 27,000,000 feet. Afterwards about 3,000,000 feet more were added.

This dump is located a short distance above the breaks of the Big Sandy, the formidable cleft in the Cumberland mountains, through which the Russell Fork of the Big Sandy river winds its tortuous and rocky way. One-half mile below this dump is located a concrete splash dam, three hundred and fifty feet in length and twenty-five feet in height, through which these logs have since been driven through the breaks to floating water below Elkhorn City, Ky. From this point the logs are rafted and floated to the mouth of the river at Catlettsburg, Ky., and thence to the company's log harbor, where its sawmill is located, at Coal Grove, on the Ohio river. The picture shows the largest assemblage of yellow poplar logs ever made at one point in the history of poplar manufacture, and is a part of the log crop of 40,000,000 feet that this company will cut into lumber during the sawing season of 1910.

A few logs in the foreground are shown lengthwise of the gorge, but from the bottom up they are piled crosswise of the stream. This result was accomplished by means of a Lidgerwood hoisting engine, which carried an endless steel cable across the river at varying points up and down the

stream. The railroad track from which the logs were dumped is in the immediate foreground. The logs are taken off the cars with tongs attached to the lines running across the river, and packed in the gorge like matches in a box.

Incidentally, this picture was made by the editor of *HARDWOOD RECORD* last November and the Yellow Poplar Lumber Company, believing it to be an object lesson in poplar production, has had made from it a large number of handsome prints, fifty inches in length. The photograph was transformed into an engraving which is notable from the fact that it is the largest single plate half-tone ever produced. The picture is printed in sepia-colored ink on heavy plate paper; it is surrounded with an orange border and is studded in the similitude of a photograph. These pictures are being

distributed in mailing tubes to the Yellow Poplar Lumber Company's patrons, both in the United States and abroad, and will form a fine adornment to thousands of lumber offices the world over.

The second illustration accompanying this article shows a Clyde Iron Works Decker loader on the Yellow Poplar Lumber Company's railroad handling the big stock of poplar sticks onto the cars, while the third picture is a trainload of these big yellow poplar timbers being moved down one of the skidways to the log dump.

Cleaning up the poplar timber on an area of 15,000 acres in a single season is no child's play. The company moves its equipment into a virgin forest, establishes camps, commences swamping, erects portable sawmills to cut out materials for the building of its railroads, builds perhaps a half-dozen

LOADING BIG POPLAR TIMBER WITH A DECKER LOG LOADER.

HISTORY OF POPLAR MANUFACTURE.

camp in different parts of its territory, then commences felling, scalping the logs, skidding and transferring the timber to the river. The Yellow Poplar Lumber Company's log crop of 40,000,000 feet, from the very ground up, was accomplished between the tenth of March, 1909, and the first of December of the same year. The work meant, after the woods operations were fairly under way, the loading of logs and the running of trains both night and day for months. The men in the various camps put in long hours. They are called out of bed at 4:30 in the morning, eastern standard time, and are at work felling, scalping and skidding at 5:30, which, during a large portion of the year, means commencing work before daylight, which is continued as long as the light lasts, while the railroad hauling is carried on without interruption. Of course, men working these long hours and at such a furious pace could not stand the labor indefinitely, and therefore most of them get several months lay-off during the year. Again it must be noted that high wages have to be paid to secure men of physical capacity to perform these herculean tasks and work the long hours necessary.

Some of these men have been in the employ 25 cents per man per day; the cost of board

of the Yellow Poplar Lumber Company since they were boys.

This brings up the subject of the cost of poplar production as compared with the cost of an ordinary hardwood or yellow pine timber operation. It must be remembered that nothing but the poplar is taken out of the forest, and this wood constitutes only about twenty-five per cent of the total stand, or perhaps 2,500 feet to the acre.

The Yellow Poplar Lumber Company reports that in 1899 it paid four-mule-team drivers \$20 per month and board; the present season it is paying \$40 a month and board.

During that same year the average tram haul was five miles; last year the average haul was twelve miles.

In 1899 the average price paid per bushel for shelled corn at the nearest railroad point of delivery to the operations in Virginia was 44 cents a bushel; during the past year the cost of corn at Elkhorn City, Ky., the closest railroad station to the company's operations in Virginia, was 90 cents a bushel.

The price of supplies in 1899 enabled the company to board men in its log camps at

the past year was more than 50 cents per man per day.

In 1899 the company bought its mules f. o. b. cars at Lexington, Ky., at \$120 a head; the present equipment of mules cost the company \$240 per head f. o. b. cars St. Louis. As this operation required the use of 128 head of mules, it will be seen that the difference in cost is no insignificant amount. Furthermore, the pay roll of the company's woods crew showed 518 men on the list. Thus it will be seen that the difference in labor cost was no inconsiderable sum.

Furthermore, the company's records show that the cost of constructing wooden tram roads in 1899 was \$1,700 per mile; during the past year the cost of construction has gone up to \$2,500 a mile.

Ten years ago the timber of the Yellow Poplar Lumber Company was put into streams that had good driving water; this year the concern has been obliged to spend a monumental sum in the erection of an immense splash dam to get logs out of the minor streams into floating water. This has been brought about by the scarcity of poplar along the lower rivers which compelled the company to go to the headwaters of the streams to secure its log supplies. Beyond this the company has spent a large sum of money during the last year in blowing out the immense rocks that have impeded the driving of logs through the rough channels of the breaks of the Big Sandy and in improving the heads of the streams.

Furthermore, the company has found that while the cost of lumber, grain, provisions, supplies and distance hauled have greatly increased, the efficiency of labor has decreased, making the added cost of production even more pronounced.

Another thing that has contributed largely to the high cost of poplar is the advancing price of stumpage. In 1899 the average price paid for poplar trees, 24 inches and up in diameter at stump height, in the Virginia and Kentucky country, was \$4 per tree; the present price for 20 inch and up timber, in the same locality, is \$10 per tree, and there is no large quantity to be secured even at this price.

Considering the remarkable physical qualities of yellow poplar lumber and the extraordinary sizes in which it can be obtained, the surprising thing is not the high price of the lumber, but the remarkably low price at which it can be produced and sold at the present time.

MOVING A TRAIN OF POPLAR LOGS TO A DUMP

(Continued from page 37.)

Daniel B. Curll, yellow poplar and hardwood lumber, has on hand 4/4 No. 1, or panel chestnut, 18 to 36 inches wide, of which 70 per cent measures 14 and 16 feet long, a most unusual run of this wood. It took two years to gather it.

A large body of eastern lumbermen will attend the next annual convention of the National Wholesale Lumber Dealers' Association, which will be held at the Sinton hotel in Cincinnati, O., on March 2 and 3. Philadelphia is arranging for a special carload; a full car of Baltimoreans is promised, and reports from New York are to the effect that two cars will be needed to transport the Knickerbockers. A great deal of enthusiasm is manifested throughout, and from all indications this will be the biggest meeting ever held by the association.

The small desk calendar in its frame of fine leather, presented as a souvenir to his friends by Daniel B. Curll, Real Estate Trust building, is much appreciated by the recipients for its artistic simplicity and utility.

The annual report of the J. G. Brill Car Company, recently made public, shows the net profits for the year 1909 to have been \$130,784, as compared with \$90,740 in 1908 and \$1,368,949 in 1907. Gross business for the year of \$4,261,204 showed a slight increase over the previous year, but fell more than 50 per cent below the record year of 1907. Orders on hand February 1 amounted to \$2,755,776, an increase of \$1,033,438 as compared with December 31, 1908.

It is stated that orders now on hand at the Baldwin Locomotive Works are sufficient to keep the present force of 11,000 men busy for the next four months. For the last two months the same number of men have been employed.

Fire destroyed the lumber yard and planing mill of Joseph M. Mills on River road, West Manayunk, on February 4. The loss is estimated at \$200,000.

Fire recently burned out the three-story furniture and cabinet factory of the Kaufman Manufacturing Company, 710 Percy street. The loss is estimated at \$10,000.

The large carriage works of Hahn Brothers, Hamburg, Pa., including over 100 vehicles, a large quantity of lumber, office and packing building, was destroyed by fire February 4 at a loss of \$60,000.

Charles B. Sherron, a carriage manufacturer, died February 8 at the age of eighty-one. Mr. Sherron was a member of the National Carriage Builders' Association and the publisher of "American Vehicles," a journal devoted to the carriage business.

Creditors filed a petition in the United States District Court to have the T. De Long Furniture Company, of Topton, adjudged an involuntary bankrupt. The petitioners and their claims are: George M. Spiegle & Co., \$910.14; Vermont Marble Company, \$63.50; Pittsburg Plate Glass Company, \$1,047.80.

The Haddock Lumber Company, Wilmington, Del., obtained a charter under Delaware laws February 2. Its capital stock is \$500,000.

The Atlantic Timberland Cooperation Company, New York, was recently incorporated with a capital stock of \$400,000.

The H. F. Sailor Boat Building Company, Ocean City, N. J., was incorporated February 10 under New Jersey laws, with a capital of \$10,000.

The Dietrich Motor Car Company, Wilkes-Barre, Pa., obtained a charter under Pennsylvania laws February 11; capital, \$10,000.

The West Philadelphia Carriage & Wagon Company, Philadelphia, was incorporated under Pennsylvania laws February 11 with a capital of \$20,000.

The Flat Automobile Company of Pennsylvania, Philadelphia, was recently organized with a capital of \$20,000.

The Corry Timber Company, Corry, Pa., obtained a charter February 15 under Delaware laws; capital, \$1,000,000.

The Silent Motor Car Company, New Kensington, Pa., was incorporated under Delaware laws February 18 with a capital stock of \$300,000.

## PITTSBURG

The Breitweiser & Wilson Company is making rapid headway at its temporary headquarters in the Lewis block and during January showed a fair lot of sales. Its officials are hustlers and its hardwood connections are bound to put it right to the front in a short time.

The Palmer & Semans Lumber Company has decided to remain at Uniontown, Pa., with its headquarters until about April 1. I. F. Balsley, sales manager, is on the road most of the time making new connections.

J. W. Hulse, office man of the McDonald Lumber Company, is away this week on quite an extended trip through the South and Southwest. This concern has moved a large amount of lumber since the first of the year, much of it being lath stock.

William R. Cornelius is lining up the situation with a view to extending his operations. His hardwood connections in West Virginia and other southern states are such as to make him a very successful bidder for high-class hardwood properties.

O. E. and W. P. Booth of Washington, Pa., are extensively engaged this winter in buying walnut timber. Their largest purchases have been near Finleyville, Pa., in the Pan Handle district, west of Pittsburg.

The American Lumber & Manufacturing Company is getting all its forces ready for a big spring's business. President Johnston, who recently returned from a long trip through the South, views the hardwood situation very favorably and looks for some splendid business when the weather permits.

Magnus Cluston of Lock Haven, Pa., has just completed one of the biggest jobs of the season for the Goodyear Lumber Company on Medix Run, Pennsylvania. Since last May he has been working eighty-five men and about forty teams and has cut 8,000,000 feet of logs, 13,000 hardwood ties and has peeled, hauled and piled 3,600 cords of bark.

The J. L. Lytle Lumber Company is getting its full share of business in Ohio and the Middle states. President Lytle reports matters this month pretty dull, which is a common statement with most wholesalers in this city.

The Southern States Lumber Company is the latest corporation to be formed by the Flint, Erving & Stoner interests of Pittsburg. The members are E. H. Stoner, R. H. Erving and W. H. Donner. The concern will have big lumber interests in the South.

The Goodwin Lumber Company, under the management of E. H. Shreiner, made a record-breaking total in its January sales. Its business has been coming up steadily during the past year. Mr. Shreiner has been keeping his eye closely peeled for any good hardwood stocks in West Virginia that would put him into the market at the right time.

J. L. Kendall, president of the Kendall Lumber Company, has gone West to look over the firm's big timber operations there. Secretary J. F. Henderson reports that business is good and that with the exception of deep snows, which have stopped practically all the mill operations, the company has been very busy.

The Fredonia Planing Mill Company, capital \$15,000, is a new concern at Fredonia, forty miles north of Pittsburg. Its members are Jonas A. Baker, W. H. Reisher of Fredonia, and C. C. Conkle of Pittsburg.

The W. P. Craig Lumber Company has taken larger offices on the tenth floor of the Empire building and is branching out in other ways. Its shipments since January 1 have been large and regular and all its mills are pounding away at a brisk rate.

The Linehan Lumber Company is convinced that when lumber business fairly starts this spring it is going to be a "hummer." There is no question in their minds but that choice hardwood will bring a much higher price on an aver-

age this year than last and it is getting its stocks in line accordingly.

W. W. Dempsey, the big wholesaler of Johnstown, Pa., has bought a large interest in the planing mill business of L. C. Purvis & Co. at Butler, Pa. The new company will be known as the Purvis Planing Mill Company and extensive improvements will be made to the plant.

Pittsburg councils have taken up the matter of immediate action on the big municipal improvements provided for in the recent bond issue of \$6,750,000. The first among these will be the removal of the hump. Notices have already been issued to sixty property owners in the hump district to tear down all or such parts of their buildings as are in the way of the proposed improvement. The Pittsburg Civic Commission has appointed an expert engineer to oversee all spending of the city's money on this project, and if a suit recently instituted by an Ohio lady to test the legality of the bond ordinance fails, as it is likely to do, work will be under way by April 1. This means a large amount of lumber to be bought from Pittsburg wholesalers and adds greatly to their feeling of confidence in Pittsburg's ability to buy and consume a record-breaking lot of lumber in 1910.

## BOSTON

Frank W. Lawrence of Lawrence & Wiggin, Boston, has been making an extensive trip through the South and West this month.

Morris A. Hall of the Hall Lumber Company, Boston, and J. M. W. Hall have been on a trip to Vancouver, where they have large timber holdings.

The Lumber Trade Club of Boston held its annual meeting at the Hotel Bellevue, Boston, Thursday evening, February 10. The officers elected for the year were: President, Walter E. Chamberlain of J. M. Woods & Co.; first vice-president, Edward S. Tenney of the A. T. Stearns Lumber Company; second vice-president, Herbert F. Hunter of the Palmer-Hunter Company; secretary and treasurer, J. E. F. Downes of the Downes Lumber Company; executive committee, E. D. Sawyer, George W. Curtis and J. C. Murphy.

William E. Litchfield, the well-known hardwood dealer, returned last week from a western trip. While away he spent a few days at the mill of Litchfield Brothers, North Vernon, Ind.

Harry C. Philbrick, who has been making a trip in the South, returned home about two weeks ago.

The Shepard & Morse Lumber Company of Boston has taken new quarters on the second floor of the new Boston Safe Deposit building, at the corner of Franklin and Devonshire streets.

George E. Stone of the Stone Lumber Company, Boston, is expected home from a trip around the world about March 1. Mr. Stone was accompanied by his family. He arrived in California early in the month and has been spending a few weeks with his brother, whose home is there.

Charles C. Batchelder of the Boston Lumber Company is abroad. He has been away several weeks and it will be several more before he returns to Boston.

Wendell M. Weston of the W. M. Weston Company, hardwood dealers, Boston, returned about the middle of the month from a western and southern trip.

The Massachusetts Wholesale Lumber Dealers' Association held a meeting at Young's hotel, Boston, Wednesday evening, February 9. The chief guest and speaker of the evening was the Rev. Thomas Van Ness, who spoke of trade conditions in Germany and England. Several matters of importance were brought up. Resolutions against the corporation tax were adopted and it was voted to send copies to the Massachusetts members of Congress. A committee on the count and sale of shingles reported and asked for further time, which was granted.

The George W. Gale Lumber Company, Cam-

bridge, Mass., has recently purchased a large automobile truck for the carrying of lumber. The company is planning to purchase two more and do away with the carrying of lumber by horses.

The firm of L. O. & E. S. Davis, Meriden, Conn., is to dissolve partnership. E. S. Davis will dispose of his interests to his brother, Lewis O. Davis.

The W. A. Fuller Lumber Company, Leominster, Mass., has purchased a tract of vacant land near its present yard and will use the new property in connection with its business.

I. P. Fears' Sons have opened an office in the Savage block, Rockport, Miss., for the sale of lumber. The company has a yard in another section of that place.

The Taylor & Goodwin Company, Haverhill, Mass., is building a large shed for the storage of lumber at its yard in that city.

## BALTIMORE

R. E. Wood and H. L. Bowman, of the R. E. Wood Lumber Company, have returned from an extended trip in the South, where they visited a number of mills and made a study of trade conditions at close range. The journey was made in the interests of business as well as for recreation. They found that the mills have had a good run this winter, being very little interfered with by the weather in the South. In spite of this steadiness of operation, however, there were no large accumulations of stocks, and prices, as a rule, were firm. Lots of lumber were taken up here and there, but in numerous instances Messrs. Wood and Bowman concluded that the prevailing hardwood trade conditions hardly justified them in meeting the figures of the producers.

The Eisenhauer-MacLea Company, a large part of whose fine stock of hardwoods and yard was destroyed by fire on February 2, has opened a temporary office on the southeast corner of Central and Eastern avenues, and is going right ahead to assemble a new stock. The wreckage will be cleaned up as soon as the insurance can be adjusted, and the yard buildings will be replaced.

Albert Wagenmann of Luschka & Wagenmann, Ltd., Mannheim, Germany, was a recent visitor here. He was looking for poplar logs and white oak lumber, and called on several of the local exporters.

State Forester F. W. Besley has submitted his report to Governor Crothers. In it he states that the work of surveying Maryland's timber resources has been completed in eighteen out of the twenty-three counties, and that forest conditions in eight counties have been carefully studied, and detailed forest maps and working plans made. Observations as to bettering the methods of forest management are added. Mr. Besley reports: "Under present conditions, through wasteful and injudicious methods, of cutting and as a result of repeated forest fires, our woodlands are deteriorating, so that they are producing but one-third to one-fourth of what they are capable of doing under proper and reasonable management." The state owns four forest reserves aggregating 1,957 acres, which have been placed under systematic management as an object lesson.

E. P. Gill of Wm. D. Gill & Son; Theodore Mottu of Theodore Mottu & Co., and Rufus K. Goodenow of the Canton Box Company, have been appointed delegates to represent the Baltimore Lumber Exchange at the annual meeting of the National Wholesale Lumber Dealers' Association in Cincinnati.

## CLEVELAND

Several Cleveland hardwood lumber dealers take exception to the action of the Hardwood Manufacturers' Association's new rate list, which raises the prices on grades of poplar used in

manufacturing. One of those to criticize the new schedule is E. L. French of W. A. Cool & Son, who says that it does not seem warranted at this time and that the increase will do more to injure business than to improve it.

Henry R. Cool is at present traveling in Mississippi looking over the lumber lands in that state. His father, W. A. Cool, is at Southport, N. C., where the company owns 13,000 acres of timber lands, which are rapidly being developed.

Samuel E. Barr of the Lilly Lumber Company of New York City and B. W. Ackles, secretary of the Alton Lumber Company of Buckhannon, W. Va., were among this week's visitors to Cleveland.

H. A. Hulburt, who has filed a petition in bankruptcy, has been connected with a number of lumber ventures here. He first appeared with a concern known as the Lumber & Timber Manufacturers' Agency and later headed a firm which bore his own name. More recently still he merged with F. W. Wiggins as the Forest City Lumber Company and took over the yards of the Richardson Lumber Company in the East End. Now he is asking to be adjudged a bankrupt by the courts.

George E. Meier, manager of the Interstate Lumber Company, has been named as receiver for the Lakeview Lumber Company, Euclid avenue and East Eleventh street. The liabilities of the concern are about \$6,000. The concern was started about a year ago by E. W. Hatch and has never done a very vigorous business.

The hardwood yard of C. N. Boyce at Somerset, Ky., has been taken over by the C. H. Foote Lumber Company of Cleveland. Mr. Boyce is now engaged in the lumber business at Jefferson, O. The Foote company intends to enlarge the plant and extend the business as rapidly as consistent with the output. The stock which is being carried at present consists of oak, poplar, ash and chestnut.

Officers of the recently organized Putnam Lumber Company have been chosen as follows: J. W. Wagner, president; J. M. Diver, vice-president; S. E. Putnam, manager and treasurer; E. C. Barro, secretary, and P. H. Wagner, assistant secretary. The company has taken over the business of the late firm of Putnam & Savidge.

The Peerless Motor Car Company, one of the biggest manufacturers of automobiles in the county, has announced that it will build a body-shop this summer, thereby increasing its facilities for turning out auto bodies. This will create another depot for wide, clear poplar, which is in such keen demand by the auto manufacturers here.

The Big Four railroad is contemplating the erection of an immense freight depot in the flats this summer, and some of the big lumber yards in the neighborhood are wondering just what the outcome will be. Unsuccessful attempts have been made to buy some of this property, as the lumber concerns do not desire to move. The railroads threaten to condemn, but this is unlikely. If the big freight yards and depots are a reality it will assist materially in the shipment of lumber, much of which is now coming from southern points by rail instead of by the old lake routes.

The hardwood business of the Advance Lumber Company is reported by that concern as being in good shape. The total output of its mills is being marketed with but little trouble. The hardwood business, in fact, shows the best tone of any branch of the market in this territory, according to Manager Christy.

Extensive remodeling is being done at the plant of the Mills-Carleton Company. New machinery, including several new matchers, is being installed and various other changes are being made. E. G. Carleton of the Mills-Carleton Company at present is spending his vacation in Florida.

Clyde Klumph, salesman for the E. T. Peitch Lumber Company, who is a sergeant in the Cleveland Grays, left during the past week with

that organization on its trip to Mexico. He will be off his regular beat for several weeks.

There is at present being waged in Cleveland a campaign to raise \$500,000 for a new Y. M. C. A. building. John D. Rockefeller started the list with \$100,000. Prominent among the members of the committee in charge of the movement are C. H. Prescott of the Saginaw Bay Lumber Company and J. J. Wemple of the Ohio Sash & Door Company. The Saginaw Bay Company contributed \$1,000 to the fund. A similar sum was given by A. and A. R. Teachout, sash and door manufacturers. Little difficulty is expected in raising the entire sum.

K. V. Hobart of the Hobart Lumber Company of Boston, Mass., called on the local trade during the past week. He left here for a trip to Michigan, after which he will tour the South.

## COLUMBUS

Upon the application of the J. J. Newman Lumber Company of St. Louis the Holly-Mathews Manufacturing Company of Sikeston, Mo., and the C. T. Nelson Company of Columbus, Albert H. Collard was appointed a receiver for the Columbus Wire-Bound Box Company. The receiver gave bond and continued to operate the factory.

E. Doddington reports a fair run of orders, in spite of the unfavorable weather conditions, which have prevailed for some time.

A. C. Davis, president of the A. C. Davis Lumber Company, reports a steady market with several lines of hardwoods showing considerable strength. He says that railroads are caring for lumber shipments better and that the movement is freer. He reports a general disposition on the part of factories to buy if they are in need of stock while the yard trade is slow. Prices show a disposition to stiffen.

George B. Jobson, secretary of the A. C. Davis Lumber Company, returned recently from a two weeks' business trip through a number of southern states.

J. G. Hughes of the P. Smith Sons' Lumber Company of Newark, Ohio, was a caller on a number of wholesalers last week.

The executive committee of the Ohio Shippers' Association is fighting to oppose the enactment of the Woods bill, which provides for the merging of the present Ohio Railway Commission with the proposed Public Utilities Commission. Lumbermen of the state which affiliate with the Ohio Shippers' Association believe that the laws governing the Ohio Railway Commission as it is now organized should not be changed. The shippers are supporting the Ervin bill, providing for enlarged powers of the Ohio Railway Commission.

L. B. Schnieder of the John R. Gobeys Lumber Company reports an unchanged market in hardwoods. He says prices are holding their own and that demand is good when the condition of the weather is taken into account.

At the annual meeting of the stockholders of the Acorn Lumber Company, A. B. McKean was elected president and general manager and C. A. Beckett secretary-treasurer. The office of the company was recently moved from East Rich street to Rich street and the Hocking Valley tracks, where two offices were held.

Daniel Snider was elected president of the J. J. Snider Lumber Company at the annual stockholders' meeting held recently. James Detmeyer was elected vice-president and James E. McNally secretary-treasurer. These officers, with J. W. Reynolds and John Sowers, constitute the board of directors.

The General Lumber Company will soon install a 150 horsepower engine and two new boilers at its mill at Ashland, Ky. Formerly the plant was run by four boilers and engines, but now greater economy can be secured by combining several of the engines. The company has been busy during the winter cutting logs on the timber tract on the Big Sandy river and as soon as it is con-

sidered safe the logs will be floated down to the mill.

H. C. Buskirk of the General Lumber Company recently returned from a week's trip through Kentucky and West Virginia. H. W. Putnam, president, reports a steady demand from manufacturing establishments for hardwoods. He says prices are firm. J. C. Burns, superintendent of the mills and timber tracts, together with several of his assistants, have returned to Ashland, Ky., after consulting with the officers of the company in Columbus.

H. W. Collins, manager of the central sales division of the W. M. Ritter Lumber Company, reports a steady market for all varieties of hardwoods. He says orders are coming in satisfactorily and that the month of February to date has been good. Prices remain stiff. F. B. Pryor, manager of the western sales division, and A. L. Gilliam, manager of the eastern sales division, located at Chicago and Philadelphia, respectively, met with H. W. Collins of the Columbus office February 12 in the usual monthly meeting. Both managers reported a nice run of orders with bright prospects for the future.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, reports a satisfactory business, especially from factories. He notes some improvement in the demand from dealers.

Lumbermen in central Ohio, especially those interested in Southern tracts, have received an announcement of the rivers and harbors appropriation in the House of Representatives, which allows \$2,500,000 for the improvement of the Ohio river during the coming year. Many lumbermen are interested in the project to secure a 9-foot stage in the Ohio river from Cairo, Ill., to Pittsburgh all the year around.

The Portage Lumber Company of Akron, O., was incorporated recently with a capital stock of \$20,000 by a number of Akron men. K. H. Hays is one of the backers of the new company.

The firm of H. J. Reinhard & Co., wholesalers of Columbus, has removed to Winton Place, near Cincinnati, where it conducts a wholesale yard. Hardwoods is one of the chief stocks it handles.

W. L. Whitacre of the lumber company bearing his name is on a business trip through Ohio.

The New Ohio Furniture Company of Columbus was incorporated with a capital stock of \$10,000 by George H. Booth, Edgar J. Oberting, J. F. Sullivan, John J. Sullivan and Herbert Rarey.

C. B. Weakley, superintendent of the operating department of the W. M. Ritter Lumber Company, recently attended a meeting of creditors of the Holland Veneer Company at Holland, Mich.

The DuBois & McCoy Lumber Company of Bellaire, O., was incorporated with a capital stock of \$20,000 by W. E. Harvey and others.

The W. M. Ritter Lumber Company has broken ground for the erection of a 100,000-foot capacity mill at Proctor, N. C. It is expected that as soon as the mill is completed the name of the postoffice at that place will be changed. The mill will be of the double-band variety and will be equipped with a planing mill and all other apparatus.

The Imperial Lumber Company of Columbus has been incorporated with a capital stock of \$50,000 to develop certain timber lands in the South. The incorporators are John A. Ford, G. S. Furheson, Robert Brown, M. C. Welsh and N. Snyder. Sherwood D. Morgan of the firm of Kile & Morgan is one of the backers of the concern. The plans of the new company will be announced later.

The Jacoby-Delaney Lumber Company of Hamilton, O., has been incorporated with a capital of \$10,000 by H. C. Jacoby and others.

At the annual meeting of the Portsmouth Veneer & Panel Company the following officers were elected: A. T. Holcomb, president; George Mathews, vice-president; John Lange, secretary, and W. S. Walker, general manager and treasurer. These officers, with U. A. Swisshelm, constitute the board of directors.

The shippers of Ohio and the railroads doing business in the state will get together in their effort to have the Railway Commission approve the new set of car service rules, which will become effective April 1 over intra-state shipments. The rules have been approved by the Interstate Commerce Commission and are satisfactory to shippers and receivers generally. The rules provide for an average plan of demurrage. It is desired by all shippers, including lumber jobbers, to have the same rules apply over interstate and over intra-state shipments.

Col. James Kilbourne, head of the Kilbourne & Jacobs Manufacturing Company, reports a large number of orders and excellent prospects for the future. The company is one of the largest manufacturers in the country of many wooden articles and consumes a large amount of hardwoods. At the annual meeting James Kilbourne was elected president and general manager; Felix A. Jacobs, first vice-president; James R. Kilbourne, second vice-president; Fred W. Hubbard, secretary; Frank C. Eaton, treasurer, and Joseph D. Potter, auditor.

### CINCINNATI

The "Woodpeckers' Table" was inaugurated at the Business Men's Club at the noonday lunch on Saturday, February 19. A large number of the local lumbermen are members of the Business Men's Club, and a special table has been arranged in the large dining hall on the seventh floor, over which is suspended the sign "Woodpeckers' Table." At this table every noon hour will be gathered such of the lumbermen as call for their lunch and all affairs of interest to them can be talked over while enjoying the noon meal. At the inaugural dinner were Cliff S. Walker, Clinton Crane, W. A. Bennett, Lewis Foster, Thomas J. Moffett, John Heberger, Max Kosse, E. M. Sprague, George Littleford, Stuart Menzies, C. M. Clark, B. F. Dulweber, W. S. Sterrett, Dwight Hinckley, E. J. Thoman, W. E. Delaney, W. J. Eckman, Frank L. Scott, H. J. Pfister and G. S. Stewart. Besides these there are a number of lumbermen members who were absent from the city, but who will always be found at the "Woodpeckers' Table" at the noon hour. This opening lunch was a most enjoyable occasion; several informal talks were given by those present and also numerous toasts. Lewis Foster was elected chief game warden, with B. F. Dulweber and Clinton Crane as assistants. Col. S. Stanberry was chosen sergeant-at-arms.

Washington's birthday was observed by nearly all the downtown offices closing at noon. The headquarters of the Hardwood Manufacturers' Association also closed. The mills and the lumbermen in the outskirts put in a full day at hard work, owing to the wretched condition of outside operations caused by the weather.

The heavy weather of the present winter is said to have been without precedent in the history of the valley. More snow has fallen and traffic has been interfered with to a greater extent than ever before recorded.

Cincinnati is to have a new passenger depot in the not very distant future. Council and the business organizations have taken up the union depot project, owing to the fact that the numerous railroads centering here could not get together. Council will pass an ordinance declaring a new depot necessary and will condemn the property necessary for the depot and the right of way, and a company of capitalists stand ready to put up the building and rent the depot to the various steam and electric roads entering the city.

### INDIANAPOLIS

The C. S. Jones Lumber Company has succeeded the Greensburg Lumber Company, an old established concern at Greensburg.

A number of improvements are being made at

the plant of the Indiana Veneer & Lumber Company of this city.

A factory for the manufacture of screens and mission furniture is being established at Marion by James F. Townsend, who will operate under the name of the Marion Furniture & Screen Door Company.

The Webb-Gordon Furniture Company has been incorporated with an authorized capitalization of \$10,000 at Greenfield by J. F. Webb, G. W. Gordon and W. C. Welborn. It will take over the factory of the Comstock-McKee Furniture Company.

A farm of 428 acres near Palmyra has been purchased by the Wood-Mosaic Company of New Albany for the timber it contains. After the timber is removed the farm will be sold. The price paid was \$25,000.

Beech Grove, a new railroad town adjoining Indianapolis on the southeast, is to receive the benefit of the expenditure of \$1,000,000 by the Big Four Railroad Company at that place. Twelve new buildings will be erected, including a coach shop, dry kiln and a two-story planing mill.

The Talge Mahogany Company has just received 100 car loads of mahogany logs from the west coast of Africa via rail from New Orleans. This is the largest shipment of the kind ever received in Indianapolis, and it is estimated that the logs will yield about 1,000,000 feet of mahogany lumber and veneer. W. H. Day and W. E. Van Talge were in Africa for several months buying the logs direct from the natives employed by the king of the Ashantee tribe. The logs were carried overland by natives to ravines, where during the rainy season they were washed to a stream and carried to the seaport, from which they were shipped to this city. By buying from the natives the middle man's profit that would have had to be paid by buying at Liverpool was saved.

### EVANSVILLE

Walter G. Bass of the National Veneer & Lumber Company of Indianapolis was in the city recently on his way South.

C. W. Talge of the Evansville Veneer Company is in Jackson superintending the erection of his new plant. He expects to have it ready for operation soon.

F. M. Cutsinger of Young & Cutsinger returned this week from a trip to Jackson, Tenn., and other southern points.

Mr. Hobart of Hobart & Co., Boston, was in the city last week.

The Mossman Lumber Company of this city is planning to erect a large band mill in Memphis, Tenn. F. G. Smith, the head of the company, will shortly go to Memphis to look after the construction.

Claude Maley of Maley & Wertz has been temporarily confined to his home owing to a slight illness.

The Tell City Furniture Manufacturing Company, Tell City, Ind., has increased the capacity of its plant by the addition of another story to its main building, the new space to be used as a finishing room.

A new brick plant, 150 by 60 feet, two-stories high, is soon to be erected by the P. H. Reddinger Carving Works of this city. The equipment will be of the most improved type. The new plant, it is said, will be one of the largest wood-carving plants in the country. The company manufactures furniture ornaments of all kinds.

The Hercules Buggy Company of this city has filed articles of reincorporation at Indianapolis and will increase its capital stock from \$300,000 to \$1,000,000. This will give Evansville one of the largest buggy manufacturing concerns in the world. On account of the growth of the business, extensive improvements and advances in value, the prior capitalization did not represent the volume of business.

## MEMPHIS

Announcement is made by F. C. Zupke & Co. that they have opened offices at 442-444 Scimitar building, this city, and that they will engage in the wholesale lumber business for both foreign and domestic account. Mr. Zupke will have charge of the business of the firm. He was, until recently, second vice-president of the Darnell-Taenzler Lumber Company. Prior to his connection with this firm he was one of the stockholders in the old firm of E. E. Taenzler & Co., Inc. He has had twenty-four years' experience in the lumber business, both at home and abroad, has traveled extensively and is thoroughly familiar with the requirements of the markets both in America and Europe. The firm has only been recently organized and began business February 15.

The Moffett-Bowman Lumber Company, with headquarters at Madison, Ind., has broken ground for a hardwood mill in this city, which will have a capacity of 40,000 feet per day. The mill is to be located in South Memphis, where a tract of a little more than five acres has been secured. The main buildings will be fireproof and the most improved machinery will be installed. The firm hopes to have this plant in operation within less than ninety days. The headquarters of the company will continue at Madison, but, as in the case of a number of other northern firms, the mill will be located in Memphis in order that it may have its plant closer to the base of timber supply.

The Perkins Lumber Company, which has a capital stock of \$25,000, has been organized here. The company will buy and sell lumber at wholesale, but the management states that later a sawmill may be erected here. H. E. Perkins, Frank Calville, H. F. Harwell, E. C. Perkins and L. E. Brown are the principal incorporators.

The Michigan-Arkansas Lumber Company has received the machinery and equipment for the band mill which is being erected at Nettleton, Ark., and work on the plant is now being rushed. The capacity will be 40,000 feet. The company owns between 4,000 and 5,000 acres of timber land, and in order to prepare facilities for its development it has already built several miles of railroad connecting with the St. Louis, Iron Mountain & Southern. The engine and machinery for the plant are now being placed.

Machinery for the box factory recently located at Hope, Ark., has arrived and it is now being installed. The plant will be used for the manufacture of box shooks and will have a capacity of 15,000 feet.

The Mercantile Lumber Company has purchased a tract of land in one of the suburbs of Jackson, Miss., paying therefor \$6,500. It proposes to erect a lumber plant and ice factory on this property, representing an investment of about \$50,000. It will employ between sixty and seventy-five men.

The Mississippi Valley Transportation Company has had officials here during the past few days investigating a site for adequate dock facilities and river terminals. They have not definitely decided upon any location, but they state that they propose to have everything ready at Memphis, St. Louis and New Orleans before the actual service is inaugurated. They estimate that it will require the expenditure of several hundred thousand dollars to meet the requirements of the situation here, and state that service will begin not later than August or September of this year, as some of the boats are already being constructed. Some of the lumbermen here are stockholders in this company and are very much interested in the movement because they believe that heavy traffic, such as steel, iron and lumber, should be handled by boat instead of by railroad, leaving the lighter and more profitable class of freight to the latter. Lumbermen here have been strong advocates of the deepening of the Mississippi and they believe that the establishment of a successful carrying business on this

stream would do more than anything else to forward this movement. Officials of the company state that they do not expect to monopolize traffic, but they have made it quite clear that they will furnish considerable competition for the north and south lines of railroad.

The New Orleans, Mobile & Chicago Railroad Company, the reorganization of the old Mobile, Jackson & Kansas City railroad, has decided to open offices in this city. John F. Ryan has been appointed traveling freight agent and will make his headquarters here. Mr. Ryan is the right-hand man of President Louis S. Berg of the New Orleans, Mobile & Chicago, and his appointment to this position is regarded as significant. The company has a line in operation from Mobile to Middleton, Tenn., and it is seeking an outlet north. It will have no difficulty whatever in entering Memphis for the reason that the line running up from Mobile crosses both the Frisco System and the Southern railway a short distance east of Memphis. Lumber interests will welcome the opening of freight offices here by this road because it will provide another outlet for their shipments of lumber intended for Europe.

It is probable that Memphis will have another north and south trunk line as a result of the reorganization of the Dyersburg & Northern into the Chicago, Memphis & Gulf, and plans for extending the old road, which ran from Tiptonville to Dyersburg, Tenn., a distance of thirty-one miles, northward to Cairo, Ill., via Hickman, Ky., and southward via Memphis and Yazoo City, Miss., to Jackson, Miss. President Latta of the reorganized company is authority for the statement that surveys will soon be made for the northern extension and that plans have progressed to such an extent that the bonds are soon to be placed on the market. He says that the road is to be a water level line from Cairo to Jackson. It is believed that the Burlington System is back of this movement. It has a line of railway practically into Cairo and this will, if extended to that point, make direct connection with the new road. At Jackson, Miss., connection is made with the New Orleans & Great Northern for New Orleans, and this will give a line of railroad running from the extreme Northwest to New Orleans. The Frisco System is also believed to be interested in the movement to some extent. It is stated that the Frisco and the Chicago, Memphis & Gulf will build terminals jointly on the tract which was purchased some time ago by the Frisco System and now being held in trust by former President A. J. Davidson. Since this announcement was made options have been taken on about \$250,000 worth of property by the Chicago, Memphis & Gulf adjacent to that held by the Frisco. It is also suggested that the Frisco System will use the new line from Memphis to New Orleans instead of the arrangement it now has. Construction work on the new line, according to President Latta, will begin not later than September 1, and the road is to be completed within nine months after grading has been finished.

W. A. Matthews & Co. have purchased 8,882 acres of white oak timber near Pine Bluff, Ark., from the Kendall Lumber Company. This is one of the largest tracts of white oak timber land left in the South, and the purchasing company proposes to develop the timber thereon for use in the manufacture of staves and other tight cooperage stock.

Plans are under way for the reopening of the plant of the New South Plow Works at Columbus, Miss., among the largest of its kind in the South. The plant was recently purchased by Messrs. Lundegren and Craig of Ohio. These gentlemen are engaged in the manufacture of buggies in Ohio, and it is stated that they will probably establish a buggy plant at Columbus also. The plow works have been idle for the greater portion of the past two years.

C. A. Stuck & Sons, Jonesboro, Ark., are enlarging their planing plant and sawmill and will spend a considerable amount in improvements.

The Indiana & Arkansas Lumber & Manufacturing Company is preparing to make extensive improvements at Mariana, Ark. Among the number is the building of concrete foundations for its lumber stacks, covering about twenty-five acres. Concrete foundations are becoming more popular for lumber stacks, while some of the lumber manufacturers here are making use of Kaolin as a covering for their yards. The company held its annual meeting a few days ago and the officers and directors express themselves as very well pleased with the results of the past year. The plant of the company at Mariana is under the management of Capt. M. P. Fulton.

The Franklin Carriage Company, according to dispatches received here from Jackson, Tenn., will be sold at the office of the company to satisfy the creditors. For some years this company was very successful and paid handsome returns on the investment. The management, however, is unable to finance it further and it will be sold in order that the claims of the creditors may be taken care of.

Max Sondheimer, president of the E. Sondheimer Company, has been out of the city for some time. At the offices of the company, however, it is announced that the mills are going on full time and that business is very good.

The J. W. Thompson Lumber Company has sold its Berclair (Miss.) mill and the remainder of its timber holdings at that point to lumbermen at Greenwood, Miss. It is estimated that there is between 600,000 and 700,000 feet of timber still available.

The Laub-Fish Lumber Company is running all of its woodworking plants and its big band mill at Charleston, Miss. It began work on the railroad between Charleston and Chaney some time ago, but will be able to do little on this until the weather is more favorable. The management reports the outlook as quite encouraging, declaring that the demand is much better and that there is considerable scarcity of dry stock.

George C. Ehemann of Bennett & Witte has returned from New Orleans and other southern points. Mr. Ehemann also reports business as better and the outlook as more favorable.

The Central Arkansas & Eastern Railroad Company has been authorized to extend its line for a distance of thirty-five miles. The first fifteen miles will be built in a southeasterly direction from McGregor, its present terminus in Lonoke county, to Stuttgart, in Arkansas county, while the last twenty miles will extend from Stuttgart in a northwesterly direction to a connection with the Rock Island System in Prairie county. Its capital stock will be increased from \$100,000 to \$800,000. There is a large amount of timber in the section through which the extension will be built and the new line will afford facilities for its development.

## NASHVILLE

An interesting business change of the past few days has been the resignation of Thomas L. Leseuer, president and general manager of the Brown Chemical Company, to become secretary to the W. J. Cude Land & Lumber Company. Mr. Leseuer is not without experience in the lumber business, as for a number of years he was with the well-known firm of Love, Boyd & Co. He is an alert and efficient young business man and his friends are confident that he will achieve still greater success in his new position.

Fifteen thousand finished cedar buckets were completely destroyed by fire the other night at Murfreesboro, Tenn., when the Tennessee Red Cedar Woodenware Company's plant was burned. The origin of the fire is a mystery as the plant had not been running for over a week. About \$27,000 insurance was carried. The plant will be replaced in the near future. This plant was the largest of the kind in the world. It was located about three-quarters of a mile from the central part of the city and owing to the slick and sleety condition of the streets the fire department was slow in getting to the fire. The

plant was formerly owned by the Prewitt-Spurr Manufacturing Company, but was recently sold to J. M. Overall, W. W. Vaught and W. L. Patterson, all of Murfreesboro.

Nashville, in the death of W. K. Phillips last week, lost another of its most useful citizens, a man like John B. Ransom who was prominently identified with the most progressive business interests of the city, and one interested in several big lumber concerns here. Mr. Phillips died suddenly in Florida while there for his health. He was vice-president of the Nashville Hardwood Flooring Company, a director in the firm of John B. Ransom & Co., a director in the W. J. Cude Land & Lumber Company, a director in the Fourth National Bank, president of the wholesale grocery firm of Phillips-Trawick Company, a director in the Cumberland Telephone and Telegraph Company, a director in the Carnegie Trust Company, and was interested in other prominent business concerns. His funeral was attended by many prominent lumbermen and other business men and was one of the largest seen in Nashville for many a day.

A committee of stockholders of John B. Ransom & Co., Nashville Hardwood Flooring Company and the W. J. Cude Land & Lumber Company, has adopted strong resolutions on the death of Mr. Phillips. This committee was composed of A. B. Ransom, J. B. Ransom, Jr., Walter Keith, J. W. Love, and R. T. Wilson. The Fourth National Bank also adopted similar resolutions upon his death.

In the removal of George C. Brown & Sons to Memphis, Nashville has lost one of its prominent hardwood concerns. This firm for some time has had a yard in Memphis and now the headquarters of the concern will be located at the Memphis yards. This firm is a manufacturer of all kinds of hardwoods. Lewis E. Brown will be president, Butler Smith of McMinnville will be vice-president, and G. E. Reynolds treasurer. Attendant upon the removal to Memphis is a reorganization of the company with a capital of \$100,000.

Arthur B. Ransom of John B. Ransom & Co. has recently been elected vice-president of the organization that is raising funds for the erection of the Galloway Memorial Hospital in Nashville, to commemorate the late Bishop C. B. Galloway of the Southern Methodist Church. Already between \$40,000 and \$50,000 have been raised.

A bill has been filed in the United States Court at this city by the Lumber Underwriters, the well known lumbermen's mutual fire insurance company of New York seeking to restrain State Insurance Commissioner Reau E. Folk from revoking the license of the company to do business in Tennessee. Judge Sanford has set the hearing on the application for injunction, for February 26 at Knoxville. The license of this company was recently revoked by the Tennessee Commissioner when the Lumber Underwriters, without the consent of a party suing them, transferred the suit to the Federal Court. The Underwriters claim that this Tennessee law is in violation of the Federal constitution.

W. J. Butts, who has been with the W. J. Cude Land & Lumber Company for some time, has accepted a position with John B. Ransom & Co.

W. J. Cude, after an attack of grippe lasting two weeks or more, is out again.

## LOUISVILLE

"Old Kentucky Home" from now until after the convention of the National Hardwood Lumber Association will be the favorite song of lumbermen. Begin to practice now, for it has been decided and the word has gone forth that on June 9 and 10 Louisville—the Seelbach hotel—will be the refuge of at least a thousand of the faithful. Frank F. Fish, secretary of the association, was the guest of the local Hardwood Club at the meeting February 15. The conven-

tion was discussed informally and C. M. Sears, Barry Norman and Mark Brown were authorized to continue the arrangements for entertaining and completing all details.

Railroad men still hold the floor with the club, in spite of the interest that is felt in the work of the convention. C. C. McChord, former member of the Kentucky Railroad Commission, addressed the members regarding reshipping arrangements in effect on lumber in Louisville as compared with like arrangements at other points.

Mr. Wickliffe of the C. C. Mengel & Bro. Company, who was interviewed by the RECORD correspondent, reports business as "just whooping." January was a splendid month for the firm and, though hard to realize, the company has broken all records this month, though not half over and the shortest month of the year.

C. R. Mengel and D. C. Harris of the same company left recently for Pensacola, Fla., where they are to meet one of their ships that is bringing a cargo from British Honduras. They expect to be gone but a few days. Luckily, the company can get all the cars it needs. It is ordering ahead and one day last week had eleven on its siding; all of the eleven were loaded and shipped by the following evening. It is using its entire yard force to load as many cars a day as possible.

Mark Brown of W. P. Brown & Sons' Lumber Company is busy not only at his work in the office, but also in making arrangements for the convention. Heavy ground is hindering them somewhat in handling, especially as orders are coming in steadily. All the traveling men are seeding in good business and inquiries are numerous.

A. E. Norman was very busy with a customer when the RECORD correspondent called, but found time to say that he is well pleased with business and his appearance proved his words. Although it was raining and sleeting, the yard force was busy doing what they could in the weather, as Mr. Norman put it.

C. M. Sears of the E. L. Davis Lumber Company recently returned from a month's business trip. He is highly optimistic over business conditions generally. He will probably stay at home now for a while to help out on the executive committee of the Hardwood Club, of which he is one of the hard-working members.

Barry Norman, president of E. B. Norman & Co., has returned from a week's visit to French Lick. He is looking fine and is very busy at his desk, where a bunch of work piled up for him in his absence. The company is going full speed and expects to do a larger business in February than in the preceding month. Mr. Booker is kept going all the time, as the box factory, his department, is shipping and delivering cases as fast as they are turned out.

D. E. Kline of the Louisville Veneer Mills and his son, Harry, when the RECORD man called were busy in the yard and factory. They had just received notice from the railroad company that there were seventeen cars of logs on the track for them. Mr. Kline, although very near the river, prefers to get his logs by rail; he says he finds the logs in better condition than those that come by water and they have fewer defects.

H. J. Gates of the Louisville Point Lumber Company left February 14 for a week's trip through Ohio. Ed Shippen and his two oldest boys, whom he is breaking into the lumber business, were busy in the yard. They have not removed all of the logs received lately from the river, although they are slightly alarmed at the prospects of a flood resulting from the snow that is now in the mountains, combined with heavy rains. Their stock is somewhat broken as a result of the big business of January, and their shipments East are large. Mr. Shippen enjoyed the Cincinnati convention from a business standpoint as well as for the entertainment features. He took some nice orders and looks for a banner year for his concern. Inquiries are coming in fast and they have a number of orders ahead.

The North Vernon Lumber Company is moving

along with the rest of the hardwood people. Mr. Hess said that the high grades are moving better than ever before at this time of the year, but he complains of a lack of business in the low grades.

Mr. Davis, in charge of the lumber department of the Mengel Box Company, reports a splendid business with quartered oak and poplar moving most freely. January was a good month and both branches of the firm's business are gaining every day over the receipts of last year.

The Ohio River Saw Mill Company has all the work that its force can take care of. Collections are improving and inquiries and orders are coming in fast.

The Wood-Mosaic Company, New Albany, is having a fair business. Mr. McLean recently left on a three weeks' business trip in the East.

It is only a matter of time now before the Kentucky and Indiana Bridge Company will either rebuild or put up an entirely new structure. A consultation with expert engineers was held in this city this week and I. G. Rawn, president of the Monon, and C. C. F. Bent, vice-president of the Baltimore & Ohio, were present. The Southern railroad was represented by General Superintendent C. L. Harris. The above mentioned roads own the bridge, having bought it at the time that it went into the hands of a receiver some years ago.

The shipping interests of Louisville are anxiously awaiting the decision of the Kentucky Railroad Commission in regard to the demurrage rules, that have been proposed for Louisville by the Interstate Commerce Commission. The result of the conference with Louisville business men which was held on February 3rd, was to have been announced the 17th, but it is put off again and is expected during the next ten days. The Hardwood Club in connection with the Commercial Club and all shipping men except the coal people, put themselves on record, as being in favor of the rules, and even went so far as to propose to the state commission that the same rules be adopted throughout the state.

D. C. Harris, traffic manager of the C. C. Mengel & Bro. Company, is a prominent factor in the new movement of the Traffic and Transportation Association of this city. The idea is to promote better feeling and knowledge among the shipping interests and the railroad men of this vicinity, and to accomplish this, a nominating committee has been formed of which Mr. Harris is a member, to secure some leading merchant or railroad man to make an address after luncheon, at noon on Tuesday of each week, to be followed by a general discussion among those present. The plan will be given a trial on next Tuesday and very satisfactory results are looked for.

At last the appropriation for the Ohio River is assured. The river gets for the first year, over \$4,000,000, including cash and amount authorized, with the usual maintenance fund and work in some places has already been begun. Locally, the most important feature will be the work of widening the canal. A year and a greater part of the appropriation will be spent in securing the necessary sites and the completion of the plans. The appropriation will give the Tennessee and the Cumberland all-the-year navigation and will open up a territory that, as far as timber and coal is concerned, is still in its infancy. While we cannot have navigation the year round on the Ohio for the present, the appropriation will give us the assurance that the work for a nine-foot stage is moving at last.

The Salesmen's Protective Association is the name of a new organization formed February 10, but the wholesale lumbermen and salesmen, who attended the recent convention of Kentucky retailers. The following officers were elected: President, W. C. Ballard of Louisville; vice-president, W. G. Loyer, of Cincinnati; secretary, R. McCracken, of Cincinnati; treasurer, E. M. Eastland, of Louisville. The membership is composed of about fifty traveling men and wholesalers in the Ohio Valley and the Middle West.

The Kentucky Hardwood Flooring Company

has filed an amendment in the county clerk's office, changing its name to the Louisville Planing Mill & Hardwood Flooring Company, and increased the capital stock from \$75,000 to \$100,000 in shares of \$100 each. The following signed the articles: Olof Anderson, W. V. Sheperdson and M. C. Imords.

The J. T. Morgan Lumber Company, which does a large business in western Kentucky and southern Illinois, is moving its general offices from Paducah, Ky., to Louisville. The change is made owing to the ill health of J. T. Morgan, who has suffered from malaria, during the three years that the office has been in Paducah.

The Teass and Davis Lumber Company, Paintsville, has filed articles of incorporation, with a capital stock of \$10,000. The incorporators are: John W. Teass, Harry Davis and John E. Buckingham. Buying, selling, manufacturing and handling all kinds of timber will be done.

On February 6th fire destroyed the lumber warehouse of J. L. Hilton with \$4,000 worth of lumber. Mr. Hilton carried about \$1,500 in insurance.

Charles Potter, aged sixty-six years, a lumber dealer of Bowling Green, Ky., died in Louisville in a sanitarium, where he had been for the last six months receiving treatment for organic heart disease.

## ASHLAND

The Wright-Saulsberry Lumber Company has closed its mills for a short time, but expects to begin on the steady run in a few days, as it will receive a large amount of timber on the present tides. Business has been very satisfactory and it has loaded out a large amount of boards the past two weeks and received a nice lot of very desirable orders for car stock.

The Ashland Lumber Company is expecting its new carriage at any date and will also make other repairs on its band mill, getting same in readiness for steady running in a short time. The company has considerable timber in the Big Sandy. It advises business satisfactory in its retail and planing mill business.

J. H. Kester of the Southern Hardwood Company advises business very satisfactory. A nice lot of orders have been received for immediate and future shipments.

E. J. Bush, lumberman of Hamilton, Ont., was in our city recently buying several cars of lumber. He advises that business in Canada is good. Prospects for this year are encouraging.

The Whisler & Searcy Company of Ironton, O., is operating its band mill at Farmers, Ky., and loading large amounts of car stock and construction oak. Mr. Searcy advises business encouraging and the receipt of large orders for car oak and oak boards.

The Clearfield Lumber Company of Clearfield, Ky., is operating its mills steadily and has large amounts of stock on hand. It is receiving desirable orders for car and export stock as well as boards. In addition to its saw and planing mills the company operates thirty miles of standard gauge railroad over which it hauls its timber to the mills. The company expects to begin running its plant night and day March 1 in order to take care of the large business for future shipments.

The Yellow Poplar Lumber Company of Coal Grove is making favorable reports as to the orders received and the amount of shipments it is making at the present time. It is operating its mills full time and is looking forward to one of the best years of business ever experienced.

S. M. Bradley, lumber dealer of Morehead, Ky., was a business visitor in our city, calling on our several lumbermen and buying and selling lumber. Mr. Bradley advises business satisfactory and looks forward to a good year's business in all lines of lumber.

Irvin Earl, lumber dealer of Detroit, was a business visitor in our city this week. Mr. Earl advises that the Detroit markets are becoming

very active and that large amounts of stock are moving into the city.

The Teass & Davis Lumber Company has been organized at Paintsville, Ky., with a capital stock of \$10,000. The incorporators are J. W. Teass, Harry Davis and J. E. Buckingham. The company has been organized for the purpose of buying, selling and manufacturing all kinds of lumber. It owns considerable timber and expects to do a nice business during this year.

## ST. LOUIS

A national association of slack barrel staves, heading and cooperage manufacturers was organized here last week at the Planters hotel. J. T. Wylie of Saginaw, Mich., was elected president, and H. C. Whitney of Detroit secretary. About seventy-five representatives of fifteen states attended the meeting. It is planned to take in several kindred associations.

Miss Gladys Little, daughter of Mrs. P. B. Little and the late P. B. Little, president of the Little Lumber Company, of this city, was married on February 2 to J. Gordon Carew of Cincinnati, O. The wedding took place in the afternoon at the residence of her uncle. After the ceremony the bride and groom left for a wedding trip to Cuba.

At the meeting of the board of directors of the Lumbermen's Club of St. Louis, held recently, A. H. Bush, who has been a most capable and efficient secretary for the past two or three years, was reelected.

W. R. Chivvis says there is a fair demand for cherry and walnut. There has been a better movement during the past few days in these two items of hardwood than for several months past.

C. M. Jennings of the Berthold & Jennings Lumber Company says there has been a nice improvement in hardwood lumber recently. Car material, he says, is in quite good request. G. P. Shehan, who has been on a business trip to Chicago, has returned home with quite a nice batch of orders.

A seasonable number of orders is reported by E. H. Luehrmann of the Chas. F. Luehrmann Hardwood Lumber Company. All items of hardwood show a better movement. Red gum in particular is having a satisfactory sale, and Mr. Luehrmann is anticipating a large business when the weather becomes more seasonable.

R. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, who has been in the South on some deals, has returned. Quite a nice business in hardwood is reported by Mr. Page. The hardwood department of the company is becoming more important and from the amount of business being done will eventually become quite a factor in the hardwood trade of St. Louis.

J. G. Ganahl, president of the Fidel Ganahl Lumber Company, has returned from a business trip to several northern points. The company has recently increased its capital stock from \$50,000 to \$100,000 and is planning to acquire several additional retail yards in the city soon.

The volume of business sent in by L. M. Borgess, secretary of the Steele & Hibbard Lumber Company, is quite satisfactory. He was up in Iowa when last heard from.

S. C. Major, a well-known Memphis, Tenn., hardwood lumberman, was a recent visitor here, as was also W. H. Russe of Russe & Burgess, Inc.

George E. Cottrill, secretary of the American Hardwood Lumber Company, reports quite a brisk business. Nearly all the items on the hardwood list are in demand. Prices are firm.

## MILWAUKEE

R. E. James has been made sales manager for W. E. Cooper, Milwaukee, wholesale lumberman, with offices in the Majestic building. Mr. James reports a steadily increasing volume of business.

C. P. Crosby, wholesale hardwood lumberman of Rhinelander, Wis., was a recent Milwaukee visitor.

J. L. Wells, manager of the Girard Lumber Company at Dunbar, Wis., recently called upon Milwaukee friends.

The Wausau Box & Lumber Company of Wausau has taken up the manufacture of step-ladders. About 1,000 ladders have already been put out, and if these meet with a good sale the company will equip its plant for a large production. The company has recently increased its capital stock from \$25,000 to \$100,000.

The sawmill and planing mill of the N. S. Washburn Lumber Company of Sturgeon Bay will be placed in operation at once. The company has a log supply of 250,000 feet on hand.

The headquarters of the Badger State Lumber Company has been moved from Durand to Menominee, Wis.

The Willow River Lumber Company of New Richmond is erecting a new dry kiln.

According to loggers and lumbermen, the present season has been one of the most successful for the logging industry in Wisconsin in several years. Inadequate car service as a result of snow blockades has caused considerable inconvenience.

The South Side Lumber Company of Milwaukee has increased its capital stock from \$30,000 to \$50,000.

The A. S. Trow Lumber Company of La Crosse has sold its abandoned sawmill to Oscar M. Thomas and Oscar Larson, who will tear down the structure. The disposal of the Trow mill winds up the sawmill industry at La Crosse.

The Iron Range Lumber & Cedar Company, a Michigan corporation with \$34,000 capital and \$22,000 interest in Wisconsin, has filed a statement to transact business in this state.

The new plant of the Monico Excelsior Company at Rhinelander has been placed in operation. Excelsior, shingles and box material will be manufactured.

The Spoke, Stave & Heading Company of Spring Valley, Wis., has placed its plant in operation.

The receipts of logs and the shipments of lumber from the port of Washburn were practically doubled last year, according to the figures of D. W. Corning, port collector.

Charles O'Hara of Marinette, Wis., has been made sales manager for the Brown Lumber Company of Chicago, covering Wisconsin, Michigan and Minnesota. His headquarters will be at Ontonagon, Mich.

The new stave factory of the Michigan Hoop & Stave Company of Marinette has been placed in operation. The company's hoop mill is also in steady operation.

The sawmill of the Fish-Johnson Lumber Company at Elcho, with a daily capacity of 25,000 feet, will be placed in operation at once.

Levi Withee of La Crosse, the last of the western Wisconsin logging kings of the old days, recently passed away at the age of seventy-six years. He was widely known in business and public life of the state.

The Underwood Veneer Company of Wausau has been incorporated with a capital stock of \$20,000 by J. W. Bishop, J. A. Underwood and J. M. Smith.

The Racine Manufacturing Company, manufacturers of piano stools and automobile bodies at Racine, has increased its capital stock to \$400,000 and has decided to remain at Racine. Contracts have already been awarded for the erection of the first of the new buildings which will be built this spring to replace the plant destroyed by fire a few months ago.

The Diamond Lumber Company of Green Bay is now putting the steel work into place in the new sawmill which it is erecting to take the place of the plant destroyed by fire last summer. The mill will be strictly fireproof and a modern plant in every respect.

Robert L. Gates, secretary of the John L. Gates Land Company of Milwaukee and son of the millionaire lumberman, John L. Gates, was married at Chicago recently to Miss Mayme Doyle, a stenographer formerly in the employ of the Gates Land Company.

William Crook of Eureka, Cal., an employment agent, has been in northern Wisconsin recruiting woodsmen for service in the far West.

Various improvements are being made at the sawmill of the M. H. Sprague Lumber Company at Washburn. A new engine and resaw are being installed and the capacity of the plant is being increased.

The H. M. Johnston Lumber Company of Baraboo has increased its capital stock from \$25,000 to \$75,000.

Henry Labrie of Rice Lake has taken a two-year contract for logging with the Arpin Lumber Company.

The Monticello planing mill, owned by Wittwer & Urban at Monticello, has been sold to George Bleiler of Postville.

The plant of the Roddis Veneer & Lumber Company of Marshfield is crowded with orders and is in busy operation.

### WAUSAU

The S. W. Miller Piano Company of Sheboygan, will build a new factory in the spring. Plans have been drawn and several factory sites are being considered. At present it manufactures about sixty-five pianos per month.

Herbert E. Cooley, formerly of Fredonia, has opened a cheese box factory in West Bend, and will consume large quantities of elm.

Plans are well under way for the establishment of a wagon factory in Edgerton, the company to have a capital stock of \$50,000. Nels Halverson, superintendent of the Stoughton Wagon Company and owner of several valuable plants, will be in charge. The manufactory will start with about one hundred hands.

The Underwood Veneer Company of Wausau has increased its capital stock from \$20,000 to \$120,000.

The Central Lumber Company will cut 9,000,000 feet of timber this winter east of Knowlton. This company is provided with all modern logging equipment.

J. H. Schepp, will saw out a stock of 7,000,000 feet of hardwood logs at Pine River this winter. He will then overhaul his mill and install new machinery.

The Kiel Furniture Company of Kiel, Wis., has secured permits to erect new buildings valued at \$20,000. One will be a boiler room, one a dry kiln, another a warehouse.

Work has been commenced on the building of the new sawmill of the J. R. Davis Company at Phillips, which will replace the mill destroyed by fire October 20. The plant will be larger than the one burned and modern in every detail.

Because of the high tariff placed on its goods the Gold Medal Camp Furniture Company of Racine will establish a factory in Ontario, Can., where orders for foreign shipment will be manufactured. The company has increased its stock from \$60,000 to \$300,000.

The Crocker Chair Company of Sheboygan is building a four-story addition at a cost of \$8,000.

A load of thirty-four logs, scaling 14,130 feet, was recently hauled by one span of horses at the camp of Geo. Monty near Cranston.

Stimulated by a rising market for all lumber products, logging operations in Wisconsin and northern Michigan are unusually active this winter. The cut will be much larger than for several years.

### MINNEAPOLIS

The Twin City factories are enjoying a splendid run of orders for spring delivery, and prospects for the hardwood trade have never been better.

Most of the wholesalers who depend on contracted stocks for their supply have been out lately looking over northern hardwood supplies. They report that the season has been very favorable for logging and that there will be a larger output of birch, maple and basswood this spring than there was last year. There is an abundance of snow and the recent cold snap has put the roads in good shape. The scarcity and high price of birch has given an impetus to logging where there is good birch timber, but no one fears overproduction in that line now.

C. F. Osborne of Osborne & Clark, the local hardwood wholesalers, has returned from an extended trip through southern territory, where he was looking up supplies for their trade. He traveled to Tennessee, Arkansas, Oklahoma and Texas, and found the hardwood mills all enjoying prosperity and selling their upper grades readily. He says they are getting quite an accumulation of the low-grade stocks, which will cause trouble. The supply of hardwood in better grades in the South he found to be small, and most of it too green to ship.

E. Payson Smith and F. H. Long of the Payson Smith Lumber Company have been in northern Wisconsin looking at some large propositions in the way of hardwood stocks for contracting, but Mr. Smith reports that his company already has a large line arranged for and does not care to increase it much at this time.

F. J. Lang, representing the Wisconsin Land & Lumber Company of Hermansville, Mich., is in the city looking after the Twin City trade. He was prevented by illness from coming at his usual time, during the retailers' convention, but has recovered and is hustling for trade again.

E. H. Broughton, manager of the hardwood department of the Krueger-Powell Lumber Company, has been in Wisconsin territory looking at some stocks offered for sale.

D. F. Clark of Osborne & Clark, Minneapolis, has returned from several days' business trip in Wisconsin.

### SAGINAW VALLEY

The snow has been deep and it came on in the lumber woods before the ground was frozen, which has interfered to some extent with logging. Some operators are winding up, while others will continue cutting and hauling as long as the snow lasts. The output of eastern Michigan this winter is expected to be considerably larger than that of a year ago.

S. L. Eastman of Saginaw, who is also the heaviest stockholder in the S. A. Robinson Lumber Company, operating a new mill near South Branch, Ogemaw county, has purchased the mill, equipment and timber of the Prescott-Miller Lumber Company, near Rose City. C. H. Prescott & Sons being the heaviest stockholders. The deal involves about 10,000,000 feet of timber. This will be cut and railed to the Robinson mill. The Prescott-Miller mill will cut up the stock in its mill yard.

The Cheboygan mills manufactured 6,720,000 feet of hardwood lumber last year. The Embury-Martin and Olds mills are both cutting hardwood at the present time. All the lumber manufactured last season has been sold.

M. D. Olds is operating three camps and has five jobbers getting out logs, which are being hauled to the mill over his new railroad. His road runs south from the mill at Cheboygan, having twelve miles and a half of main line with eight miles of branches. In the spring another branch of seven miles will be constructed.

The machinery in the sawmill of the Michelson & Hanson Lumber Company at Lewiston, which after eighteen years' operation will go out of commission about May 1, has been purchased by Louis Jensen of Salling and will be moved to upper Michigan, where a mill will be put up on lands acquired by Mr. Jensen.

The Batchelor Timber Company's mill at West

Branch manufactured 5,000,000 feet of hardwood lumber last year and is being stocked for a good run the present year.

The new mill of the N. Michelson Lumber Company at Michelson, Houghton Lake, manufactured 300,000 feet of hardwood. Michelson is a new town the company has founded. It has a twenty-year cut of mixed timber and, beside the mill and shingle mill, has a number of business buildings and houses for the help.

The Handy Brothers' new wagon factory to replace the one burned at Saginaw, December 15 last, will be in operation early in March. One hundred men will be employed.

The Mershon-Bacon Company's new hardwood box factory will largely increase the capacity of its plant. The company is doing a very satisfactory business.

The Johannesburg Manufacturing Company recently sold 5,000,000 feet of maple lumber, which goes to the Thomas Forman Company's flooring plant at Detroit.

The new hardwood flooring mill erected by the Hanson-Ward Veneer Company at Bay City is in operation and employs eighty-five hands. The company also erected new dry kilns and warehouse and has a large lumber yard in connection, which is being stocked with several million feet of lumber.

### CADILLAC

There has been no general change in the hardwood market during the past two weeks. The market for maple and birch is strong; soft elm is firm; beech is slow; basswood is not active, and ash and rock elm are quiet.

The recent snow storms in Michigan have impeded freight traffic to a considerable extent, tying up the Northport branch of the G. R. & I. for a week and delaying traffic on the main line and other branches has also handicapped manufacturers in getting out logs, more of which have been cut by the farmers in this vicinity and hauled to Cadillac than for several years. It is estimated that 2,000,000 feet of hardwood logs will be brought into Cadillac on farmers' sleighs this season.

F. A. Diggins, Joseph Murphy and D. B. Kelley of Cadillac and H. A. Beaver of Beaver & Diggins are in Corpus Christi, Tex., on a shooting trip.

Charles T. Mitchell of the Mitchell Brothers' Company writes from the island of Jamaica of a pleasant trip and weather conditions fine. He expects to visit points in Cuba and in the United States before returning home.

There is a general scarcity of box cars in which to load flooring and higher grades of lumber.

The Michigan Shippers' Association, comprising many manufacturers at Grand Rapids and other points in western and northern Michigan, together with representatives from Saginaw, Bay City, Flint, Battle Creek, Kalamazoo, etc., recently had a conference with the Michigan State Railroad Commission in regard to reduced rates to the eastern seaboard. The Michigan railroads refused to make any reduction in the rates, and this movement is to put the question before the Interstate Commerce Commission. It is expected that the state commission will aid the shippers in bringing the question before the Interstate Commerce Commission.

Pellston, Emmet county, a husky city of 2,000 population, ten years ago was a wilderness. Lumbering made the town and still is the means of support to a large majority of its population.

Tindle & Jackson and the Pellston Turning & Manufacturing Company ship large quantities of broom handles. Tindle & Jackson are also interested in the manufacture of lumber and have a thoroughly up-to-date sawmill.

The Pellston Planing Mill Company is a manufacturer of maple flooring, basswood and hemlock siding. There is also a Bogardus Land & Lum-

ber Company, interests which manufacture a large amount of hemlock and hardwood lumber.

The lumber companies at this point have taken an active part in the Western Michigan Development Bureau and are interesting farmers to locate on their cutover lands. This policy has been assumed for a number of years and as the result the back country has rapidly been settled. Fine wheat, oats, corn, potatoes and ordinary farm crops are being raised. Many farms have been paid for with the first crop of potatoes. The outlook for this place is promising.

The Manistee Iron Works Company is increasing its capacity by the addition of a large boiler shop. It will manufacture the Butman boiler, a comparatively new invention that is meeting with favor. This new addition means employment to a large number of boiler makers.

## DETROIT

The Dwight Lumber Company has just completed a handsome addition to its office building. The interior is finished in hardwood with products of the factory. The flooring is the special Dwight brand, while the finishing was also manufactured in the company's plant. The new addition, which is used as a private office, is 17 by 26 feet in size. John Lodge, secretary of the company, reports the factory is very busy just now. He says the demand is much better than it was at this time last year.

John Dudley, Sr., of the Dudley Lumber Company of Grand Rapids, was in town on a business trip this week.

The plant of the Thomas Forman Company had a narrow escape from serious damage by fire last week. The blaze originated in the boiler room, but prompt and effective work by the firemen confined it to that section and the damage was only about \$800. Repairs were rushed and the factory lost no time, resuming operations next morning as usual. This is the second local hardwood plant to be visited by fire during the month, the H. W. Harding Company's plant being damaged to the extent of \$10,000 earlier in the month. New lumber sheds have been erected to replace those destroyed by fire at the Harding yards.

J. M. Clifford, large dealer in hardwoods, looks for a big spring business. "Thirty days after the event of good weather things will be booming in lively shape," says Mr. Clifford. "At present business is very fair and with indications pointing to a boom there is nothing to complain about."

William N. Kelly of the Brownlee-Kelly Company and John Commerford of the Detroit Lumber Company are making a two weeks' trip to Washington, New York and other eastern cities for a vacation both feel that they are entitled to.

William M. Dwight, manager of the Dwight Lumber Company, has been receiving the congratulations of the trade on his address before the Interstate Commerce Commission at Washington recently. His topic was "Milling in Transit," a subject which Mr. Dwight covered very thoroughly in his address.

The Brownlee-Kelly Company of Detroit has bought the entire cut of N. M. DeHass, Skanee, Lake Superior district. It included 2,500,000 feet of dry lumber on the docks and all the stock to be manufactured during 1910. The deal involved over 7,000,000 feet of lumber, of which more than 4,000,000 feet was hardwood. The company has also made other extensive purchases in the Lake Superior district.

John Stump of Armada, Mich., has purchased the band mill formerly owned by M. J. Thiesen at Sibley, a suburb of Detroit, and will remove it to a tract of timber near Imlay City.

Hardwood manufacturers are looking forward to the April meeting of the state association, which will take place at the Hotel Pontchartrain the last of April. No definite date was set, the executive committee waiting to see what dates the Detroit Tigers would play at home before

deciding when the meeting should take place. There are many warm baseball fans among the hardwood men, and if the meeting is held at a time when the Tigers are at home a big attendance is assured.

## GRAND RAPIDS

David W. Kendall, treasurer and general manager of the Phoenix Furniture Company, who has bought the lumber and supplies for this large concern for years, died of heart failure February 16 in the city of Mexico while on a pleasure trip. Mr. Kendall came to this city in 1879. He was a leading designer and has brought out many of the leading finishes used by the furniture manufacturers, such as antique oak, sixteenth century and early English, as well as the colored finishes, such as tobacco brown and forest green. He was fifty-eight years old and leaves a widow and an aged mother.

Henry S. Holden of the Henry S. Holden Veneer Company is in Norfolk, Va., visiting the company's southern plant for two weeks.

S. M. Bonner of the Chicago office of I. T. Williams & Sons has been calling on the veneer trade in this city during the past few days.

Fred I. Nichols of the Nichols & Cox Lumber Company has just returned from a business trip to Memphis and other southern points. He reports favorable trade conditions, with stocks moving well and everything that is dry sold up close. The company's plant here is very busy.

The Rice Veneer & Lumber Company is now well located in the Vinkemulder building, Campau street, with commodious offices directly across the street from its yards. The company now has much more room for its expanding business, with improved facilities in every way and an excellent trade is reported. President Rice was in Chicago a few days during the past week.

The Dennis Bros. Salt & Lumber Company is operating its three mills and flooring factory in

Osceola county with full forces. Hardwood is being cut this winter and the company has a four or five years' run there.

Henry G. Dykhouse of the Acme Lumber Company has purchased the plant of the Kalamazoo Interior Finish Company at Kalamazoo for \$80,000. Mr. Dykhouse was vice-president of the company. About two months ago the company was thrown into bankruptcy by the sudden disappearance of Louis Larsen, the manager. The business has been turned over to Mr. Dykhouse, who will continue to operate the plant.

The Michigan Shippers' Association, which was formed in this city during the past year with the primary object of securing lower basic freight rates between Grand Rapids, western Michigan and the Atlantic seaboard, will continue its campaign, though the general freight traffic men have recently replied that they could not grant the request. The matter has now been placed in the hands of the State Railway Commission and early relief is hoped for. President R. W. Irwin of the Michigan Shippers' Association and a prominent furniture manufacturer here, says: "Detroit has an advantage over us in eastern shipments by some 20 per cent, while it can ship west just as cheaply as we can. Points in northern Wisconsin can place products in Cincinnati as cheaply as can northern Michigan points, and shipments from Maine can go into southern cities at as low and perhaps lower rates than the Traverse City district. In the Saginaw campaign and hearing before the Interstate Commerce Commission the main point of refusal to grant the petition was the contention that relief given in a local rate would tend to disturb rates all over the state. This contention cannot apply in the present instance. We feel that in securing the active aid of the State Railway Commission we have made a substantial gain in our campaign. These rates have been in effect for many years and are maintained by powerful influences. Shippers of the state must fight hard shoulder to shoulder to secure relief."

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

## CHICAGO

General trade conditions for this city show no remarkable change, either for better or worse over conditions which prevailed two weeks ago. In general, there is a tendency on the part of both producers and consumers to "rest on the oars"; the former, as in the past, are asking more than the local market is willing to pay and the consumers are holding off with the expectation of a break in prices, due to overproduction or to the necessity for changing some of the stock into money. The question is who can hold out longer. Still, while business is not rushing, it is fair and in some lines could be called good.

Concerns which deal with the railroads say that they are not only extremely close with their orders but are slow in payments, conditions attributable to the over-caution of the public in bond investments, and hence financial shortage for the companies, and to threatened adverse agitation, and prosecutions, which very probably make the railroads rather timid in placing extensive orders.

Some concerns report difficulty in procuring piling and ties, oak ties in general being scarce generally and selling in Chicago for 71 to 73 cents, in carload lots. The increasing use of concrete products in the place of wood, as piling, posts, etc., will undoubtedly have a weakening effect upon the market for those articles, though such a change must necessarily be very gradual.

Heavy bridge timber handled by the same concerns, is in good demand and in red oak, stocks are low. Best grades bring as high as \$30.

The mahogany trade is good and promises a steady improvement. Prices have steadied, though no material advance is shown, and promises to improve as the year advances. The best grades of African mahogany are worth in Chicago 13 to 13½ cents per square foot.

The cypress situation is bright in most quarters and prices good, and improving. All grades except finish are low. The country trade is as yet not brisk and as that is the principal source of consumption of finish, stock in that grade is rather full.

Oak in general continues its irresistible advance and will continue to do so, though quartered white oak shows a slight fullness and has declined to a small extent. There is the usual scarcity in red oak.

Upper grades of birch have been sold for \$36; the spring supply hasn't really started to come in yet, and good stock is hard to get. Poorer grades of southern birch for boxing are selling well, and find a market as a substitute for gum in that capacity. Such stock is worth \$12 and \$13, gum bringing \$18. Poplar box boards are bringing \$62 and cottonwood for the same purpose, about \$55.

Maple and cherry, especially upper grades, are in good demand.

Basswood has not shown any great improvement over recent conditions.

## NEW YORK

The hardwood market at New York shows a fair volume of trade for this season of the year. The chief interest, however, in all branches of trade lies in the spring prospects, which con-

tinue very bright, the feeling being that there will be a good demand for hardwoods in all lines. So far as high-grade lumber is concerned, its market seems assured. Prices are very stiff right now; stocks are scarce and hard to get in any large amount at any one given point. Such stocks as are available seem to be in sufficiently strong hands to assure a permanency to values with every indication of an upward tendency when the spring demand commences to be felt. Much interest is shown in the low-grade market. While prices on these grades show some fluctuation and competition in many lines, there seems to be more freedom in buying and an improved tone to consumption in all branches which bids fair to be materially increased with the opening of the spring trade. It is therefore felt that if the production of low-grade hardwoods is not overstimulated, the spring and summer market should absorb all offerings at very fair and firm prices. To these conditions might be added one word of advice, and that is in the matter of any inclination or effort to force the market. It is no time to do so, and if the market be allowed to take its natural course there will unquestionably be a very satisfactory condition in hardwoods for at least the spring and summer season. Poplar, oak, ash, birch and chestnut seem to be moving most freely, but the whole list is enjoying more or less demand.

### BUFFALO

The deep snow and after that good business in lumber is still the feature. As a rule everybody is doing much more than would be expected in any winter with as many drawbacks as there are now. One lumberman recently said that it costs at least 50 per cent more to handle lumber in Buffalo now than in the summer.

There is not a weak spot in the hardwood situation. At one time white ash was rather dull, but it is improving. Agricultural implement factories are in the market for a considerable amount of this stock. Quartered oak and inch birch are scarce. Prices on all hardwoods are firm, showing an upward tendency.

### PHILADELPHIA

There has been a perceptible diminution in activity in the general lumber business during the fortnight, attributable to the recurrent storms, which have seriously interfered with building operations and hauling facilities. The hardwood end, although not up to expectations, has held up fairly well. Orders are increasing and, although not rushed, trading is satisfactory and prices are stiffening. Reports coming in from most of the eastern hardwood fields are to the effect that it is easier to obtain orders than to fill them. The good ends of oak, chestnut, ash and all of the standard woods, especially of the dry quality, are scarce. A sincere optimism obtains throughout the trade in spite of the handicap of a harassing season, and it is believed that 1910 will prove a good year for the hardwood business.

### PITTSBURG

Pittsburg has been afflicted with the worst series of doses of winter weather that she has ever known. Since December 15 the ground has been covered with snow. Several times since January 1 snows have fallen to a depth of twelve to eighteen inches on the level, which has seriously crippled lumbering operations and lumber shipments. Many mills have been down because of no water for months. Others have been forced to stop running because their logging operations in the woods were proceeding so slowly that they could not get their yards filled up. Shipments have been slow. In fact, many

mills for the past month have been shipping entirely on old orders. The retail yards also have been doing almost no business in the way of getting lumber out of their yards. Building operations have been at a standstill and all kinds of outside contracting work has been so much delayed that contractors and others who had purchased lumber have failed to take it away from the retailer. Collections are also backward. Prices, however, are holding well, and wholesalers believe that just as soon as the weather breaks there will be lumber business in plenty.

### BOSTON

While demand for hardwood lumber has not been really active in all its branches this month, the market has lost none of its strength and every sign points to continued firmness throughout the list. Although trading is not brisk, there has been a slight improvement and all dealers anticipate a further strengthening of values, if anything. There have been many inquiries which will lead to good orders. All advices from hardwood manufacturing centers show that stocks of desirable lumber are not large—in fact, offerings are much smaller than usual at this season of the year. The yard trade is still rather quiet, although larger sales have been made. The better grades of lumber have had the largest call, but low grades have come in for more inquiry and it is the consensus of opinion that if business this spring develops as it should there is no reason why the latter grades should not sell freely. Holders are not trying to force sales at this time. They are content, in most instances, to wait for the buyer rather than to seek him if by taking the latter course it means accepting a lower figure than they are holding at.

Reports from the manufacturers of furniture in the East find most of the factories running steadily, although many could take care of a larger volume of business if they had it. It is reported that desk manufacturers are in receipt of a larger business. Office furniture has not been in large demand for a long time, but now that general business is slowly gaining this class of furniture is moving better. The piano trade has been fair and the automobile industry is rather actively engaged in the East.

The call for quartered oak is good and dealers have been experiencing difficulty in obtaining just what they want. Prices are daily growing firmer. Plain oak, ash and maple are also firm. The advance in maple flooring, it is said, will help out the demand for southern pine flooring. Whitewood is firm and higher prices have been asked. But little change can be reported in North Carolina pine.

### BALTIMORE

While the zenith of prosperity for the current year has perhaps not been realized as yet, there appears to be a gradual upward movement in general trade conditions. All stocks show an increasing demand and a scarcity in some lines at the mills, leads a decided firmness to prices. Accordingly the prospective buyer is slow to place orders and contents himself with what business is already booked, hoping that he will be able to fulfill future necessities at a better figure. Manufacturers, however, confidently predict an advance in all values.

Mills along the Appalachian chain have been greatly interfered with by the weather conditions of the past two months, and the output has been very moderate. Southern plants have fared much better in this respect, and have managed to keep going most of the time. Most of the wood-working establishments that consume hardwoods have had enough work to keep them going full time and the yards have been called on to furnish about as much lumber as they could well expect to dispose of. The Middle West in

particular continues to be a large buyer in all lines, and at good prices.

Oak, ash, beech, chestnut and other woods are in very fair demand, and a quickening of the movement as the season advances is looked for. Some of the eastern yards are reported to have extensive supplies on hand, and to be placing orders only as their present holdings are distributed. Dealers, however, are buying with greater freedom, and in the aggregate the business done attains impressive proportions.

The feeling among the exporters is growing better all the time. They report increasing inquiries from abroad and predict that foreign buyers are getting into a position where an extensive replenishing of their assortments will become essential. Already there is noted a growing tendency towards better prices, and while they are not yet satisfactory to the shippers, the instances where the terms of the exporters are met have ceased to be rare. The exporters are in search of stocks and continue to buy with considerable freedom and at figures that indicate expectations of good returns. The activity in poplar seems unabated, and even the stocks of low grade do not at present exert heavy pressure upon the market.

### CLEVELAND

Business, while unsatisfactory, is not as brisk as it should be, owing to the unfavorable weather conditions. The winter has been a long and hard one and building operations have been tied up for the past three months. The hardwood end of the industry is not being as hard hit as other branches, but the effect is being felt nevertheless.

It is believed that with the opening of spring and the resumption of navigation that there will be a decided improvement in all lines of business and that the hardwood dealers will come to their own.

Oak and poplar are in good demand. Quartered stock is readily disposed of and plain oak does not have to go begging for buyers. The market for good wide clear poplar is as good as ever among the automobile concerns, while the narrower stock is also selling well for building purposes. Birch is in good demand with little stock being offered.

### COLUMBUS

Despite the continued unfavorable weather, which has practically stopped all demand in retail lines, the market for hardwoods in central Ohio remains steady. Manufacturing establishments are in the market for a large amount of stocks, and this has the effect of counteracting the dullness in the yard trade. Taking it all in all the demand is good, when the conditions are taken into consideration and prices have not suffered as a result of the lull. One of the best features of the trade is the good demand for car stocks. Factories making furniture, agricultural implements and vehicles are also in the market for a larger amount of material. Factories are taking a larger amount than the maximums contained in their contracts, and this condition has the effect of keeping up a strong appearance.

While no advances of any consequence have been announced within the past fortnight, all quotations hold firm. Manufacturers and shippers unite in the belief that just as soon as the winter breaks there will be a rush of orders, which will mean substantial advances in many varieties and grades. Red oak continues strong, and prices at the Ohio river are: Firsts and seconds, about \$50; No. 1 common, \$32; No. 2 common, \$20. Quartered oak is one of the strongest points in the market, with the supply limited.

Poplar is still in good demand from all sources. Chestnut is firm; small advance is recorded in sound wormy. Ash is moving along well, with

prices steady. The demand for hickory seems to be expanding and strength is shown in that variety. Walnut is becoming stronger, and one of the best features is the better export demand. Other hardwoods are steady, and no declines are reported in any direction.

## CINCINNATI

Thirteen inches of snowfall the past week following several weeks of severe winter weather interfered with operations in the local yards to such an extent as to almost paralyze business. The railroads were severely handicapped in the local yards and the handling of cars was a source of much difficulty. The mails, however, continued to bring in a satisfactory volume of orders, which will necessarily result in a heavy business in the yards as soon as weather conditions permit.

There is a good inquiry for quarter-sawn white oak of good figure, and there is but a light stock to meet the demand. Plain-sawn white oak is meeting with a ready sale for all that can be procured. Red oak, both quarter-sawn and plain, is moving freely, with a very strong tone to prices. Chestnut is in moderate request for long stuff suitable for interior finish. Sound wormy of good grade is moving readily, while there is an abundance of low-grade material than can be had at very low prices. Poplar continues to be the leader in the activities of the hardwood market, with a good demand for clear wide panel stock. There is an abundance of ordinary grades, which is meeting with an active market. Low grade stock is plentiful and far in excess of the demand, though the movement of such poplar is quite satisfactory. Ash is in good demand, especially for heavy wagon makers' stock, which is not plentiful. Hickory is meeting with a fair demand for wheel and shaft and pole manufacturers' stock. Red gum is steadily coming to the front as a feature of the market for the furniture manufacturing industry. Walnut is in good supply and stocks are steadily increasing, owing to the weak demand from the exporters. Cherry is increasing rapidly in the stocks available, but the holders are certain of an early improvement in the foreign demand. The buying for export is very slow.

Cooperage is meeting with a steady and active improvement, with a brisk demand for tight cooperage, especially whisky barrels. Slack cooperage is showing some activity. There is a good demand for white oak staves.

Box manufacturers continue to enjoy an active business. There is a good demand for merchandise and heavy packing cases, while the demand for small boxes is very brisk. Bottle boxes are in strong demand, with a fair inquiry for egg cases.

While present indications for building do not augur well for a brisk season, there are those that say that the opening of the spring and favorable weather will bring better conditions. As compared with last year the building contracts made to date are far short.

There is a little more activity in building lumber, especially for interiors and the class of work manufactured by the planing mills and sash and door factories.

## INDIANAPOLIS

In view of the fact that Indiana has been visited by the worst snow storm and blizzard in more than twenty years, during the last two weeks the hardwood lumber business has been rather dull. Traffic has been seriously interfered with, but is now resuming a normal condition. For several days it was practically impossible to make shipments. As soon as the snow thaws it is expected that business will renew with vigor, as numerous inquiries are being received, and hardwood manufacturers and

dealers have some very substantial orders on their books.

## EVANSVILLE

The market for hardwood lumber in this section has been very good for the past two weeks. Business was stimulated quite noticeably by the meeting held the first of the month at Cincinnati. Owing to the inclement weather not as much lumber has moved up to the present time as might reasonably be expected. However, if the weather continues good February will be a fair month in point of shipments.

Demand is stronger for almost all kinds and grades of lumber, with poplar in the lead. Plain oak is in fair demand, but the overproduction has tended to make prices a little unsteady. Quartered oak is in active call, with prices advancing. Local furniture factories are all running full time, while a few are running a night shift.

## MEMPHIS

The demand for hardwood lumber is very good and the volume of business is increasing. Both manufacturers and wholesalers acknowledge that conditions are better than for a number of months as regards the amount of business being done, and there is also considerable unanimity regarding prices. It is generally conceded that values are higher now than they have been at any time since the improvement began last fall, and it is pointed out that in some cases, notably in plain and quartered oak, prices are higher than they were before the financial depression. The demand is still proportionately larger in the higher grades than for the lower, but there has been a perceptible increase in the call for the latter. This is particularly true in the case of oak, ash, cottonwood and gum. There is a very satisfactory call for cypress and the movement in the upper grades of cottonwood is good. Cottonwood box boards are scarce and prices are very firm as a result of a large sale which was recently consummated here. Red gum is moving at a good rate and there is also a good call for clear saps. The supply of low-grade cottonwood and gum is smaller than a short time ago. Prices are also slightly more firmly held—in fact, some interests appear to be quite willing to carry their low-grade stock longer because of their belief that they will be able to secure better prices later. High-grade ash is moving very well and the supply is none too large at the moment. There is a particularly good call for firs and seconds in stock running 1½-inch or thicker. Export demand is very good for southern hardwoods, but the market is much better in this country than in Europe, both as regards the volume of business and prices obtainable.

## NASHVILLE

With a shortage in good stocks being predicted, the better grades in all the hardwood lines are in steady demand. Poplar continues as a leader in the hardwoods. Ash is coming stronger every day. A general activity maintains in the upper grades and thicknesses of oak. Chestnut, birch and maple are in active demand. Cypress is firm, and an improvement is noted in basswood and gum. Lumbermen are all expecting an active spring trade. Orders are coming in more frequently. Considerable timber is being handled on the river while the tide is on. Local weather conditions have been unusually rough and severe for some weeks, and some of the plants at times could not get their full force of men out, but it is believed the backbone of the winter is broken at last and that from now on more building that has been deterred by bad weather, can be begun and the movement of timber can go on without serious interruption from the elements.

## LOUISVILLE

In spite of the worst weather of a bad winter—heavy snow and rains—the condition of the hardwood market in general is very good. Local dealers feel that nothing but the weather is keeping the business down to where they can handle it with their present forces. Reports from all over the country indicate increased building movements and locally the permits are breaking all records. Low grades are still moving about as last month and there is not much fear of them piling up in the last two years. Prices are firm on all high-grade stuff with quartered oak and poplar moving best. There is hardly a doubt but that the prices will make for a new level with the opening of spring building operations.

## ASHLAND

Although the weather conditions of this section have been very unfavorable, large amounts of lumber have been loaded. Prices remain firm and, if anything, are increasing, and a great many orders are being received by the various manufacturers for immediate and future shipments. Inquiries are plentiful and buying is being done on a more liberal scale. The railroads continue to buy a large quantity for immediate and future shipments and buy mostly all grades of lumber at more satisfactory prices.

Hardwoods are in good demand from sources the manufacturers have not heard from for some time. This especially refers to lower grades and is also noted that the furniture and retail manufacturers are laying in a large amount of stock, getting ready for the coming spring and summer business.

Quartered and plain red and white oak is in good demand. The better grades are scarce. Poplar continues to be in very good demand, especially in panel stock.

## ST. LOUIS

A noticeable improvement has taken place in the hardwood situation during the past few weeks. The volume of hardwood business has been better, and instead of the better grades of hardwood being exclusively called for, other grades are also being bought. In fact, the demand for the lower grades is getting better all the time. No. 1 common plain and quartered oak is in particularly good request. This is also true of poplar, ash and gum. Thick ash is also in good demand. Maple and hickory are showing improvement. What is worrying the hardwood producers is the fact that there may be a scarcity of dry stock, particularly poplar. Other woods are not so short, although all of them will run short, it is feared, before the spring buying season is over. Because of the advance in prices of upper grade stock the lower grades are being bought more liberally than would be the case otherwise.

## MILWAUKEE

There is a decidedly better tone to the hardwood trade and dealers say that it is the beginning of the heavy spring business that is expected. While dealers about the state are not ordering as heavily as they might, they are sending in some favorable inquiries and there is every indication that stocks are unusually low. Several wholesalers predict that should the building season open with a rush there would be a genuine scramble for stocks. The traffic situation is gradually clearing up and shipments are much easier.

The most favorable feature of the Milwaukee situation is the lively demand from the sash and door and interior finishing plants. Manufactur-

ing plants in general are placing some good orders for stocks. The increased demand and a shortage of stocks in some lines has resulted in several advances in price. Shop grades of birch and basswood are higher and advances have been made in plain and quarter-sawn oak. Poplar is also higher. Dry stocks in some lines are far from being as large as they might be.

## MINNEAPOLIS

Interest in wholesale circles here now runs largely to the prospects for future supply of northern hardwoods. The dealers have made their southern contracts and are pretty well assured of stock from that direction except as to shipment, but they have not made full arrangements for birch, basswood, elm and maple and are proceeding cautiously. Birch is almost out of the market already and will be for consumers until about July 1, which puts a fancy price on everything in the birch line. The mills have marked up the price on their new stocks and do not seem particularly anxious to contract even at the advanced prices. The wholesalers are in no hurry, either, as they think the supply is going to be abundant when it does come. Just now birch in all grades is higher. Even the No. 3 stock is running low and is held at firmer prices, which do not please the boxmen and other consumers. Basswood culls are still dull and are the weakest spot in the market.

Southern oak, which is the main dependence of oak consumers, is in fair supply, but held at strong prices. Plain oak is firm at \$53 here and quartered at \$85 to \$87. Maple is also looking up, and the flooring factories are using large quantities of it. The sash and door factories are buying intermittently. They do not like present prices and it is taking time to educate the trade to the necessary advances in hardwoods. Country buyers are coming into the market more actively now with calls for wagon stock, flooring and other staples for yard supplies.

## SAGINAW VALLEY

The market is strong with an excellent movement. Dealers have not been as busy in years, handling stock to the mills and thence to customers. The trade is taking everything offered at strong prices. It is estimated that deals have been closed since the first of the year for more than 60,000,000 feet of maple to be cut for this season's delivery. No. 2 common and better maple is a ready seller at \$22 to \$25 and extra thick is higher. The stock of basswood is limited. There has been less doing in beech than in any other wood, but it is also picking up. Birch is strong and not in large supply. The offerings of ash are small and more could find a ready sale at about \$30 and \$32. Trade in elm is improving. No. 3 hardwood stock is selling at fifty cents to \$1 higher than it brought thirty days ago. The trade in flooring is active and the plants are moving large quantities.

## DETROIT

The hardwood situation in the Detroit district is strong and healthy in most respects. Maple and birch are particularly active, with dry stock practically unobtainable. Most large manufacturers state that they have contracted their season's cut both of maple and birch. Basswood is also being picked up closely and there is a good demand for this wood at last year's prices. Beech is the only northern hardwood dragging in this market. Very few sales have been recorded in the past six months and there are large dry stocks awaiting buyers. Manufacturers, however, hope that the stiff advance in prices of maple and birch may lead to an increase in the demand for beech.

## OAK FLOORING

An artistic volume by Henry H. Gibson, editor of Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick: Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

# A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances **without adjustment**. It has many other good features, but we've no more room to describe hem.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

## HERMANCENCE MACHINE COMPANY

WILLIAMSPORT, PA.

Chicago Machinery Exchange, 159-161 N. Canal Street, Chicago

### Chicago Machinery Exchange,

(Incorporated)

WOODWORKING MACHINERY MERCHANTS  
CHICAGO, ILLINOIS

No. 35 SINGLE SURFACE PONY PLANER

Planes 24 inches wide and 6 inches thick. Table slides on outside of frame so it is steady and the work will not be wavy or have clipped off ends. Two rates of feed driven from cylinder, one regulating the other.

### MOST PERFECT

## DOUBLE HEAD DOWEL MACHINE

These machines have two spindles running side by side, both spindles operated at the same time and by the same operator. Double No. 1 cuts from ¼-in. to 1-in. diameter; double No. 2 cuts up to 2-in. in diameter; double No. 3 cuts up to 3-in. in diameter. These machines are designed for the rapid production of round rods for all purposes, and have a capacity of 7,000 feet per hour and larger when required. Waste stock and every grade of stock may be turned without danger of it twisting off or clogging in the cutter head.

Write for Circular describing these machines in detail

There was even some question about the "two per cent." We cheerfully made good in each case, thus giving our customers the benefit of the doubt.

That is the kind of a Saw for you. Reduce the cost of operating and increase your output. Less work in the filing room—fewer Saws to buy and more and better lumber. Just specify—

## RED BOOK

Published Semi-annually  
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago

WE CAN  
**DOUBLE**  
THE CAPACITY  
OF YOUR  
DRY KILN.

**GUM**

The Best Lumber You Can Buy.  
CAN YOU USE IT?

Our drying process will smooth out the kinks, stop the checking and make the toughest gum board

**STAY WHERE YOU PUT IT**

You should see this wide, clean stock, with its soft, velvety grain, properly dried for tops, fronts and sides.

## THE GORDON HOLLOW BLAST GRATE CO.

GREENVILLE, MICHIGAN

Manufacturers of the well-known GORDON HOLLOW BLAST GRATE ("The greatest steam maker known") and

**SPECIALISTS IN THE BUILDING OF EDGERS AND TRIMMERS**

72 sizes and styles of edgers 72  
10 sizes of trimmers 10

Front View, TOWER One-man Two-saw Trimmer, Small Size

We have devoted twenty years of our lives to this business, and are recognized leaders, our designs being admittedly ideal from every point of view, the machines being

**PRACTICAL,  
CONVENIENT,  
SIMPLE,  
COMPACT,  
DURABLE.**

We call especial attention to the "TOWER" ONE-MAN 2-SAW TRIMMER, the construction of which is such that it does MORE WORK in a given length of time, with LESS WASTE OF MATERIAL and LESS FATIGUE TO THE OPERATOR, than any other trimmer made.

Ask us WHY.

## DODGE SPLIT FRICTION CLUTCHES

are "making good" in the hardest kind of service —Cement Mills, Smelters, Clay Working Plants, Beet Sugar Houses, Wood Working Mills. Many of the largest Manufacturers in these lines have, after comparative tests and trials, adopted the Dodge Clutch.

There's a good reason why there are more Dodge Clutches sold than any other.

Ask for Bulletin No. G-116.

**DODGE MANUFACTURING CO.**  
Station H-55, :: Mishawaka, Ind.

## SECTION OF THE BEST CHANGEABLE TOOTH SAW EVER INVENTED

There are other Simonds tooth styles for various purposes. The point is this: Simonds Inserted Teeth, because they are on two separate circles, are machine milled, and have a good support well into the blade of the saw, make the most reliable Inserted Tooth Saw on the market. Prices very reasonable. Deliveries prompt. Write for special booklet free.

**Wm. B. Mershon & Co., Saginaw, Mich., U.S.A.**

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address :

**THE SINKER-DAVIS COMPANY, Indianapolis, Indiana**

## A SMALL BENCH HAND PLANER

**FOR WOODWORKERS**

Every woodworker whose shop is equipped with power should not be without one of these BENCH HAND PLANERS.

On it you can do all kinds of surfacing and jointing you will require and in half the time it would take you to do it by hand. With it you can plane out of wind, surface straight or tapering, joint, edge, etc. in the most rapid and perfect manner.

OUR

**NO. 254 BENCH HAND PLANER**

is not expensive. The price is within the reach of all.

Write for Large Illustrated Circular

**J. A. FAY & EGAN CO., 414-434 W. Front St., Cincinnati, Ohio**

**High Daily Averages** in skidding depend principally on initial capacity and the degree to which the skidder can be operated to that capacity.

**The Clyde Self-propelling Steam Skidder** is absolutely independent of loading and is never held back nor its full capacity interfered with by any loading conditions that may exist. Full capacity is therefore possible when conditions are favorable and the hauls are short thus insuring a surplus of logs to compensate for those days when conditions are unfavorable and the hauls are long.

With the independent and separate loading unit, the loading crew may then be pushed to its fullest capacity at all times assuring a uniform daily flow of logs to the mill. It is self-propelling, can move frequently without loss of time and sets quickly because of its special steam guying device.

Send for our descriptive catalogue, also testimonial booklet.

## CHECKING, SPLITTING, ROTTING POSITIVELY PREVENTED

by **LORAC**, a thick liquid, to be applied to either timber or lumber at a trifling cost. It will not discolor or injure the wood, neither will it interfere with its subsequent working or painting. It requires no preparation before use, no heating or mixing, and is easily applied by unskilled labor.

Ryan-Stinson Lumber Co., Memphis, Tenn., writes July 21, 1909: "The Lorac Protector we received seems to be doing pretty well. Please ship us at once another barrel of 600 lbs."

The Florence Pump and Lumber Co., Memphis, Tenn., writes July 1, 1909: "The Lorac Protector we recently had from you was all that could be asked for, and works splendidly, preventing the ends of squares from checking. Send us two barrels of 600 lbs. each."

Dec. 18, 1909: "Please send us two barrels of Lorac, about 600 lbs. each."

L. V. Schwartzman, of Gloucester, N. Y., Manager of Bank and Office Estates, writes under date of Aug. 2, 1909: "I have given your Lorac Protector a trial on some lumber, and find it has to be the best that you claim for it. Please ship me a barrel of 600 lbs. at your earliest convenience."

Herr Lange, Chief Forester, The Bismarck Forestry, Friedrichsruh, Germany, writes: "As your Lorac Protector has shown excellent results on Beechwood, we request that you send us some of your Lorac Protector of the same."

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

# Linderman Automatic Dovetail Glue Jointer

To the woodworker who weighs the cost of Jointing Lumber and the value of his finished product the LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER offers a method that eliminates the operations necessary to complete a glue joint as jointing, glueing, clamping, unclamping and edging the jointed panel to width, combining the five hand operations into One Automatic Operation with a

## WEDGE DOVETAIL JOINT

which has proven by practical tests to be stronger than a flat joint because it allows the glue to stay in the joint until the tapering wedge Dovetails draw the lumber together which forces the glue into the pores of the wood welding it with a permanent clamp.

**BAY CITY :: MICHIGAN**

# CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

☐ For more than thirty years the manufacturers of lumber at Cadillac have conducted business on one definite policy.

☐ In brief, that policy has embraced a source of timber supply of the best in the state of Michigan; the employment of the highest class of workmen and best machinery in the manufacture of their lumber and flooring; the exercise of exceptional care in the seasoning of stock, infinite pains in grading and painstaking attention to the requirements of every customer.

☐ The result of this policy has been Cadillac Quality and Cadillac Reputation for Satisfactory Dealing.

☐ If you are not a Cadillac partisan, it will be to your interest to get in line. Be friendly—write us.

TALLAHATCHIE LUMBER CO.

- - -

PHILIPP, MISS.

# R.E. Wood Lumber Company

Manufacturers of Yellow Poplar, Oak, Chestnut, Hemlock and White Pine.

We own our own stumpage and operate our own mills.

Correspondence solicited and inquiries promptly answered.

GENERAL OFFICES:  
CONTINENTAL BUILDING.

Baltimore, Maryland

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

# GIBSON TALLY BOOK

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets— $4\frac{1}{8} \times 8\frac{5}{8}$  inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket.

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

Special, patented, triplicate tally tickets supplied, printed on waterproofed paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability, convenience, accuracy, and for systematizing the inspection and measurement of lumber.

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

## PRICE LIST

Aluminum Tally Covers, each.....	\$ 1.00
Aluminum Tally Covers, per dozen.....	10.00

## HARDWOOD RECORD

Not only the ONLY HARDWOOD PAPER  
but the BEST LUMBER PAPER published

# LANE SAW MILLS

**Cut the Best Lumber from  
HARDWOOD LOGS**

(The cut shows our No. 2  
Double Mill with 25 ft.  
Carriage, one of 10  
sizes and several  
styles.)

## THE REASON WHY?

BECAUSE their saws do not "dodge" nor follow the grain but cut so absolutely true and accurate that the planer has next to nothing to remove in surfacing, resulting in a GREAT SAVING IN STOCK.

OUR MILLS HAVE DISPLACED BAND MILLS FOR CUTTING OAK AND HICKORY

## **WE ALSO MAKE**

A large line of other Wood Working Machinery including Planers, Matchers, Edgers, Trimmers, Shingle, Lath and Clapboard Machinery, Live Rolls, Steam Feeds, Air Buffers, Niggers, Log Hauls, Etc., Etc.

THE LANE GUARANTEE IS BACK OF IT ALL

# General Electric Motors Will Increase Your Profits

GENERAL ELECTRIC MOTOR DRIVING TIMBER SIZER

## Bigger Output

Whether all the shop, or only a few machines are working, each machine is doing its best. The speed of every one is under full control of its operator.

## Lower Expenses

Every machine makes the most of its power. The motor is attached direct to the shaft of the machine instead of turning it through belts and long lines of shafting.

## Better Work

The one speed best for each kind of work can be found and kept. There are no belts to look after. The operator can give his whole attention to the work. Best results are easily obtained.

GENERAL ELECTRIC MOTOR DRIVING BAND RESAW

## Your Woodworking Shop Needs Electric Motor Drive

There is a kind of motor for every type of machine and a size for every capacity. Electric Motors are as useful to small shops as to larger ones. Expert machinists are not needed to care for them. With slight attention from the man at the machine these motors are always in condition.

### Coming Association Meetings

#### NATIONAL LUMBER MANUFACTURERS' ASS'N.

The Board of Governors of the above association have fixed the dates for the 1910 annual meeting for April 19 and 20 at New Orleans, La.

GEORGE K. SMITH,  
Secretary.

EDWARD HINES,  
President.

#### NATIONAL HARDWOOD LUMBER ASSOCIATION.

The next annual meeting of this organization will be held at the Seelbach Hotel, Louisville, Ky., Thursday and Friday, June 9 and 10, 1910.

F. F. FISH, Secretary.

O. O. AGLER, President.

### General Market Conditions

With improved weather conditions the country over there is a manifest revival in hardwood business affairs. Buying is materially strengthening in all sections and producers are not as critical about "quality" as during recent months.

The shortage of a good many items of stock, notably in the good end of oak, poplar, cottonwood and gum, is inducing purchases in lower grades to be substituted for the former higher qualities employed.

Undeniably there is very little dry stock of the higher grades of nearly all the standard varieties of hardwoods in first hands.

Firsts and seconds oak in white and red, both plain and quarter-sawed, are having about their own way when prices are considered, as there are light stocks in the hands of both manufacturers and jobbers.

It seems to be almost a runaway race in values on panel poplar,

and firsts and seconds are following very closely.

Basswood and buckeye are not in as strong request, but the trade seems to be improving in both these woods.

The condition of black walnut and cherry is normal. There is only a moderate stock and an equally moderate demand.

The situation in hickory is featureless. Prices have not reached a high stage.

The gray elm of the North is in active request, with the soft elm of the South in only moderate demand. The rock elm of the North seems to be dragging very materially owing to the substitution of other woods for the standard purposes for which this material has formerly been employed.

Both northern and southern beech is doing a little better, but still the wood is sold at very close to manufacturing cost, which leaves little or nothing for stumpage value.

The birch of the North is in continued active request and there is very little of the better qualities on the market.

The demand for hard maple of the North in all thicknesses up to six inches is beyond the ability of manufacturers to supply. Soft maple of both the North and South is in fair demand, but still has not reached an altitude of value that makes its manufacture materially profitable.

Firsts and seconds chestnut being only in limited supply is in active demand at eastern points, prices ranging well up towards that of oak. Sound wormy and the lower grades is in increased demand, but still there is a considerable stock yet in first hands.

Plain inch white oak is showing close to \$50 a thousand f. o. b. Ohio river and No. 1 common is ranging close to \$32 at the same shipping points. Plain red has about the same range of values.

One inch quartered white oak is being listed as high as \$84 at Ohio river points, and quartered red at \$62, but there is little of either to be had.

The ash situation is not particularly promising. Substitution has taken place for this wood to a point where it is not moving with any great freedom. This is true of the white ash of the South and the black ash of the North.

Cottonwood in panel and wide No. 1 box boards, and firsts and seconds, is in good demand, and there is a very limited stock. There is considerable No. 1, No. 2 and No. 3 common still in the hands of the manufacturer, but not in excess of prospective requirements.

The transfer of the affections of the furniture and interior finish trade to red gum has well nigh exhausted strictly red in first hands, but there is yet a considerable surplus of sap, No. 1 and No. 2.

Cypress is doing better than it has in years, and it is especially strong in firsts and seconds and selects.

Evidently, largely owing to the low range of values, there is a good and increasing call for dimension stock of all sorts, but notably in oak table and chair material. There is also an increased call for oak car material and for vehicle and implement stock for both oak and hickory.

There is no notable change in either the price or demand of any variety of mahogany. The trade in this wood moves along about as usual, with perhaps a slight increase in prospective demand.

The hardwood interior finish people are fairly busy and the same can be said of the oak and maple flooring trade.

The business in veneers shows no notable change either in quantity or in price being obtained. The capacity of the veneer plants still seems to be in excess of demand, which results in a slight overproduction, and in consequence prices are lower than profitable manufacture would warrant.

## Two Notable Conventions

The meeting of the National Association of Box Manufacturers held at French Lick Springs the latter part of February was not particularly notable for the legislation ensuing but for the exceptional quality of sundry papers read. While a good many of these documents were not germane to the box making business per se they were extremely interesting and instructive. The RECORD regrets that want of space prevents the publishing of all the papers, but if space permits several of them will eventually be printed in these columns.

The other notable meeting referred to was that of the National Wholesale Lumber Dealers' Association, which convened in Cincinnati on March 2 and 3, and of which a full report is printed in this issue.

This association is celebrated chiefly for the harmony that exists between the individual members of the association itself and the sundry lumber associations the country over. It has scarcely ever befallen that an association made up as this one is has had so many problems to work out as has the National Wholesale Lumber Dealers' Association. Its trade relation matters have been most serious, for arrayed against it has been a score of retail organizations, which to draw it mildly, have exercised a good deal of selfishness in their demands in what constituted good trade ethics in the distribution of lumber. These retail associations, including the strong New York Lumber Trade Association, has for years insisted upon having about all the milk there was in the cocoanut, and it redounds to the credit of the wholesalers' organization that it has maintained almost without interruption peace and harmony with the various branches of the trade.

The association, literally speaking, has stayed in the middle of the road, attending strictly to its own business, and has achieved the respect of not only manufacturers within and without its membership but of the retail organizations as well.

This organization has also taken up, usually with success, a good many important matters of legislation, insurance, arbitration, commercial reports, etc., with distinction to itself.

It is purely a business organization and goes in for but few of the "frills" that are concomitant with many other organizations. Its business is discharged promptly and practically, and every committeeman does an immense amount of work to further the work of the organization.

The recent meeting held at Cincinnati was largely for the purpose of educating the western lumber manufacturer and merchant up to the value of membership in this association. Undeniably it has admirably succeeded as already there is a manifest interest shown by the western contingent to join hands with this great organization, whose headquarters are located in New York city. Any one of a dozen features which stand out prominently in this association's work would well repay the western man to join hands with it.

## Information Service

The RECORD has contended for years that the trade newspaper, to be of maximum value to its clients, should not only be conducted on the lines of a newspaper but its columns should carry such general information as is of value to those employed in the line of trade it represents. This service it has consistently attempted.

The RECORD further insists that a trade paper to achieve the maximum of usefulness should be prepared to collect and collate all information germane to the industry to which it caters and practically on call to be able to deliver this information to its patrons.

The system of the RECORD office is such that if the information asked for is not "on tap" steps must be taken immediately to secure it and deliver it to the inquirer. It is a rare case, indeed, when an intelligent answer to queries pertaining to any feature of the trade is not handled out by mail either on receipt or with reasonable promptness.

The RECORD office contains more than 100,000 cards, each one carrying a specific piece of information, and this is at all times at the disposal of its patrons.

Unfortunately a great many readers are either not posted on the quality and voluminous character of this Information Service or are indifferent about its employment. However, there are hundreds of patrons who are regular applicants for some portion of this information.

Primarily, this service was instituted for the purpose of collecting and collating information about the distribution and sale of hardwood lumber, and today a very comprehensive list is involved in forty-two pamphlets supplied to advertisers, reciting the names of hardwood consuming concerns, their addresses, name of their lumber buyer, and the quantity, kinds, thicknesses and grades of lumber employed by them annually. While this service is by no means complete it forms a basis for an admirable reference system for those having hardwood lumber to sell, and is the means of intelligently communicating with prospective or possible buyers.

This service is kept corrected up to date, and the RECORD has just issued an eighty-page pamphlet showing the numerous changes which have taken place in hardwood requirements among wholesale consumers during the last six months. The composition bill on this single document is more than one hundred dollars, and the cost of collating the information was fully a thousand dollars additional.

This publication has now well under way a series of index cards showing the annual output of various kinds of woods by hardwood producers throughout the country. This list is classified by woods, and the RECORD is able to supply to its clients the names and addresses of many producers of any kind of wood its patrons may ask for. Beyond this the information files in this office contain lists of manufacturers in all leading lines of hardwood utilization, and there is not a day that it does not supply sundry information of this sort pertaining to the hundreds or more trades that employ hardwoods as a chief element of their purchases.

All the clients of the RECORD are requested to employ this service whenever they need it as the publishers regard the supplying of information to its patrons as a necessary part of their obligations in accepting advertising contracts from them. It is the desire to not only exploit the advertiser and the goods he has to sell but to tell him where he can either buy or market any variety of forest product.

## Delays of Conservation Progress

The magazine, *The World's Work*, aptly epitomizes the situation in the great conservation movement which is so necessary to the commercial progress of this nation. This publication states that the National Conservation Commission appointed by President Roosevelt for the first conference of governors prepared a comprehensive report on the resources of the country as a basis for a broad plan for their proper utilization. This plan never developed. Chairman Tawney of the Committee on Appropriations in the house introduced an amendment to the appropriation bill cutting off all funds which the commission might need, and making it illegal for any government employee to help it in his official capacity. Without money and with important sources of its knowledge thus withdrawn, the commission has continued to exist but it has not done the definite work laid out at the historic and important meeting. It is at a standstill because of the hostility of Congress.

Two years ago the report of the Inland Waterways Commission was transmitted to Congress by President Roosevelt with an urgent message for action. Everybody believes in waterways. Railroad men themselves say that they will soon be necessary for traffic.

and shippers on many rivers cry for them. Yet the inland waterways campaign is where it was two years ago.

At the end of the report Senator Newlands, who was chiefly responsible for the passage of the reclamation act in the senate, submitted a supplementary report which foretold this delay and proposed that a committee of experts be empowered to select definite projects to be worked out in accordance with a comprehensive plan.

What has been done so far in conservation in the United States has been done by the Forest Service, the Geological Survey and the Reclamation Service. A Waterways Service, such as Senator Newlands proposed, is necessary before any satisfactory beginning can be made. Until some such comprehensive plan is made the continuation of the work on the rivers by the government under the "pork barrel" system is a criminal waste of money.

Year after year Congress has appropriated millions of dollars to improve the navigation of the rivers, and year after year the navigation of the rivers has decreased. A commission which understands the laws of traffic as well as the engineering problems, which can put its finger on the present trouble, and show the remedy, might make our rivers well regulated carriers of heavy commerce from the interior to the sea, and perhaps still more important, prevent floods. Today the great rivers of the country destroy more property than they carry, and under their present handling will continue to do so.

The same delay in conservation progress is duplicated in the case of the very necessary Appalachian forest reserve. At the north-west corner of Georgia, near the North Carolina line, three great rivers have their sources, within rifle-shot of one another, the Savannah, the Chattahoochee and the Tennessee. The headwaters of half the streams of the United States are in the Appalachian mountains in a comparatively limited area in which there are few vested interests of large capital, and these watersheds are protected by the only large body of hardwood forest that is left. The project to make an Appalachian park reserve, so necessary for economic reasons alone, can be chargeable strictly to Speaker Cannon's opposition during the last Congress, and now practically has dropped completely out of official sight.

When will the spirit of modern progress, rather than of modern plunder, ever overtake the legislators at the nation's capital?

## The Enterprise of Memphis

The business men of Memphis, through their commercial clubs, are fully aware of the possibilities of increasing the tremendous business momentum that that city now enjoys. These clubs are now making an effort to raise \$50,000 to be employed in advertising Memphis. There are many good reasons why manufacturing industries, in which hardwoods enter largely, should locate in this progressive city of the Middle South.

Primarily, there are now thirty-five sawmills in operation in that city and five hundred more within a short distance. Seven new sawmills are being located or rebuilt at Memphis at this time. The city is in the heart of the great forest area of the Mississippi valley, where gum and cottonwood grow; where oak is at its best; where there is splendid white ash, hickory, elm and cypress.

Memphis is a prosperous and growing city. It has the metropolitan airs of New York; it has the Lumbermen's Club of one hundred and thirty-five members, and a Business Men's Club of a thousand members, and these are the organizations that are desirous of spreading the fame of Memphis and bringing the world to its feet.

Two of the members of the Publicity Committee of the Memphis clubs are the well-known lumbermen, S. B. Anderson of the Anderson-Tully Company and W. H. Russe of Russe & Burgess, Inc. Either one of these gentlemen will be glad to put manufacturers in touch with good locations at Memphis, with an assurance of friendly coöperation on the part of business men to carry on their various enterprises with success.

Memphis is a good place to live. It has strong financial insti-

tutions, capable of taking care of business needs. Its bankers are well acquainted with the standing of lumbermen and woodworkers generally in the business world, and are anxious to have such men locate in Memphis, as they know they make good depositors as well as safe borrowers.

The geographical position of Memphis makes it a remarkably desirable location for either the lumber manufacturer or the remanufacturer of hardwoods of nearly all types. It is the hub of a wheel, embracing Chicago, distant five hundred miles; St. Louis, three hundred miles; Kansas City, four hundred miles; New Orleans, four hundred miles; Dallas, five hundred miles; Mobile, four hundred miles; Atlanta, six hundred miles; Knoxville, four hundred miles; Louisville, four hundred miles; Cincinnati, five hundred miles, and Indianapolis, four hundred miles.

This location insures very desirable rail freight rates to all centers of consumption, and with the prospective improvement of the waterways of the country, Memphis should eventually become the Chicago of the South commercially.

## Editorial Notes

The Pooh-Bah of Paducah is credited with the assertion that if it hadn't been for the lumber trade newspapers universal hardwood inspection would have been an accomplished fact long before this. Which is reminiscent of the cry of the nimble-fingered gent who scurries down the street upon the discovery that a watch is missing.

The movement inspired by President Brown of the Chicago Hardwood Lumber Exchange to form out of the three lumber organizations of this city one great association of lumbermen is looked upon with favor by the majority of the lumbermen of Chicago. Logically carried out, it undeniably will be the best move that the lumber trade of this great central market ever made. As was stated at the meeting of the Chicago Hardwood Lumber Exchange a few days ago, Chicago directly handles more than two and a half billion feet of lumber annually. This, in combination with the various lumber enterprises in various parts of the country handled by Chicago brains and capital would make the aggregate of Chicago lumber handling fully five billion feet each year. It is high time that these men get together on a strong business alliance and help each other, as is possible to do when they are all combined with a common interest.

Cincinnati is evidently trying to become the host of all the lumbermen in the country. For more than two months past it has either been getting ready to entertain visiting lumbermen, or doing its best to entertain them. The lumbermen of that city have succeeded most admirably, and now they of the Queen City are getting down to "brass tacks" and business. The hardwood men of that city have awakened to the value of CO-OPERATION—and notice that the word is all spelled in capitals.

An example of the current conditions in poplar values in Great Britain and Detroit was manifested recently when a wise Cleveland jobber made a considerable purchase of poplar panel boards at Liverpool, and reshipped the lumber across the ocean and to Detroit, Mich., and made a profit of five dollars a thousand. This is surely "going some" on distances for lumber transportation, but then poplar is popular in the big Wolverine city.

Endorsement of the report of the Hardwood Inspection Committee of the National Wholesale Lumber Dealers' Association of a demand for universal hardwood inspection, means another step toward this desideratum. This association has successfully handled out more vexatious problems than universal hardwood inspection, and who knows but it will assist in establishing that. More power to it!

Reports from several export centers of this country are indicative of very little or no improvement in lumber export conditions. The lumber business in both Great Britain and on the Continent is not nearly so good as it is here, but exporters are inclined to the belief that improved conditions will surely prevail before long.

## Pert, Pertinent and Impertinent

### Slightly Different

Along a winding stream they strolled,  
As in the years before;  
They stood beneath a stately beech  
That grew upon the shore.

"Look, Percy!" softly said the maid  
Her cheeks were all aglow—  
"Is this the tree on which you carved  
Our names so long ago?"

She pointed to the seams and scars  
Upon the smooth, gray bark,  
Where many a sentimental swain  
Had tried to make his mark.

Young Percy scanned the hieroglyphs,  
Then gave his cane a twirl;  
"My name is there, all right," he said,  
"But—'twas some other girl."

—C. W. T.

### What Matter?

If wine's a poison so is tea,  
Though in another shape.  
What matter whether one is killed  
By canister or grape?

—Thos. Hood.

The half of the world that gets along is  
unable to understand why the other half is  
always short.

## Look Out For Him

Investor: "This looks to me like a lemon."

### Experienced

"Am I the first girl you ever kissed?" asks the fair young thing from the refuge of his shoulder.

"Well," he replies, "after the way my arm just naturally slipped around your waist as you unconsciously leaned toward me, and my fingers

tilted your chin as you unconsciously lifted your head, and I bent forward where your lips were waiting, and didn't get the kiss either on your nose or your chin, but where it belonged—after all that, and with the knowledge of the subject which you have displayed, I shall say nothing, except that I leave the question to your own judgment."—Life.

### Depraved to the Last

"I may not be the ultimate consumer," said the fly, with its expiring gasp, as it fell into the soup, "but I seem to be in the ultimate consomme."—Chicago Tribune.

A woman should trust her husband, but it isn't always advisable to let him know it.

# AMERICAN FOREST TREES

EIGHTY-THIRD PAPER

Pacific Post Oak

*Quercus Garbana* Douglas

This species is distinctly an oak of the West and is grouped botanically and in commerce as white oak. It is considered the most important timber oak of the Pacific coast, where it attains considerable commercial value. The best growth is found in the valleys of the northern section of its range; it becomes small and shrubby in the south and on the mountain elevations, usually preferring dry, gravelly slopes. It is conceded to be the best substitute for true eastern white oak that grows on the Pacific.

Specifically the range of growth of this oak extends from Sonoma county, California, northward through Washington and Oregon and into British Columbia. The tree is most frequent along the coast and up the river valleys. In British Columbia it is confined almost exclusively to Vancouver.

Sudworth gives it the following names: White oak in California and Oregon; Oregon white oak in California; Pacific post oak, Oregon oak and western white oak in Oregon.

The tree resembles eastern post oak to an appreciable extent, and ranges in height from sixty to a hundred feet. It sometimes attains a diameter of three and one-half feet. The tree carries a broad and compact crown, especially when it is surrounded by a young, coniferous growth, which is its most favorable habitat, when natural pruning gets rid of the lower limbs and causes an outward, and later a pendulous growth of the upper part. The limbs are strong and heavy, as are the branches and twigs, the latter being pubescent and orange-color the first season, later becoming smooth. The bark is grayish-brown, with shallow fissures, the broad ridges being sometimes broken across, forming square plates which are covered with the grayish flakes or scales. As compared with those of eastern post oak, the buds are long and acute. They are coated with a red fuzz. The leaves show the typical post oak outline; are four to six inches long and are bi-laterally developed, having seven to nine coarse round lobes; the sinuses are rounded and rather shallow. The color is dark, lustrous green and the texture leathery.

With the other oaks this tree is grouped under monoecious plants, the staminate flowers growing in the form of hirsute aments, the pistillate ones being sessile and tomentose. The acorn is rather large, being about an inch and a quarter in length, and usually

about half as broad as long; it has a shallow cup covered with pointed, sometimes elongated, scales.

The wood is heavy, hard, compact and brittle, the heartwood dark brown and the sapwood thin and buff white, turning brown after cutting. A peculiar characteristic is seen in the lines of open ducts parallel to

group and has very distinct and rather broad annular rings. While it is extensively used in the West, it is very difficult to season, checking badly in the process, and sometimes taking two years to dry out properly. The young growth yields wood of great toughness, which is used in special industries. Wagon and carriage makers, ship builders, furniture manufacturers and coopers use the wood extensively, while it is also well suited to cabinet work and interior finish. As a fuel it is in great demand. One cubic foot of the wood, thoroughly dry, weighs 51½ pounds. It has a specific gravity of .8253. Using kilograms and square centimeters as units, the coefficient of elasticity is 95276; modulus of rupture, 935; longitudinal resistance, 463.

This species was named by Douglas in honor of Robert Garry, secretary of the Hudson Bay Company, who materially assisted scientific investigation in the Northwest.

## Barn Built around an Elm Tree

The proverbial veneration which New England people held for many of the noble trees in and about the yards surrounding their homes is strikingly demonstrated in the case of a man in Kennebunk, Maine, who, in selecting the site for his barn, found that a large elm tree was in the way. Reluctant to cut it down, he proceeded with the erection of his barn, building it around the tree, but leaving an open lattice work from the ground to the eaves so that the tree might have plenty of light and air. The base of the elm is said to be very nearly 6 ft. in diameter, but its age is uncertain. It is, however, conceded that when the British were in Kennebunk during the Revolutionary War this tree and its mate were large, well-grown shade trees. These were so highly prized by the owner that, as above stated, instead of cutting down one of them which happened to be in the way, he constructed his barn around it.

Another remarkable thing about this barn is the door at the end of the building, which is said to be an almost perfect representation of the stars and stripes.

It is to be hoped that the Kennebunk man in trying to extend the life of his big tree was successful. However, such attempts usually result disastrously. Trees are savages—they will not stand confinement.

# Builders of Lumber History

NUMBER LXXXIX

Robert Winfield Higbie

See Portrait Supplement

There are men and men. There are lumbermen and lumbermen. There are men who spend their life in the acquisition of money for themselves. There are other men who early in life realize that they can devote a goodly portion of their time in work for others and still achieve reasonable commercial profits for themselves.

Of this latter class is Robert Winfield Higbie of New York. For many years Mr. Higbie has been a close student of lumber affairs and has worked in alliance with his fellow lumbermen for the betterment of the totality of the trade. He has particularly interested himself in the lumber situation as he found it in the East, and among the eastern contingent has achieved a distinction for forethought, fairness, diplomacy, acumen and knowledge of his calling that culminated, at the recent annual meeting of the National Wholesale Lumber Dealers' Association, in his being elected the president of this organization.

Mr. Higbie is of Irish and Dutch ancestry, and was born March 5, 1863, on a farm at Jamaica, L. I. In this town the ancestors of Mr. Higbie settled more than two hundred and fifty years ago. His forebears have lived and died there respected and honored citizens, and he has always lived there, adding luster to the family name.

Mr. Higbie was graduated from the University of New York in 1882 and was the valedictorian of his class. His first employment was as a bank clerk. The lumber business struck his fancy, and on Dec. 1, 1885, he became a retail lumberman at Jamaica where he continued in business for eight years. In 1893 the firm of Marsh & Higbie was organized, with headquarters at 45 Broadway, New York. Two years later this firm was dissolved and Mr. Higbie continued in the wholesale hardwood lumber business. In 1904 the Robert W. Higbie Company, a corporation of which Mr. Higbie is president, purchased thirty-two thousand acres of Adirondack timber lands in St. Lawrence county, New York; built a railroad and a sawmill and broom handle factory at New Bridge and entered into the manufacture of northern woods, chiefly birch, cherry and hemlock. This is one of the best organized and most wisely handled operations in the north country. The general offices of the corporation are at 45 Broadway, New York city, where Mr. Higbie first established his connection with the hardwood lumber business.

Mr. Higbie has been long affiliated with the National Wholesale Lumber Dealers' Association and has occupied many positions of trust in connection with that organization. His indefatigable work, integrity, conservatism and skill in handling the various details

of its affairs have finally resulted in his election to the presidency.

Mr. Higbie with his wife and two sons, respectively 21 and 16 years of age, occupy a handsome home at Jamaica, where he has always resided.

He does not confine his energies entirely to lumber affairs, but interests himself in church, charitable and commercial enterprises in the locality of his home. He is president of the board of trustees of the First Presbyterian church of Jamaica, the oldest Presbyterian church of continued existence in America. He is a trustee of the Jamaica Savings bank, a director in the Long Island Bond & Mortgage Guaranty Company, a trustee of the Lumber Underwriters of New York, and also of the National Lumber Insurance Company of Buffalo.

The foregoing is a brief and rather inadequate sketch of the foremost hardwood lum-

berman of the Empire state. Mr. Higbie is still a young man and while already he has had wide experience and much success in lumber affairs, more may be promised for him and from him in the making of lumber history.

His recent election to the presidency of the National Wholesale Lumber Dealers' Association practically took the form of an ovation, and the reflection of the esteem in which his fellow members hold him is voiced by not only every man in the lumber trade who has the honor of his acquaintance, but more particularly by his social and business intimates in the Long Island town of Jamaica, where he was born, reared and has prospered.

It is with no little satisfaction that HARDWOOD RECORD publishes in this issue a portrait of Mr. Higbie as its supplement, illustrating a foremost type of "Builders of Lumber History."

## Handles for Bill Posters' Brushes and Lithograph Sticks

By H. B. ALEXANDER

There is one product of the handle factory which, though in daily use in every city and town of any size, is little observed by the ordinary individual, namely, handles for bill posting brushes. Until recent years the bill poster business in this country was in poor shape. There was no organization, and in most instances the work was but half done, and the advertiser who contracted for work of this sort had no means of telling whether the result would be satisfactory or not. For this reason the business was never very extensive.

A few years ago several of the most progressive bill posters of the country banded themselves into an association to further the interests of the trade, and from this nucleus they have built an organization which now practically controls the entire bill posting industry of the country. Originally all bill sticking was done by means of whitewash brushes or any other crude implement which happened to be handy, the handles being made of fishing poles, canes or ordinary squared stock, ripped out for them at local planing mills. Eventually a few of the most progressive operators began to lay in a supply of the different implements used in the trade, as a rule having brushes and handles built on the same general design, and using a uniform paste. In the end they put upon the market a sort of turned handle which was what suggested the present article.

About eight years ago the writer owned a half interest in a small handle factory which turned out broom handles and rods of various kinds. One of these progressive operators be-

fore referred to called at the office of this concern one day and gave a small order for white ash rods, one inch in diameter and eight feet long, offering 8 cents apiece for them in hundred lots. As at that time there was a plentiful supply of ash, the order was accepted and during the first year he was furnished with several hundred of these rods.

The next year ash was much scarcer, so much so that it was practically impossible to get enough to fill the orders that had already been booked, and the proposition was put to him that hickory handles be furnished in place of the ash used the year before. But he would not listen to the proposition, saying that hickory was not good enough to suit his purpose. In a subsequent interview it was ascertained that, while he was paying but 8 cents apiece for the rods delivered, he gave each rod a slight bend at the end and sold them for 50 cents apiece for bill posting purposes. The price of course was exorbitant, and it was very evident that the reason he did not want to use hickory rods was that they would last much too long, consequently his sales would be much less. The hard usage which handles of this sort receive causes the grain to split in a very short time, especially in the case of ash. The lasting qualities of hickory are well known, and it is admirably adapted to this sort of work, by reason of its springing quality as well as its toughness.

Shortly after this interview the firm purchased some fine second growth hickory, and after duly seasoning it, turned it into a large number of these handles and curved the ends. Samples exhibited at the bill posters' con-

ROBERT W. HIGBIE  
NEW YORK

vention shortly after were well received, and large orders were placed, for just half the price which had originally been charged. From then on till this day large orders have been sold every year.

There are firms on the market who are manufacturing bill posters' handles from gum and representing it to be hickory, and there are likewise a number of bill posters who can not tell the difference at first sight, though it is not long before the fact is revealed after the handles have been put in use. In using hickory the size of the handles can be greatly reduced on account of its superior elasticity, and in this way a very light, strong article can be turned out.

These handles can be made at any handle factory, with the proper facilities, at an average price of about 10 cents apiece, so it is very evident that the original price was an outrage, yet there are a number of bill posters who are still submitting to it. There are over three thousand bill posters in this country, and as the average handle will last a year, it is plainly to be seen that it does not take an unusually large number to satisfy the demand. But if one firm could control the output it would net a very fair profit, and the bill posters themselves would benefit by this condition as they would be sure of handles uniform in size and quality. The traveling circuses are among the largest consumers of this article, though they do not use as many as the local trade.

\* \* \*

The lithograph stick was the outcome of the difficulty which circus people always experienced in properly pasting their big lithographs in show windows. The common way of accomplishing this was to obtain a couple of ordinary lath from a planing mill and using one to hold the lithograph in place, rub the sticker fast with the other. It was a frequent occurrence for one of these laths to break, leaving a sharp, jagged edge which usually poked a hole through the sheet, thus spoiling it. When all the posting was finished in one town, the hangers usually threw away their stick, counting on being able to procure new ones at the next town at which they stopped.

A circus man was recently talking the matter over with a handle manufacturer, and it was not long before a stick had been planned which would answer the purpose and at the same time save expense in posting, and yet not be an expensive article itself. The stick planned would be of sufficient value, however, to insure against its being thrown away. A lot of five feet poplar rods were turned out, and after filling and varnishing were capped at the end with aluminum tubing two inches long. When polished up this afforded an excellent smooth edge, and one which would be sure of holding the sheet properly without tearing it, and also having a perfectly square edge would rub the sticker into place with one stroke. The rods were cut six feet long, and would reach the top of any ordinary window. Several of the large circuses gave them a

trial last year and expressed themselves as being very well pleased. They say that their hanging now costs less money and is done in better style than ever before.

\* \* \*

The average handle manufacturer could accomplish more and make larger profits if he would limit himself to the production of one or two types of handles. Most manufacturers do not follow this plan, and consequently the article turned out is often far below what it should be. The advantages of working along one line are the possibility of reducing everything to a definite system and keeping costs down to a minimum. This idea is not at all new and is applicable to almost any branch of industry.

The operator who attempts to turn out special types of handles and rods and is constantly changing his orders loses an immense amount of time in tearing down and setting up his lathe, and as in every other business, time is money and should not be wasted.

Broom manufacturers as a general rule should not attempt to turn out ash or hickory handles, or in fact anything but broom handles, and vice versa. There is a line of specialties, such as curtain poles, chair turnings, shade rollers, carpet sweeper handles and numerous other articles of this same general type, which can conveniently be grouped together, and should not be manufactured in connection with handles or rods of any other sort, as they are not of a nature which will admit of being worked out of the waste from the ordinary run of handle factories.

#### Rare Woods Found in the Forests of Bahia

Consul Pierre Paul Demers, of Bahia, submits the following report on the timber resources of the Brazilian state of Bahia and the facilities for lumbering operations:

The state is wonderfully rich in rare timbers, such as rosewood, mahogany and cedar. I have spent six weeks exploring the forests to the south of Bahia, and estimate that the zone lying between that port and the boundary of the neighboring state of Espirito Santo, or that stretch of territory between the thirteenth and nineteenth degrees of south latitude and the Atlantic ocean and the fourth degree of longitude, contains 12,000,000 acres of choice timber lands, which will yield an average of 10,000 feet board measure of cabinet wood per acre, or a total of 120,000,000,000 feet. A Canadian lumber expert recently sent to this zone classified the woods according to the different families to which they most nearly correspond or are better known on the American and English markets, and his estimates, which are extremely conservative, are as follows: Rosewood and better-class cabinet, 1 per cent; jacaranda cabiuna, of equal value, 5 per cent; mahogany, 10 per cent; oak, highly durable, 15 per cent; hickory, 20 per cent; buch, birch, maple, elm and ash of fine interior and exterior finishing qualities and of good cabinet values, 40 per cent; Spanish cedar, 9 per cent.

These classes embrace a fine range of high-class cabinet woods and a varied line of flooring and other timbers well adapted for interior and exterior finish.

This particular zone has a coast line of 300 miles, along which are located many ports, of which the most important are Camamu or Marahu, Barra de Rio de Contas, Ilheos, Canavieiras, Santa Cruz, Porto Seguro, Prado, Alcobaca, Caravellas and Porto Alegre. Of these, Camamu, Santa Cruz and Caravellas are deep-harbor ports. Not less than 19 rivers, many

of which are navigable for scores of miles, traverse these woodlands in an easterly direction, rendering the exploitation of the timber practicable, as a good part of the logs may be driven down the rivers to the ocean. The district adapts itself admirably to railroad construction wherever the rivers do not afford an adequate and expedient means of transportation.

The cost of cutting, hauling and transporting to foreign markets the timbers of the zone referred to, including the present export duties of 25 per cent ad valorem, would not exceed \$40 per 1,000 feet. They would bring between \$60 and \$500 per 1,000 feet, according to quality. The export duty of 25 per cent ad valorem on Bahian timbers is levied on a value fixed by government appraisers twice per month. The official value in Bahia of the most valuable timber, namely, jacaranda, or rosewood, is \$13.50 in United States currency per metric ton, thereby making the export duties levied \$3.38 per ton.

Another large timber zone is found in the extreme west of Bahia, between the state of Goyaz and the river of Sao Francisco, which is the greatest commercial artery of Bahia, being navigable for approximately 1,500 miles. The writer has not visited that zone, but it is estimated that 20,000,000 acres of timber lands are found there which will give on an average 8,000 feet of lumber to the acre, or a total of 160,000,000,000 feet b. m. of more or less the same quality and botanical families as that in the former zone. The latter territory, however, is much more difficult of exploitation than the former on account of its great distance from the ocean. To bring these timbers to foreign markets would mean transportation by river or land to the river Sao Francisco; thence on that river many hundred miles to Joazeiro, the terminus of navigation, and finally from there on the Bahia-Sao Francisco Railroad to Bahia, a distance of about 360 miles.

That railroad is owned by the Brazilian government, but is leased to a Brazilian for a period of years, and the freight rates are generally quite heavy. The Sao Francisco river is not navigable to the ocean on account of the Paulo Alfonso falls, which are said to be almost as large as the Niagara falls. There are no railroads tapping the timber zone last mentioned, and with the present available means of transportation the export of timbers therefrom is almost out of the question.

The larger part of the timber lands in Bahia is owned by the government and can be exploited only under government concessions and supervision, but large individual tracts, some of which contain as many as 1,000,000 acres, are found that can be purchased at \$1 to \$3 per acre, according to locality.

As a rule these timber lands are extremely fertile, and will produce abundantly all tropical products, such as coffee, cacao, rubber, bananas, cotton, sugar cane, rice, mandioc, corn, etc. In the littoral zone first mentioned 18 per cent of the world's production of cacao is grown, besides great quantities of coffee, corn and mandioc.

No modern lumber plants are operated in Bahia, but lately a good many American and Canadian lumbermen have been investigating the field, and one American company has lately been organized to operate on a 75,000-acre tract on the river Jucuruçu, which has been conceded to it by the Bahian government.

Ordinary building lumber is sold in the city of Bahia for as much as 9 and 10 cents per foot board measure.

Fire recently completely destroyed the plant of the C. E. Thames Veneer Company at Choctaw Point, Ala. Origin of the fire is unknown. The loss is estimated at \$6,000, with \$2,000 insurance.

THE BIG SPLASH DAM NEARLY COMPLETED

## THE STORY OF YELLOW POPLAR

Illustrations from Photographs by Editor Hardwood Record

### CHAPTER V

In telling the story of the unique and successful operations of the Yellow Poplar Lumber Company of Coal Grove, Ohio, it is pertinent that a chapter be devoted to the physical difficulties the company has encountered and overcome in annually delivering to its saw mills a great stock of poplar logs from remote mountain fastnesses with the aid only of streams that for many months in the year are simply rock strewn gorges. These logs are delivered distances of 130 to 170 miles.

As has before been noted in these articles, tributary to the lower reaches of the Big Sandy River for more than 100 miles was originally a splendid poplar timber area. With the denudation of this region the remaining poplar stumpage was in extreme eastern Kentucky and over the state line into Virginia. This timber was remote from railroads, and the only available means of transportation were these rough and rock strewn mountain torrents which afforded floating water for logs for a few days' time in an occasional season, and then for several years contained so little water that it was impossible to utilize them in the natural state for the delivery of logs.

Early attempts to log the upper reaches of the Big Sandy resulted in the delivery of but a modicum of the logs put into the stream year after year, with a tremendous waste in timber from borers, rotten sap and even rotted logs which has constituted a heavy loss.

The most recent logging operations of the Yellow Poplar Lumber Company have been in the mountains above the great canyon of the Russell fork of the Big Sandy, where it broke through the Cumberland mountains. This great canyon is encompassed by cliffs often 1,500 feet in height, and the bed of the stream is simply one mass of great rocks—fallen sections of the cliffs.

Getting logs through a five mile stretch of a stream like this is an engineering problem that has baffled the lumbermen of the Big Sandy region for many years, but it has

remained for the Yellow Poplar Lumber Company to overcome the difficulties and that most successfully.

In seven months this company erected the largest splash dam for log driving purposes that has ever been built. The dam is located in Dickinson county, Virginia, on Russell Fork, the main stem of the Big Sandy river, just below the mouth of Bart's Lick and Pound river, tributaries to this stream.

The dam is anchored into solid rock at both ends and at the base. Its extreme length is 360 feet and it contains five "flues" or flumes, each forty feet wide. These flues

are temporarily filled with an ingenious arrangement of timbers, spars and planking to hold back the water and logs.

The pictures with which this article is illustrated show the dam in process of construction, the false work of the dam in place, with the head of water and logs above it, and two views of the dam in process of "splashing."

Primarily, the base for the dam was established by blasting out solid rock in the river bottom at a depth of five feet. This base was then drilled and sections of 60-pound railroad steel set upon end to form the

THE DAM READY FOR A "SPLASH" LOOKING FROM BELOW THE DAM.

THE BIG SPLASH DAM IN OPERATION

foundation of the several concrete piers, which are 10 feet wide, 32 feet long at the base, sloping to the top, which is 10x20 feet in size. The end piers are nearly 100 feet long. The upper end of the piers have a five-foot V-shaped nose or extension to ward off the logs and lessen the impact of the water. Thus the piers are mounted on a sub-dam five feet above the mean bed of the river, and anchored to the solid rock of the river bed. The dam has a height of twenty-five feet and backs water up Russell Fork for about one and one-third miles. The total cost of the structure was about \$40,000.

The cement for this dam was manufactured at Ironton, Ohio, and it took forty carloads to build the structure. The cement was shipped by rail to Elkhorn City, Ky., and then transferred by wagon over two mountain ridges, on roads that are scarcely worthy of the name, to the site of the dam. Forty mules, twenty wagons and drivers have been constantly employed in this transfer for seven months. The cost of the wagoning of

the cement alone was 40 cents a hundred.

The formula employed in making the concrete for the dam was to every barrel of cement (3.8 cubic feet) 29.50 cubic feet of sand, with 19 cubic feet of crushed sandstone. One feature that materially lessened the cost of the structure was that the sandstone was found in the bluffs immediately beside the dam site, and the sand was secured from the river bottom at the point. Furthermore, a coal vein was tapped almost immediately above the dam which furnished the fuel with which to operate the stone crushers and the machinery necessary to transfer the buckets of concrete to the work.

Referring particularly to the ingenious arrangement of false work of the five flues of the dam, it may be stated that from the top of each cement pier project 18-inch steel I-beams. A big poplar stick some three feet in diameter rests solidly against the I-beam on one pier, while between the I-beam on the opposite pier at the end of the poplar stick is a space of about five feet. Interposed in

this space is a chunk of round timber some ten or twelve inches in diameter, which in splash dam parlance is known as the "trigger." Resting against the big poplar stick at their upper ends and against a 5-inch notch in the toe sill of the dam at their lower ends are flattened "spars" of beech twenty-seven feet in length and placed about two feet apart. At their tops these spars are loosely fastened to the big poplar sticks with immense iron hooks, the lower ends of the hooks having chains bolted back to the spars. Across the surface of the lower half of the spars are placed 20-foot oak plank-ing one and one-half inches thick, and on the upper half 1-inch boards are used. These "splash boards," as they are called, have holes bored in one end and ropes knotted thereon, and fastened to the structure above. Each of the five flues are thus equipped, and when a head of water has been secured the dam is released by boring a hole in each of the five triggers, inserting a dynamite stick and discharging them simultaneously by means of an electric battery. The dynamite stick breaks up the trigger. The weight of water forces one end of each big poplar stick back down stream five feet against the I-beam. This action, by the aid of the iron hooks and chains at the top of the spars, draws them from their footings on the toe-sill and the logs and water go out under the floating and suspended false work with a rush.

The great mass of 30,000,000 feet of logs held above this dam are not all discharged at one time, but are held back in the slack water by means of booms. Only 600 to 1,000 sticks of timber are released on each splash. These splashes are made as fast as water accumulates above the dam and are usually three or four days apart.

The dam affords a depth of water from twelve to sixteen feet through the narrow gorge of the "breaks of the Big Sandy," and while one splash may leave a lodgment of some of the logs, each succeeding splash drives them further and further down the stream. The immense gathering of logs, illustrated in last issue of RECORD, has now been practically splashed out into floating water. Large deliveries of rafts from Elkhorn City and Pikeville, Ky., have already been made at the company's mills at Coal Grove, Ohio.

The company is now operating its big double band saw mill at Coal Grove day and night.

The problem of splash hammer has been solved!

TURNING A "BLUE HEAD" THROUGH THE DAM TO SPLASH OUT A JAM BELOW

## ***Eighteenth Annual National Wholesale Lumber Dealers' Association***

The opening session of the eighteenth annual of the National Wholesale Lumber Dealers' Association, at the Hotel Sinton, Cincinnati, on March 2, was well attended. There was a total attendance of 330.

This association has a membership of 390 in twenty-eight states and Canada, as was announced in the program. This membership transacted a total volume of business for the year 1909 of \$298,500,000; the total quantity of lumber handled being 14,290,000,000 feet, requiring 877,975 cars for transportation, the balance of 7,798,250,000 feet being transported by water, which gives a clear idea of the importance of this organization.

Previous to the regular business of the convention, President George F. Craig of Philadelphia introduced several prominent men of Cincinnati who welcomed the association in behalf of that city. Mayor Schwab, J. J. Heekin of the Chamber of Commerce, and Clifford S. Walker, president of the Lumbermen's Club, enthusiastically welcomed the attendants to Cincinnati.

Following these speeches President Craig called for the general roll-call of members

and done, is not this the real substructure of business prosperity?

With one feature of the prosperity of 1906 we can well dispense, and the fact that we have not had for two years to contend with a shortage in car supply forms a silver lining to the cloud which envelops the months which we hope are now past. Guided by their former experience, the railroads should be better able to cope with the situation and prevent, in its most severe phase at least, a repetition of conditions which so seriously hampered all shippers of freight in bulk.

The government has apparently abandoned its efforts to discover the trust microbe in the corpus of the lumber industry, and has consoled itself by levying a special tax on our pet practice of incorporating under the laws of New Jersey or Delaware.

The tariff has been agitated and settled, and while we may be able to hold the reduction of fifty cents responsible for a small part of unsatisfactory prices, it would require more than a Philadelphia lawyer to saddle it with the full burden of our woes.

Nor is it probable that the doctrine, "From the maker to the consumer," can be relied on to solve the problem of narrow margins in time of business depression. Alluring as it appears in theory, in practice it would ultimately work back to the old question of supply and demand, and in the final adjustment the manufacturer might find difficulty in establishing his right to be considered as the "maker" of the forest products.

The work of the association has gone on with satisfactory regularity, but without especial brilliancy, and on this line there is little to record beyond the facts and figures set down in the very able and ample reports of the chairmen of the several committees. I can, however, say a few words which would not perhaps become the modesty of the committees and officers to say for themselves.

Financially, we are closing the year with an increased balance over the previous year, due partly to the fact that there have been no extraordinary expenditures. The revenues have been well maintained, and with some slight necessary exceptions the ordinary expenses have not increased. It might be well for the association to consider voting life tenure of office to the present competent and genial guardian of the exchequer, whose only glaring fault is his predisposition to arrive late at all meetings.

The Bureau of Information moves forward as regularly as heretofore, preserving its high mark of efficiency, and is still the greatest source of direct and computable benefit to our members.

It is only to be regretted that all of our members do not appreciate its advantages, as there is almost no other conceivable reason why at least ninety per cent of the total membership is not included in the bureau. Indeed, a plan to extend the privileges of the bureau to all members of the association, by increasing the association dues to cover this service to all, would seem far from unreasonable to those who have profited by the reports.

The Collection Department is most gratifying in results obtained as often by moral suasion and the prestige of the association as by formal legal action. Not infrequently its benefits are conferred on the debtor as well as on the creditor.

The Transportation Bureau, from an experiment, has become a necessity. Its advantages are not to be computed in the ratio of its income to its expenses, but by the unrecorded value of the information and assistance which it furnishes free of charge to a large number of our members who avail themselves of its experience and coöperation. The members who have not consulted this bureau should make a point of doing so at the first opportunity.

The secretary and his assistants are to be congratulated and commended for the success of the detail work of these bureaus.

To arbitrate or not to arbitrate is a question which sometimes disturbs us, due to an inherent belief in our own infallibility. But granted that we are altogether right and the other side altogether wrong, and aside from the advantages gained in time and expense saved, is it not more reasonable to expect an impartial and intelligent verdict from a jury of our fellow members than from the average twelve men who sit in judgment in our civil courts? Arbitration can certainly lay claim to modernness of method and the spirit of fraternity.

The benefits of the good work of the Fire Insurance Committee are always with us and we must not let familiarity beset lack of appreciation. It is only to be regretted that our co-workers, the lumber insuring companies, have not found some means of establishing rates based on actual conditions and their own experience, rather than on the arbitrary and often unjust inspections of the old line companies.

The report of the Marine Insurance Committee will show an equal opportunity for economy and coöperation in its branch of underwriting, and those of us who are most directly interested in the subject of coastwise risks unite in hoping that some means may be devised for obtaining on marine business the same benefits as accrue to the holders of fire policies.

There would seem to be a place also for mutual underwriting in the line of employers' liability, in view, perhaps, not so much of the high rates charged as of the frequently unsatisfactory character of the indemnity secured.

For the Special Membership Committee we claim more than ordinary success in the face of adverse circumstances, and we do no injustice to the other members of that committee in particularly commending the untiring zeal and unfagging energy of the chairman, Gouverneur E. Smith. To have increased the roll since the last annual meeting may not be appreciated by those who have not participated in the effort, but it draws from your president the earnest hope that the incoming administration may be as fortunate in the selection of the next committee.

Forestry is progressing, not from the lumberman down to the theorist, but from the theorist up to the lumberman. The fact that our mode of procedure is not so much at fault as the lack of public education and conditions warranting recommended methods is more and more recognized. Lumbering is our business; all business is for profit, and until trees can be planted and matured at a profit through increase of stumpage values and under legislation which does not tax them out of existence, private enterprise will

GEO. F. CRAIG, PHILADELPHIA, RETIRING PRESIDENT

and for the reading of the minutes of the previous meeting. Both of these formalities were dispensed with by vote of the association, and the president then proceeded with his annual address, which was as follows:

### **Address of President.**

It has been a custom which this year it might be well to honor in the breach, rather than in the observance, for the president's report to record the condition of the past year's business and to prophesy as to the future.

The year 1909 did not measure up to the hopes and expectations which were entertained for it, and while in volume of business it was fairly satisfactory, as to conditions and prices it left much to be desired. Perhaps its most prominent feature was irregularity, and while on several occasions it showed signs of fulfilling its duty of returning to something of the halcyon days of 1905 and 1906, it invariably lost confidence and weakened at the crucial moment. A glance at the report made by the president at the fourteenth annual meeting would almost lead to the belief that he was the victim of an Utopian hallucination.

For the coming year there is promise based not so much, perhaps, on tangible facts and promises, as on general confidence, and, all said

F. R. BABCOCK, PITTSBURG, FIRST VICE-PRESIDENT

not be attracted to this form of investment for the benefit of future generations.

In the matter of hardwood inspection, we have stood firm in our resolutions to occupy a neutral position, but prepared to confer upon unanimous request of the purely hardwood interests, and to endorse any rules which they may unite in adopting for the uniform and universal grading of their product.

The code of ethics was revised at a meeting of the American Lumber Trades Congress held on June 8, 1909. Notwithstanding some criticism, and perhaps justifiable criticism, it is nevertheless the consensus of opinion of all branches of the trade. Other organizations have attempted to amend it or to formulate other rules for the regulation of trade, but these fall of their purpose in that they can never be more than an expression of personal opinion or preference. A true code must be generally accepted and held to govern in the absence of other mutual arrangements, and we could do not better than to endorse the revised code, relying on the wisdom of the majority for further revision as conditions demand them or the change of general opinion warrants them.

The Legislative Committee, the Railroad and Transportation Committee and the Special Congressional Committee will each report fully in its own department and I would commend their reports to your thoughtful consideration.

The report of the Special Congressional Committee will be interesting to shippers who use largely flat and gondola cars. The hearing before the Committee of Interstate and Foreign Commerce of the House of Representatives emphasized the fact that, to the unprofessional mind at least, our contention has the merits of fairness and reasonableness. The testimony introduced by the railroads would also seem to indicate that our efforts have educated them to a degree, and while we must not expect too much in the way of immediate compliance, I believe that a quiet and persistent campaign, which, with the cooperation of other associations, can be conducted at slight expense, will ultimately and within a reasonable time obtain for us the concessions desired.

We again welcome the delegates from allied associations and tender them the freedom of our meetings. We have no secrets and no antagonisms. During the past year our trade relations have been highly satisfactory and particularly free from complaints. In one instance only has there been vigorous protest from a retail association, and in that case, without action on our part, our too hasty accuser withdrew from the contest and left us in possession of the field.

The several meetings of the Executive Committee and of the Board of Trustees have been well attended, and I desire to thank the members of these bodies, as well as the chairmen and members of all committees, the officers of the association and their assistants, for their loyal support and helpful assistance throughout the passing administration.

We have met in Cincinnati through the courtesy and hospitality of its lumbermen and citizens and from a desire, after many years, to again touch elbows with the vigorous and kindly inhabitants of this great and prosperous section. Our thanks are due to our members and friends who have helped to make this meeting possible. May we leave many new friends behind us and

received, after which Secretary Eugene F. Perry gave his report as follows:

#### Secretary's Report

It has fallen to your secretary each year to report to you as clearly as possible, covering such details of the year's work of the association as we believe should be made a matter of record, and also to present to you in concise form the results of the operation of the plans formulated at previous meetings, and at the direction of the Board of Trustees and Executive Committee at their called meetings.

The association work is so diversified and constant that its history can only be read from the compilation of reports made at the annual meetings. Outside of the reports assembled for use in our Credit Department very few statistics are gathered, such figures and details being left to be used and elaborated upon by other specializing associations organized largely with such definite propositions as their basic plan and scope of work.

We have, however, made an effort to again give you (as shown on your printed program) a broad suggestion of the volume of business, value, necessities of transportation, etc., of the nearly four hundred members of this association. We have been somewhat surprised to find the claim being made, that in 1909 as much or more lumber has been cut and manufactured in the United States than in any year in the history of the lumber trade. Some figures claimed are as much as fifty billion feet. Of course, we all know that the value expressed in dollars would not compare as favorably, but the amount claimed seems to be reliably substantiated. These suggested figures are valuable largely because they indicate an increasing business, and offset some of the pessimistic statements made at times, regarding the lumber business, as to permanency.

During times which are not considered to be boom periods we all feel the constraint which leads us to first consider self-preservation, and therefore are not willing contributors to the good welfare of our fellows. This past year rather comes under this caption and we have, therefore, found it harder than in some previous years to accomplish satisfactorily the work laid out or presented to us for consideration. Then, too, our association is being constantly called upon to render help in matters which are national or very general in character, and not to be considered strictly lumber problems; thus we are constantly broadening the scope of work and calling into action the experience, diplomacy and power of the best men our association can enlist.

Many of the recommendations I have to offer may be more fully covered by your committee reports, but having come to our attention officially, should be at least referred to here.

First of importance, possibly, is that of the conservation of our national resources, which is being very ably handled by an organization formed with that as their basis of appeal. It is my opinion that as an organization we also should strongly endorse the movement and plan to actively cooperate with such other organizations as may be working toward the same end. The subject is broad and, as lumbermen as well as citizens, we are vitally interested.

I also ask for a more careful consideration by the individual members of the movement for uniform state laws, especially as they affect commercial acts, including uniform sales laws, uniform stock transfer laws, negotiable instrument laws, warehouse receipts, bills of lading and even divorce laws, etc., etc., all very forcibly presented by the American Bar Association, and more recently strongly endorsed by the President of the United States, and also by the National Civic Federation and other trade and civic organizations. A warehouse receipt ought to mean the same in New Orleans as it does in Chicago; the process of determining the value or legality of a negotiable instrument should be the same the country over. The importance of uniform laws is emphasized in our badly mixed divorce laws, and our commercial laws are even worse. If one is married in New York he ought to be recognized as being married when in Ohio; or a man ought to be able to make his will with equal safety and ease whether in Oregon or Maine. To bring about uniform laws requires personal effort as well as united effort. Our association has been doing its best to help along, and should continue to urge these uniform laws wherever they affect business dealings. Recent decisions as to status of incorporated companies doing business without a so-called license in some of the states have great bearing on the multiplicity of laws affecting corporations, and have a very vital effect on the safety of your transactions with those outside of your home state. I emphasize these points because the field of business, as done by the wholesaler, is constantly broadening and becoming more difficult to cultivate. Some of us are opposed to the proposed federal incorporation laws, and their attempt to correct present abuses in some of your state laws.

#### CAR STAKES

At last year's meeting you appointed a special committee to continue the car stake agitation,

and the Board of Trustees at the suggestion of the committee invited the cooperation of all lumber organizations in pursuing this matter before Congress, through the introduction of a special amending bill to the interstate commerce laws. Some of the associations and some of you members do not warm up to this proposition as I am sure they and you should. The argument, of no direct interest, is not association spirit and is not the position we should take on any proposition for the good of the trade in general. The special committee has done excellent work and their report will interest you, I am sure. "We will win out on the car stake proposition if it takes all summer," someone has applied to this fight, and I agree, because we are working in a right cause and for the general welfare of the people.

#### CODE OF TRADE ETHICS

Your delegates attended the Lumber Trades Congress at Chicago last June and helped to formulate and approve, subject to your confirmation here, a code of trade ethics to be used as a basis of trading, binding only from a moral standpoint now, but which, when finally worked out, will, because of usage, become trade law. This code as at present constituted, may not meet with your full unanimous approval, but as after a two days' session in Chicago it received the unanimous approval of those at the congress, representing manufacturers, wholesalers, retailers and consumers, you can feel assured that it is as nearly practical as is possible at the present time. Some very good minor changes have been suggested, and its favorable operation proves its necessity, and I recommend endorsement here and reference to Board of Trustees with power.

#### TERMS OF SALE

At this point I refer to one other proposition, in an effort to avoid a very considerable amount of trouble and confusion over disputed deliveries,

E. F. PERRY, NEW YORK, SECRETARY

N. H. WALCOTT, PROVIDENCE, TRUSTEE

welcome all of them as members at our next annual meeting.

Several of our members have been taken from us by death and among them it grieves me to record the loss of one of our former trustees, Rudolph S. Cohn of Norfolk, Va. Knowing Mr. Cohn through our intercourse on the board, I can say for him what is no doubt true of all of the others, that our association has lost a loyal friend and the lumber trade an upright and honorable representative.

I regret that as our president for the past year I have but little of personal accomplishment to record, but, whatever has been lacking in brilliancy as executive I trust that I have not failed in loyalty to our association, nor in my promise to give you of the best that was in me. Of your undeserved kindness I shall always be mindful, and for your patience and consideration I cannot be sufficiently thankful. A greater man has written to express what I would say: "It has been a just ground of pride to me that I have had a share in the administrative work of this organization and the benefit of its members' friendship. My association with its officers, past and present, has been an inspiration, and if, in any way, I have helped such men in their endeavors, surely I have not altogether failed."

May success attend the association and each one of you.

The president's address was enthusiastically

damaged or delayed in transit shipments, demurrage, charges, etc., and that is, that every member of this association adopt a uniform method of quoting your prices, and I strongly urge that all quotations be made f. o. b. shipping point, freight allowed and guaranteed to delivery point, and thereby definitely settle this question of ownership in transit, and who is responsible for delays in transit, etc. The buyer will welcome a uniform method and the elimination of the uncertainty of ownership, and it can be accomplished by printing your contract clause in the body part of every letter you send out. Fifty per cent of the members are already doing it, and if all will, some of our disputes will become matters of history only. Sample letters are in the hall, and I recommend this form for adoption as the National Wholesale Lumber Dealers' Association form of quoting prices.

#### RAILROAD RATE PROBLEMS

The workings of the Interstate Commerce Commission has undoubtedly made more certain the status of railroad matters, but there still remains many very obnoxious practices, not the least of which is the rate quoting system. First, it is difficult to secure all the up-to-date tariffs, and when once secured, it takes an experienced man to read them and make sure he has obtained the rate his lumber will finally be billed at, and the lack of responsibility imposed upon freight agents, to protect a rate named to the shipper when he

desires to quote delivered price on his lumber, should be remedied. A large amount of money is now involved in claims based on incorrect rates quoted by freight agents, but against whose mistakes there is no redress under the present interstate commerce laws.

#### TRADE RELATIONS

The ability of sellers, rogues and others to obtain quotations and get lumber shipped to themselves or to those who are not considered to be within the class whose requirements entitle them to buy at wholesale, makes the problem of trade relations as difficult as ever to solve, and while for the past few years the recognized trade has been quite satisfactorily defined, the situation is not ideal, and greater cooperation is needed. Our members have shown clearly their desire to be fair to the retail customers, and few complaints have been lodged, and I am pleased to observe the kindly feeling shown by our retail associations and friends, but whom I, at the same time, feel constrained to warn against the apathy which may follow inactivity, trades relations principles or lack of that reciprocity which binds us together as interested tradesmen.

A further word regarding forestry conservation and the so-called lumber trust: As men, citizens of the great United States, and as lumbermen particularly, engaged in the greatest interstate business in the world, we must not sit by and allow our dignity and honest position to be assailed, as has been done during the past couple and more years. Be serious in discussing the lumber business with your friends and with representatives of the press; make yourselves a special local committee, tell your local newspaper editor the truth about the lumber business, growth of timber, logging, manufacturing and marketing the product, the keen business foresight needed to get the finished product to the house builder at the minimum of expense. Let him know that the competition is keen, and that competition keeps the cost down in the lumber business just as does competition keep down the cost of everything we use. This criticism and ridicule of those engaged in the lumber business has been fostered rather than refuted by us lumbermen not taking the right attitude against

not be heavy, and its uses are many and will be a valuable record in later years.

We have been strongly urged to take active part in movements on foot regarding national tariff commission, federal corporation tax, bulk law proposition as fostered by the National Association of Credit Men, Atlantic deep water ways congress, uniform inspection of lumber, etc. All of these are having the attention of the Board of Trustees and committees to whom referred, and as found practical and in our line will be brought to your attention for proper action and support.

#### MEMBERSHIP

The Membership Committee has been active this year in its solicitation of new members and with very satisfactory results, especially in view of general trade conditions. While our nearly 400 members cover twenty-eight states and territories and Canada, quite a large percentage are in the states east of the city of Cincinnati, and we have made special effort to include these middle west manufacturers and wholesalers and have been reasonably successful in this respect, and as the leveling up of freight rates and the available timber lands leads the center of the lumber industry further west and south, these dealers and manufacturers will appreciate the benefits of a closer alliance with others in the same line, and the value of the accumulated experience and information now within the association. Personally I am agreeably surprised and pleased that we have made such a splendid gain this year.

Figures are as follows:

Shifting our convention from Washington, where we have met several years, to Cincinnati this year has for the past couple of months given us considerable added office work, and we hope our members in this section will help us in our meetings and will help us to plan for the greatest good possible out of next year's work.

Our association is well equipped to take up forcibly any work with individuals, clubs and other associations which may be done on a cooperative basis, and as many of our members are also members of other local organizations, I trust you may always keep this in mind, so that the opportunity for any good we may do with present equipment may not be lost to us. The field is large and organizations, though numerous, with but few exceptions conflict very little with each other's operations. It is because of this attitude on our part that we have been able to do what we have in the past.

I am pleased to report that the association work for the year has gone along smoothly and there are no disturbing features to be reported, and so far as I can observe the association is brought up to this point all in good order.

Respectfully submitted,

E. F. PERRY, Secretary.

The secretary's report was duly passed upon and filed.

A. L. Stone then reported for the Board of Managers of the Bureau of Information:

#### Report of Board of Managers of Bureau of Information

The Board of Managers of the Bureau of Information is pleased to report that its work the past year shows its continued growth in efficiency and consequent value to the members of the association.

During the past twelve months claims amounting to nearly a quarter of a million dollars have been filed for collection; of these, a large percentage has been collected and returned by our members. The earnings in fees amount to some \$3,600, a slight gain over a year ago. The collection of this large amount of money for our members very forcibly emphasized not only its capacity to handle slow or bad accounts, but particularly that our members should use our credit reports more, and gain therefrom the special information which is always at their disposal, thereby reducing their claims very materially.

Those of our members who are guided by these credit reports have learned their special value in determining their lines of credit. They also know with what special care they are compiled,

to the end that justice in every instance shall be rendered and signs of caution only pointed out when, all the facts carefully weighed, determine them the part of prudence.

Our members, generally, have given us of their information in the making up of these reports with great willingness and care to reflect the facts in each instance, so that all of our subscribers have learned that they can be depended on and taken at their face value.

Of the entire membership, 207 are subscribers to the Bureau of Information and these have access to our files of nearly thirty thousand reports, which are revised from time to time and are continually kept in a fresh condition. These reports cover a very large territory, including the middle West.

The conditions during the past year have again tested out our system, and it has been amply demonstrated that the bureau is handling its work in the most practical manner to give the greatest value to its subscribers.

In thanking them for their continued assistance in the working out of these details, the board wishes, particularly, to emphasize the fact to the nonsubscribers in the association who do not use the bureau, that they are losing the assistance of one of the most valuable assets which is at their command, for no reports obtainable can be compared with those of this association in dependable information, in simple statement of fact, unprejudiced by any misleading or unwarranted conclusions.

It again urges all of our members to make use of the bureau and get all the good obtainable from this source.

A. L. STONE, Chairman.

The chair next introduced George H. Holt of Chicago, chairman of the Central Committee on Fire Insurance Supervision, who talked on fire insurance supervision. Excerpts from his remarks follow:

J. V. STIMSON, HUNTINGBURG, TRUSTEE

#### Mr. Holt's Talk on Fire Insurance Inspection

Gentlemen, the position of chairman of the central committee (so called) on fire insurance supervision came to me at the request of a number of the local representatives with headquarters in Chicago and a number of different national organizations of trades of different kinds.

We are convinced that the present system of fire insurance regulation operates as a gross injustice to and a handicap upon all commerce and industry, not only in Illinois but throughout the United States. Even though the lumber business itself, for example, is not concerned directly with foreign commerce, it cannot prosper as it ought if industry as a whole is handicapped by charges and expenses from which its competitors in other countries are free. The figures with which we are dealing are of enormous size and of almost inconceivable value. The amount of money taken out of industry and commerce in the way of insurance premiums amounts to \$4,000,000,000, which will be diverted from commerce into insurance premiums in the course of the next ten years unless something is done to change the situation.

Our competitors abroad get their insurance for one-tenth of our cost. If we spend \$300,000,000 a year they spend \$30,000,000, a handicap in their favor of \$270,000,000; or, taking the 10-

F. S. UNDERHILL, PHILADELPHIA, TRUSTEE

that ordinary citizen who knows nothing of the business and its intricacies; in this way the outsider gets very wrong impressions. Lumbermen should not be put on the defensive, the business is as honorable and fair as any, and an aggressive attitude in this direction would soon change present unjust criticism and ridicule, and forestall obnoxious laws because of the lack of knowledge and interest.

#### CANADA MEMBERS

Our members in Canada continue to avail themselves of the membership privileges, and each year this business seems to closer interweave itself with that of the states, and we have seen almost a reversal of conditions the past few years, large quantities of certain kinds of lumber being constantly shipped to Canada.

In my opinion the association should endorse the efforts of the United States Department of Agriculture (Forest Service) in the effort to prepare a practical record of wholesale prices of lumber, based on actual sales f. o. b. each market. The expense of compiling these prices can-

year period, say that we spend \$4,000,000,000, they will spend \$400,000,000. These figures are appalling in their significance.

The committee of the national board, which prepared the "universal" schedule, has this to say: "The committee believes that it would be wise to let the property owner see how his rate is computed in every case. We believe that it would be injudicious, not to say unfair, to a property owner to refuse to let him see how his rate is computed. \* \* \* If the schedule is correctly made, there will be as much profit for the underwriter in the poorer classes, at the higher rate of premium, as in the better classes, at the lower rates of premium."

Mr. Bissell, vice president of the Hartford Fire Insurance Company, says: "No mathematical basis exists or can exist. Rates are and necessarily must be based on judgment. Insurance rates as now made are those figures which (having due regard to competition ever present and readily intensified) the general underwriting opinion believes to be fairly remunerative."

Notice that he does not say fair to the property owner or accurately measured by cost, or scientifically arrived at in the interest of the public, but "fairly remunerative."

It is useless to talk to us about insurance rates being unprofitable unless the insurance companies place before us the statistics which show that they are unprofitable and allow us to make a thorough investigation, and find out what charges are included under the different heads, and determine whether those charges are proper or improper, whether they ought to be left in, or ought to be taken out, whether they produce too much revenue or too little revenue. The companies, for example, report their loss experience in their annual statements, but we do not know what items have been put into that loss experience that ought to have been put elsewhere. They enter up an expense account which absorbs the rest of the premium, but we have no access to the details. We want to see those details, and we are entitled to see them, because

wish to make us believe that they are doing the right thing and doing it upon a scientific basis?

The proper rate would buy rather than force the improvement of the risk and help to lessen the fire loss, because it would pay to make the improvement. If the difference in the rate before improvement and after improvement is sufficient to pay for the improvement in a short time, nobody could afford to neglect the improvement. Let me give you some examples from personal experience. Through my connection with the Policyholders' Union, an organization handling insurance problems expertly for a large number of customers, I was brought in contact with a large number of cases, in which the difference in rate between sprinklered and unsprinklered properties would pay for the equipment in three or four years' time, and yet through the opposition of the insurance agents, and the hesitation on the part of the owner to divert the capital from his business the equipment was not put in. I undertook to put in such equipment and take my pay out of the savings, allowing a small margin of profit for my service and risk. In the last year I put in about \$200,000 worth of such equipment in properties covering \$4,500,000 of insurance, and the saving in the rate on that amount of insurance was over \$63,000 per annum. These equipments will pay for themselves out of the savings in a little less than three years of elapsed time, and thereafter this \$63,000 will be retained by my customers for their own business uses, instead of being diverted to New England and old England, as insurance premiums. I have under way \$400,000 worth of such equipment, and the savings, dollar for dollar, will equal those made last year. We were able to bring about this saving, in spite of the opposition of the agents, through establishing competitive conditions in the risk.

Imagine this condition multiplied by the possibilities of the situation and you will see the fire loss in the United States cut down \$100,000,000 within three years, without the necessity of any change in the building ordinances. In addition to this saving would be the reduced cost of fire departments and water service, the elimination to a great extent of the conflagration hazard, the exposure hazard and the interruption of business caused by fires.

Only give us a correct record of fire losses, according to hazard, and rates will be based upon cost of insuring the property, and not upon "what the traffic will bear" as a business proposition.

We are not afraid of state-made rates, if they are based upon adequate information and expert analysis and just administration, but we do not advocate state-made rates at this time. We are talking about state supervision, which will provide the necessary conditions, under which just and equitable, permanent and uniform results may be obtained. We do not want rates made by politicians, either insurance politicians or other. We want the hazard to measure the rate, and we believe that competition will do the rest. I beg to suggest that your association, through some committee, thoroughly investigate the proposition, and that throughout the different states here represented the local state organizations may be made acquainted with conditions that exist and be invited to cooperate for their correction.

Following Mr. Holt's comprehensive discussion, he was tendered a vote of thanks by the association, and resolutions embodying the salient features of his talk were referred to the Committee on Resolutions, by proper procedure of the session.

The report of the superintendent of the Bureau of Information, which was read by Manager W. W. Schupner, followed:

#### Report of Bureau of Information

A complete or comprehensive report of the work of the Bureau of Information, and the results of a compilation of a great mass of intricate details, should include also the individual expressions or opinions of those who have reaped the benefits. During the year just closed this one department of the association has compiled more data, revised more reports, and kept in closer touch with the needs of its subscribers than in any previous year. It naturally follows that the collated experiences of the subscribers are really essential in portraying the bureau's usefulness and ability to meet growing and changing conditions, and unquestionably, a discussion here by those who depend upon the reliability and efficiency of the bureau would do more to acquaint the convention with the system than mere detailed report of a year's office work, and more especially if those subscribers who have used the bureau during its fifteen years of existence participated in the discussion.

It does not take much of an imaginative mind to appreciate the difficulties the bureau has had to meet and overcome the past year. That the period has been a trying one for many of your customers is clearly demonstrated by financial statements and numerous confidential communica-

tions received in the course of revising and re-revising our reports. These conditions have not been local, but appear to have obtained quite generally, and the confidence imposed in the bureau by the trade, for proper discretion in using such data, has enabled the subscribers to secure information which could not otherwise be obtained.

This is one of the bureau's best arguments to nonsubscribers, that of trade confidence, and while the growth in members has been small, the character and quality of the service has perceptibly improved.

Our reports in the Bureau of Information have increased from 15,500 in 1904 to 27,000, the number of reports on file today. This increase has been slow but substantial, and fully up to the requirements of the members, and the percentage of new reports accumulated during the past few years means more than the figures would indicate. The scope of the bureau's work has grown so that it now reaches practically all the territory covered by our members in their wholesale trading, and, as the field is more completely covered, the increase in number of reports may not be so prominent as will be the bettered service. It requires little consideration to appreciate that new subscribers today have at their command a much larger fund of information than did the pioneers who, in the beginning, so unselfishly devoted their time and effort to create for the bureau the reputation for efficiency it has now gained. This fact must not be overlooked by prospective subscribers, because it means that, with approximately 27,000 reports at their command, inquiries can be responded to more promptly and with more accurate detail than even four or five years ago.

While we still have to argue with many lumber buyers on the advisability and necessity of furnishing us signed statements of assets and liabilities, the continual and persistent campaign of education in this respect is making the trade much more responsive, and is encouraging.

T. J. MOFFETT, CINCINNATI, TRUSTEE

W. A. GILCHRIST, MEMPHIS, TRUSTEE

the insurance companies claim that the proper owner "makes the rate." Well, then, if we make the rate we ought to know what it is that we make it out of, and if it is up to us to correct it we cannot correct it until we do know. As the insurance companies maintain the utmost secrecy on that subject, and shroud it in the densest mystery, we believe, that as partners we are entitled to a showdown. The companies are organized to keep us in ignorance. The organized force of the public is the state; the state has the authority, the money, the continuity of effort, and the disinterestedness, which are necessary to gather and classify and maintain a correct and efficient record, and we want the state to do it.

We do not want to make the insurance business unprofitable. We want to make it safer than it is now, less costly to the buyer, and adequately profitable and stable to the underwriters. The extortionate rates which have been exacted are not retained by the insurance companies to strengthen their power of indemnity and to make more secure our hazard of loss. They spend that money for "twisting." "Twisting" is the word. They pay an agent or broker or dependent relative a large part or all of this excess to twist the business from some other company. The interest of the buyer in this transaction is totally ignored.

Why should the insurance companies wish to maintain secrecy, while at the same time they

Wholesale buyers are beginning to appreciate more and more that there is a reciprocal value to a signed statement, and that after all a man who asks credit, buys on open account, or gives notes and sometimes renews them, is not a law unto himself, but is obliged to make a showing if he wishes to obtain credit and to continue business upon the right basis. Some of your customers fail to appreciate that demanding a statement when credit is asked is not a reflection on their character, honesty or business ability, but that it is done for the purpose of enabling business men to conduct their business intelligently, that credit is given a customer because of the confidence reposed in him, and that credit is asked unless cash accompanies the order. Someone has said, "A merchant's capital is the sum of his net available resources, plus his credit." In our correspondence we aim to convey three fundamental credit facts: that a statement of assets and liabilities should be comprehensive and correct; that large assets are not always necessary to the creation of credit; that anyone serving his own interests best should recognize the value, apart from actual assets, of a sound, unquestioned reputation as a credit risk, which includes unquestioned moral character and fair business methods.

Today's conditions and the custom of doing business at long range demands more complete information in these respects, and the Bureau of Information, as a special confidential agency

in compiling reports for its members only, is meeting with more substantial success in securing such data as will enable a wholesale lumberman to consider all sides of a risk before he arrives at a definite decision to extend credit. Apart from the financial side of a report, very strong emphasis is laid on the opinions covering business methods—manner of settlement, discounting, inspection of shipments being the most important. That this is appreciated by wholesale buyers is shown from the correspondence voluntarily sent us by buyers themselves, because frequently where disputes have arisen between a member and buyer, it was from the latter the controversy was first called to our attention, the effort being made to give us their side of the dispute in anticipation of a detrimental or adverse opinion or report from our member. Also it is not uncommon, in submitting a list of references along with their statement, to refer to certain transactions where disputes resulted, believing same would come to our notice in the usual way. This is mentioned to illustrate the force of the opinions in a bureau report and the reliability with which they are regarded in the trade by both buyer and seller.

#### LEGAL DEPARTMENT

The figures submitted in the Board of Managers' report indicate the progress made in the legal or collection department, but those figures cannot tell you of a further saving or "conservation of assets." The returns on collections are shown, but there has been in addition the working out of a principle in handling collections on a basis that would obtain results for our members, and at the same time render some assistance to the delinquent or failed party himself, in maintaining or reestablishing his credit. These results do not show in dollars and cents. That members have confidence in permitting us to use discretion as to mode of procedure is evidenced by appreciative letters accompanying claims and acknowledging receipt of remittances.

LEWIS DILL, BALTIMORE, TRUSTEE

The bureau's fund of information, past experience and knowledge of trade customs and conditions materially assists in determining the steps to be pursued in realizing on a past due account. Disputed claims are carefully negotiated and numerous adjustments made which have resulted in a clearer understanding of trade definitions or customs, and at the same time maintaining friendly relations between buyer and seller.

Occasionally where several claims have been received against a single concern, conferences, visits and careful scrutinizing of assets have been necessary to formulate plans to best conserve those assets and devise ways to tide over an embarrassment or a complicated situation.

In several bankruptcy cases very difficult questions arose, and attempted fraud has not been altogether absent. Some statements of assets and liabilities submitted to us after certain failures have merited a careful inquiry to ascertain the reason for the apparent discrepancy between such statement and that made to the bureau but a short time previously. Poor business conditions the past year or two have accounted for some shrinkage in values, but this is not always true, and while we fully believe in the theory of the bankruptcy law as it affects most failures, and especially to prevent preferences, questions arise or developments occur necessitating careful and diplomatic handling in order to secure the

best results, and we are sometimes lead to sanction and recommend a prompt cash settlement in lieu of a possible extended working out of a doubtful situation. Some effort has, however, been made to get from under by offering cash payments as an inducement for immediate adjustment, whereas diligent examination and presentation of evidence have resulted in turning up valuable assets and therefore a better settlement, and in some of the cases debtors were forced to disgorge to the extent of paying in full, in addition to facing possible criminal prosecution. It has not been the desire of the Board of Managers to make this legal department a source of large revenue, therefore the collection charges are placed on the recognized very moderate charge basis, which is practically the net cost of operation. The service is open to all members and becoming more widely used every year.

Through the printed pamphlet, "Lumber Legal Opinions," we have endeavored to cover legal points raised in the conduct of business, the handling of claims and from requests for opinions presented daily. Twelve issues have been printed to date, and as the number increases or is partially supplemented by some reprints, the necessity for more frequent editions has decreased. The whole number makes a very valuable compendium of handy references, and as the cases accumulate they will be given you, those already published covering nearly all the questions of daily occurrence. They are worth preserving. Some day we may have this in book form for you. As stated in the pamphlets, we cannot always guarantee the soundness of the legal opinions, but every effort is made to secure reliable and pertinent information. Legal decisions and opinions of general interest will be given upon request wherever possible. Some of the points most frequently raised affect using lumber without consent of shipper, accepting checks marked "in full settlement," etc., liability for damaged in transit or lost shipments, continuing shipments to a party who has not made previous settlements according to contract, time allowed for reporting rejection of lumber, necessity of filing corporate certificates, etc., etc.

During the past year much emphasis has been laid on the importance of foreign corporations filing certificates in states where they transact business other than those under whose laws they are incorporated, and as to the advisability of complying with the various statutes. The term "doing business," used in most state corporation laws, is rather indefinite as to construction, and the necessity of filing certificates depends upon the local interpretation of that term. The statutes in some states are more rigid than in others, and as a general proposition most corporations believe, as a matter of economy, it is usually wiser to file certificates in those states and thus provide for any possible adverse construction of the law. If suit is instituted by a foreign corporation, and a defense is attempted because of noncompliance with the statutes, the burden of defense, even though the corporation is not "doing business" under a technical interpretation of the law, is put altogether on the foreign corporation, in which event, even if not unsuited, the cost is likely to exceed cost of filing the certificate. We have accumulated some information along these lines which is at your disposal.

Our office forms, Lists A and B, pink sheets, tracers, etc., copying processes have been improved upon wherever possible under the supervision of the Board of Managers of the Bureau of Information. Occasionally a subscriber offers a suggestion or criticism which can be used for bettering the service, and we are always grateful for such interest and cooperation. Several suggested changes have been attempted in our method of obtaining information, with a view of saving postage, our time and yours, but there seems to be nothing more practical or safer than the old plain way of asking direct questions of those interested, and when we make an inquiry of you we have reason to believe you are interested, although we often find it difficult to find members who can give the information. Slight changes in forms, etc., have been made in the economy of time and money, but not at the expense of the service.

Specializing in lumber credit reporting enables us to give each report a supervision which would be impractical in any general agency; therefore, if you will give us the information you have, together with your best opinion, we will furnish such reports as ought to enable you to determine your credits and sales with safety.

The report of Chairman A. L. Stone has given you figures and details, and he and his committee have been untiring in their efforts to improve the system and service wherever possible. Under such guidance this specializing, confidential bureau is found to operate successfully. Subscribers have learned to transmit their views and opinions in a more concise form, and the credit for the degree of reliability and efficiency gained by the bureau is due to the sincere confidence and mutual cooperation reposed in it by the subscribers themselves. The bureau will always be what you make it.

W. W. SCHUPNER, Department Manager.

Secretary Perry read the report of the Special Membership Committee in the absence of the chairman, G. E. Smith. The report follows:

#### Report of Special Membership Committee

As chairman of the Special Membership Committee it is my pleasure to submit a report of the work of that committee during the past year.

We have elected during the year fifty new members, showing a net gain of eighteen, or a total number at the end of the year, 392. So that each member of this association might be personally informed, I mailed you a comparative statement of membership for the past five years, and those who have looked this statement over will see that during each of the five years, with the exception of the year ending 1906 and the present year, the association admitted during the second six months of the association year almost three times as many as during the first six months, the only exception being the year ending March 1, 1906. In that year during the first six months fifty new members were admitted, and in the second six months twenty-two. In the present year we admitted twenty-nine in the first six months and but twenty-one in the second six months.

The question of membership in all organizations is an important one, for the reason that organizations of all kinds depend upon their membership for their revenue, which also applies in the case of the National Wholesale Lumber Dealers' Association, but in the case of our organization it would seem there was a more important factor than that of mere revenue, namely, the benefits in the first place that every member of the association derives through his membership, and it would seem as though if this association were benefiting 392 individual firms that every other concern joining it could not but receive like benefits. With 392 members we ought to be able to interest as many more who are at

C. H. PRESCOTT, JR., CLEVELAND, TRUSTEE

present not in this organization, and if each member would during the coming year interest himself to the extent of securing the application of one concern we would double our membership, and I firmly believe that this could be done by a concerted action on the part of all. It would seem also that through a material increase in membership of this kind our present members would be benefited, owing to the fact that naturally new members, many of them at least, would be subscribers to the Bureau of Information, and through that channel the bureau would be able to increase its efficiency, gather more information, and our present members who are subscribers would be thus benefited. Therefore, each of us in securing his one new man, while benefiting the association in part, would be working for his own interests, and I believe that if the members would feel that in getting new members they were working for their own interests, they would certainly work harder than they have in the past.

Much time during the past year has been devoted to the membership question, and we only regret that the results have not been more satisfactory. When talking with various members and urging that they at least secure one or two new members, we have frequently been told that the field in which they operated, or the city in which they lived, was so well covered that they

did not see how they could interest anyone further. My own experience has taught me that the place in which a man lives has little or no bearing on the members he is able to secure, and to illustrate that point, personally I have secured during the past two years about eighteen members, and of the eighteen just three from the city of the country. Some applications I have secured in my own office, and some while at the mills; it therefore seems to me that the question of territory is not as important as it might appear. This association can, of course, through its Special Membership Committee, do a certain amount of good work, but if the membership is to be increased materially it cannot be done through a committee alone, but must have the hearty support and cooperation of every member, and each of us must work hard to interest good, eligible, first-class concerns whom we should have with us.

Respectfully submitted,

GOVERNEUR E. SMITH, Chairman.

### Three Committees Appointed

President Craig then announced the following committees:

Resolution: Lewis Dill of Baltimore, chairman; C. H. Carleton, Cleveland, and Henry Cape, New York.

Nomination of Trustees: C. H. Prescott, Jr., Cleveland, chairman; J. R. Williams, Philadelphia; T. J. Moffett, Cincinnati; John M. Woods, Boston; C. H. Barnaby, Greencastle, Ind.; L. L. Barth, Chicago; C. L. Shepard, New York; Alexander, Willson, Pittsburgh, and W. W. Dumphrey, Johnstown, Pa.

To confer with retail and other associations: N. H. Wolcott, Providence, chairman; F. E. Stone, Newark, N. J.; Dwight J. Turner, Toronto; M. S. Tremaine, Buffalo.

Following the suggestions of George H.

handled almost entirely by your board. While the resources each year have been sufficient to provide for the liabilities, it would seem that with an organization of such magnitude as ours that not only should the current year's expenditures be provided for, but, in addition, a reasonable surplus accumulated for contingencies.

We would also call your attention to the fact that the audit of the books does not refer to the assets of the association, in the shape of reports and records, which we understand are protected by insurance to the extent of \$20,000, and which probably could not be duplicated for double the amount if destroyed.

Respectfully submitted,

HENRY CAPE, Chairman.

The chair next called for the report of the Committee on Trade Ethics, which was as follows:

### Report of Committee on Terms of Sale and Code of Ethics

Your Committee on Terms of Sale and Code of Ethics take pleasure in making the following report:

We recommend that the code of ethics, as revised and adopted at Chicago, on June 8, 1909, by the American Lumber Trades' Congress, be adopted by members of this association.

It is not without considerable thought and correspondence on this matter that we make this broad and unwavering statement, but with the courage of our convictions and belief that by adopting this code of ethics the lumbermen of the East will, as the lumbermen of the central West and West (and we will say that the associations of the central West and West have already far outstepped the East in the advancing of their trade relations) not only raise the standard of our business principles to that high moral standing that they should attain, but broaden the business methods and moral ideas of our associates.

Taking up more fully the various points in the code:

Article I, paragraphs a, b, c and d, 2, 3, 4 and 5, meet with your committee's approval and have been cause for very little comment.

On January 13, the secretary of this association sent out a circular and among other questions he asked were:

"Shall lumber be paid for before it is delivered?"

This question, we think, we have answered.

Another question asked was, "What position do you take on orders canceled after once accepted, and some expense incurred in preparing to ship?"

The first part of this question has to do with articles 8, 9 and 10, and the latter part in reference to expense with article 11.

Article 6, as it now stands, reads as follows:

"The terms of sale as noted on original order or acceptance of same should be considered as much a part of the contract as the price at which the stock is sold. Should any shipment upon which cash has been advanced or discount has been taken, on arrival at destination, not be acceptable, for legitimate reasons to buyers, or satisfactory adjustment cannot be made as to the acceptance of the stock, buyer should have the right to demand return of such money as he has paid, before allowing the shipment to be moved or disposed of elsewhere."

You will note that this article does not state or lay down what the terms shall be, but state that they shall be as noted on original order or acceptance of same, and we wish to lay stress on those words. If we were as particular in our transactions in having this point made clear when the orders are taken as we are in reference to the price, there would be little trouble in regard to settlements. In connection with this question of taking off a discount before the material arrives, there seems to be a varied opinion, many expressing the view that material should arrive before cash settlement taking off discount is made. You can see, however, how unfair this would be to the shipper in a shipment to an eastern point from the state of Washington. We therefore consider that owing to geographical positions and delays in transit, the practice of paying cash less a discount after arrival of car should not be encouraged. Speaking from a personal experience of some if not all the members of this committee, it has been their custom to take advantage of 1½ per cent discount in all their business transactions, by paying an amount on account within fifteen to twenty days from date of invoice, after deducting an estimated amount for freight and discrepancies that may occur, and they have yet to experience the time where they lost by this custom, and furthermore, they have found that the benefits derived by this custom are manifold, winning not only the confidence of the shipper but enabling purchases to be made to a much better advantage. It is a matter of choice with the buyer if he wishes to take advantage of a discount, and should he choose so to do, the shipper should receive the benefit of having the cash. The shipper figures on getting so much for his lumber on the cars and guarantees that the freight to a given point

will not be over a certain amount, and if you wish him to take less for his stock by taking off a discount, you should pay for the same when it is loaded, allowing a reasonable time, say, fifteen to twenty days, for the invoice to reach the buyer's office.

Article 8 reads, "When a definite time for shipment is specified." You can see that when a buyer specified a definite time by which he wishes his order to be shipped, he has given the seller to understand this point, and if the seller sells on these conditions, he should be bound by his agreement, for he is supposed to have realized these conditions when he booked the order.

Article 9, as it now reads, was so adopted by the congress on June 8 after a lengthy discussion, and we think that, as it now reads, it is a just and fair agreement, but you can see that the circumstances of the case will greatly govern the question at hand, for, after all, gentlemen, it depends whether the parties engaged are of a high moral standing or what we sometimes term as "a little too smart," and it is the idea of the American Lumber Trades' Congress to educate this latter class to the higher morals of trade relation for which purpose they have gotten up and spent so much time and untiring energy upon this code of ethics.

In regard to article 11, or the expense incurred by the seller on a special order: Some of you, if not all, are actually engaged in manufacturing, and spend a part at least of your time at the mill end, and I think all of us will agree that the seller should be protected in this regard. The buyer must understand that the material is gotten out for a specific purpose and should he not take it, it would necessitate the seller to sell the material at a sacrifice in order to get rid of it. Therefore, gentlemen, in considering this article No. 11, please put yourself in the position of the mill man and agree with your committee that we are right in our approval of article 11.

W. W. KNIGHT, INDIANAPOLIS, TRUSTEE

Holt pertaining to the consideration of plans of the Chicago Association of Commerce for recruiting membership, the meeting adjourned until the afternoon session.

### WEDNESDAY AFTERNOON SESSION

President Craig again brought the meeting to order at 3:09 p. m., when the report of the treasurer, deferred from the morning's meeting, together with that of the auditing committee, was called for. A most satisfactory financial condition was evidenced in the former paper, which the auditing committee vouched for. The latter report is as follows:

### Report of Audit and Finance Committee

Herewith you will please find certificate of the Sydney P. Waud Company, certifying to the accuracy of your company's books.

Experience has proven that the check voucher now in use is too large, so a small form has been adopted, which we believe will be more suitable to our banking purposes.

In submitting our report from year to year, you are aware that although an Audit and Finance Committee, we are not active with the financial problems of the association, they being

WM. E. LITCHFIELD, BOSTON, TRUSTEE

Articles 12 and 13 meet with our approval and have brought out little or no comment.

Article 14, which you will note calls for arbitration when possible, or the settlement of disputes by referees when reinspection is not provided for by association inspection bureaus, meets highly with our approval, as does article 15, which deals with the matter of cost of inspection, and which was not adopted by the congress without considerable discussion and thought, and through compromise and consultation was finally amended to stand as it now reads, of which your committee approve.

Your committee realize that this code of ethics cannot be appreciated and adopted by all at once, but that the use of the same can only be by gradual increase, and that the seller must in many cases be governed by his customer. We feel that in getting you to coincide with the actions of the meeting held in Chicago, June 8, 1909, as much as possible, will be as much as we can ask. We know that in business some people have one way of doing business and others have another, and it is often necessary to conform in a measure to what our customers want, not what we would like. We realize that there are many who thoroughly coincide with this code of ethics, yet cannot bind themselves to be controlled by them entirely.

The continual dunning for settlement of accounts strictly in accordance with the terms of sale often proves distasteful and in some cases

detrimental to your trade. Yet, on the other hand, we are daily finding out that a great many people are becoming educated to the advantages derived by these rules, and gradually these difficulties are growing less, and the action of the association has had much to do with this falling in line, as it were. We fully realize that while it is necessary to try to get things as near on an equitable basis as possible, yet it is impossible to altogether disregard the customs that have prevailed. These things are coming gradually, however, and the Committee on Trade and Ethics in closing their report cannot enlarge too greatly on the benefits that may be derived by the adoption of this uniform basis of business ethics, and sincerely trust that the good work accomplished in Chicago June 8, 1909, will be carried on by the cooperation of the lumber industries at large, in order that a high moral standard may be attained and we may be rid of irresponsible and unscrupulous manufacturers, wholesalers and dealers, and we recommend that the National Wholesale Lumber Dealers' Association adopt the code of ethics as revised and adopted at Chicago, June 8, 1909, and your committee be discharged.

Respectfully submitted,

J. RANDALL WILLIAMS, Chairman.

Chairman C. H. Barnaby of the Committee on Arbitration expressed the sentiment of that committee as follows:

#### Report of Arbitration Committee

Your Committee on Arbitration beg to submit the following report:

Six cases were submitted to the committee during the year, all of which were disposed of promptly and we hope satisfactorily to those concerned. Each case was given the closest attention and thoroughly understood before rendering our decision.

G. C. EDWARDS, OTTAWA, TRUSTEE

We learn from the secretary that a number of cases were settled through his office, thereby saving the time and expense of putting them before the Arbitration Committee.

At our meeting last October in New York we recommended the following rules for submitting evidence to the Arbitration Committee:

"Both parties must first sign arbitration agreements as per printed forms furnished by the association."

"The party demanding the arbitration must first submit his full evidence of claim through the association to the other party to the agreement. This second party is then to submit his full evidence of counterclaim, which is to be submitted to the party demanding the arbitration."

"Each party to the agreement may then submit to the Arbitration Committee his argument of the case, but without any new evidence, which argument may not be seen by the other party to the agreement."

The rules were adopted by the Board of Directors at a recent meeting.

The secretary has experienced considerable trouble and delay in receiving papers and arguments of arbitrators, after the arbitration agreements have been signed. In order to overcome this delay we recommend the following rule for adoption:

"Final arguments and replies shall be placed in the hands of the secretary within thirty days

after the arbitration agreements have been signed."

Respectfully submitted,

C. H. BARNABY, Chairman.

The Trade Relations question was next taken up by N. H. Walcott, chairman of that committee:

#### Report of Committee on Trade Relations

The question of equitable trade relations will no doubt always be a hard one to solve. Your committee finds complaints from both the wholesaler and the retailer, evidently all more or less just.

The fair-minded wholesaler who does not interfere with the trade of the retailer makes complaint that some retailers are employing traveling salesmen who are selling the wholesaler's consuming trade at less than a living profit, and seeking their source of supply in competition with the wholesaler, oftentimes giving the manufacturer the preference, and at the same time asking the wholesaler to protect them, holding the wholesaler to very narrow trade lines.

Then we have the wholesaler who will solicit trade from the retailer, at the same time lose no opportunity to sell the retail dealer's legitimate customer. For wholesalers of this description, when discovered, the retail dealers have the remedy in their own hands, but what method can the wholesaler pursue with the retail dealer who seems to figure that anything they get in a wholesale way is all profit.

Then again, the retail dealer who is trying to do a wholesale business has no regard for his brother dealer in another town or city, and by poaching on each other's territory stir up strife among themselves.

The greatest complaint today before your committee is not the relations of the wholesaler to the retailer, as the retailer can and does to a large extent keep the wholesaler in line. But there are three propositions that require the attention of the committee:

First, how to proceed with the retailer who asks protection from the wholesaler, then competes with the wholesaler in both buying and selling.

Second, how to proceed with the wholesaler who solicits the legitimate trade of the retailer.

Third, what can be done with the retailer who is poaching trade in territory of his brother retailer.

The first question is a hard one to solve, and coming to some understanding on this question requires considerable assistance from the retail association.

The second question, as to how to proceed with the wholesaler who solicits the trade of the retailer, we believe at all times that our association endeavors to keep its membership in line as to who and who is not the proper customer for the wholesaler. With the assistance of the retail associations that report the wholesaler who interferes with their trade to the various associations, this is not so hard a problem.

On the third question, some of our members might ask why the wholesale association should be interested in the fight among the retailers, but some of the retailers have put up to the wholesaler the proposition of refusing to ship excepting into the territory where the buyer is located. We, of course, recognize that this is impractical. Some of the retailers have arrangements at various junction points for diverting their shipments in transit, and we believe that it is to the advantage of this association to do all that we can to assist the retailer in rectifying the "poaching" evil.

In conclusion, we believe that most of the wholesalers are loyal to the retail trade, and most of the retailers appreciate the wholesaler who protects their interests. We believe, also, that the relations between the buyer and seller in the lumber business today is as cordial as at any time in its past history.

In the lesser problems in connection with our trade relations, the tendency of the trade seems to be to promote a code of trade ethics which works towards harmony.

Respectfully submitted,

NELSON H. WALCOTT, Chairman.

J. V. Stimson of Huntingburg, Ind., then read the report of the Committee on Forestry:

#### Report of Forestry Committee

It is considered necessary today that whenever lumbermen meet in convention something should be said on forestry, thus making a necessary part of every body of lumbermen so assembled a committee on forestry; so I am in this capacity not because I have something new to tell you, but because I happen to be the chairman of that committee.

Some time since, a physician in southern Illinois on driving through a village saw a native entertaining a crowd with a trick dog, and after watching them for a while he said: "Say, friend, how do you teach your dog all those things? I can't teach mine anything." "Well," said the native, "You see, in the first place, you must know more than the dog."

My position in this case is perhaps somewhat like that of this country doctor. This topic is done over and over many times each year in lumber and conservation conventions, and a government bureau of forestry working overtime on the job, and you are constantly getting reports and statistics more or less correct, giving a fund of general information. We shall consider the subject briefly and from three points: conservative lumbering, forest reservation and forest re-production. The first two merge so closely that they might almost be considered together. Within the memory of some of you gentlemen, the forests encumbered much of the land and had but little value as a market product over a great portion of the Ohio and Mississippi valleys; the sturdy oak was principally used for fence rails and clapboards and much of the timber was cut, piled and burned to get the land to wheat and corn, and to get the same to the earth to rid it of the much-dreaded malaria, and timber was so destroyed over areas that if put together would constitute great states; but as markets opened up, lumbering became an industry and is today one of the great industries of this country, which has grown in a few centuries to a country of a hundred millions of people within the borders of the United States, the greatest and richest nation on earth.

At first the pioneer only used such trees or parts of trees as split or worked to suit him, and as time and conditions have made it profitable more and more has been utilized, until today the entire product of the tree has a value. It is said that in 1870 only about half of the felled white pine tree was taken by the mill man, but at this time they cut everything from the tree that will square a four by four timber, because it is now profitable to do so, and I take it that the lumbermen everywhere are taking from the lands cut over all the wood that will show a profit to the business.

Notwithstanding all reports to the contrary,

R. H. DOWNMAN, NEW ORLEANS, TRUSTEE

short and odd lengths in lumber now have their proper place in the market, reducing the waste to a low point, but there are not many things that can be done in the interest of conservative lumbering by which much more can be saved, first by using better milling equipment, thin saws and cutting from the edging, slabs, etc., all dimension stock possible and creating a market for the same, as has been done with much of the other product that was wasted at one time, and by having mills properly adjusted and manned, reducing the miscuts to a minimum, and by not overcrowding the machinery in a great effort to cut all your timber at once; much valuable wood is wasted annually by poor and incompetent manufacturing; this is not only waste but a crime.

The matter of forest reservation is not a new subject. The government began in this direction during Washington's administration, buying the Live Oak Islands off the coast of Georgia to secure a supply of ship timbers; then Grover and Blackbeard Islands in 1817, comprising 1,900 acres, and subsequent purchases, bringing the total up to about 208,000 acres; then nothing further was done for a long time, as the civil war changed the type of war vessels, when these live oak forests were no longer required for ship building. During the last twenty-eight years the government has been quite active and today owns over one hundred million acres, or one-fifth of the so-called forest land in the United

States, and various states own about 10 per cent more. In this matter it seems to me the government is rightly engaged, because it can more properly protect this land from depredations, fire and thieves than the individual. It is free from taxes and pays lower interest rates than is possible with private holdings. Information that recently came to me shows that the government is placing much of this timber on the market, having sold quite a large portion of its timber in Oregon and Washington. This, it seems to me, should not be done, but rather only such timber should be sold by the government at this time as has been damaged by fire or is otherwise damaged or dying and only such other timber as necessary to sell with it to make the purchase of such timber desirable or profitable. When this timber goes into the market it tends to cheapen timber on the market and cheap lumber does not aid conservation, but rather to the leaving in the woods to rot what under other conditions might be taken out at a profit and thus utilized. It goes without argument that the American lumberman is first a business man, and will at all times take from the woods whatever will show a profit in the business.

In many localities isolated from markets not all the trees are valuable at this time for lumbering and over such lands great care should be used to not damage such timber as will be left, by felling the trees and through logging operations, since over much of such territory it will become profitable to recut in a few years, as has been proven by experience in Michigan and Wisconsin, and in fact many other states of the Union.

The system of taxing timber holdings in many states is today forcing much timber onto the market. It is due to this largely that I am able to procure log supply for my Indiana mill at this time. The taxes and interest on the investment being considered so much greater than the growth of the timber, that the land is being rapidly cleared and put to cultivation. Fire is the arch enemy of the forests, waste from fire, floods,

promised in a few more years, merchantable timber and all the young trees were killed. This is not encouraging to private reforestation under present conditions, and is a further argument in support of adequate fire protection by the state. It is not considered that this fire was set for the purpose of destroying, but was doubtless resulted from leaf firing. During the last four years there were two million acres of forest lands burned over; it is true that a great deal of this was cut over lands, but lands containing a great deal of timber that would have been available and valuable in a few years.

We believe that great effort should be made toward codifying, revising and amending the laws relating to private reforestation, to encourage the growing of trees by the people, taking away a portion of the jeopardy by making the tax on such property only the tax on the naked land, by making it a more serious offense to set fires and making earnest effort to detect and punish those persons responsible for the same, as in the case of yeggmen or violators of the revenue laws; the annual loss resulting from forest fires will certainly justify extreme measures to this end. Someone said the reason reformers accomplished so little is because they want so many kinds of reform, but I think that we, as lumbermen, are agreed upon the nature of reforms necessary in the laws relating to forestry in this country.

Colleges have been giving thorough instruction in mining, agriculture, etc., for many years, and many of the great universities have established chairs on forestry where more or less theoretical forestry is being taught; but there is no school where clearheaded, practical forestry can be taught as it can by the sound, business man. Yet these schools are doing a great work, and it is our duty as an association and as citizens to cooperate and aid in every way in the thorough dissemination of this knowledge.

It is with much regret that I note here the failure of the Appalachian White Mountain Forest Reservation Bill to pass at the last session of the national congress. The people's money can be used for no better purposes than in the conservation of the nation's natural resources, the protection of our great watersheds, sources of navigable rivers, water power, etc., and would urge that this association use every effort to support the government in a continuation of its policy of the last two decades in the great business of forest conservation and reforestation that posterity may not be forgotten.

In concluding this report I must emphasize the necessity of proper fire protection, and that by the proper practice of forestry our forests may be made to yield ample timber for our needs and a general awakening of the states to these ends.

Ex-President Roosevelt so forcibly emphasized these points in his special message to congress in transmitting the report of the National Conservation Congress, that I quote it here as follows:

"Forests in private ownership cannot be conserved unless they are protected from fire. We need good fire laws, well enforced. Fire control is impossible without an adequate force of men whose sole duty is fire patrol during the dangerous season."

"The conservative use of the forest and of timber by American citizens will not be general until they learn how to practice forestry. Through a vigorous national campaign in education, forestry has taken root in the great body of American citizenship. The basis already exists upon which to build a structure of forest conservation which will endure. This needs the definite commitment of state governments and the federal government to their inherent duty of teaching the people how to care for their forests. The final responsibility both for investigative work in forestry and for making its results known rests upon the states and the nation."

"By reasonable thrift, we can produce a constant timber supply beyond our present need and with it conserve the usefulness of our streams for irrigation, water supply, navigation and power."

"Under right management, our forests will yield over four times as much as now. We can reduce waste in the woods and in the mill at least one-third, with present as well as future profit. We can perpetuate the naval stores industry. Preservative treatment will reduce by one-fifth the quantity of timber used in the water or in the ground. We can practically stop forest fires at a cost yearly one-fifth the value of the merchantable timber burned."

"We shall suffer for timber to meet our needs until our forests have had time to grow again, but if we act vigorously and at once, we shall escape permanent timber scarcity." Respectfully submitted,  
J. V. STIMSON, Chairman.

Mr. Perry read the report of the Marine Insurance Committee in the absence of Chairman Harvey Granger and the motion was passed that his suggestion be referred to the

incoming trustees. The report of this committee follows:

#### Report of Marine Insurance Committee

This committee has never had the opportunity or found the necessity of meeting together and the only matter that I know of that has come up to me as chairman is the one of marine insurance as a general proposition on coastwise business.

In a statement prepared by us from the records of a very limited number of the members of our organization covering a period of five years, from 1904 to 1908 inclusive, I find that the aggregate of values was \$9,524,000, and that the aggregate of premiums was \$146,000, which makes an average cost of 1½ per cent. The amount of losses collected was only \$57,591, which amounted to six-tenths of 1 per cent, showing that the losses collected amounted to just about one-third of the premiums, which demonstrated clearly to my mind that if a considerable number of the members of our organization who are large insurers would get together and form a marine insurance company or some cooperative alliance for the purpose of giving all of its members the benefits of the profits now made by the various marine insurance companies that we would be taking a great step forward in economy in marine insurance.

It is clearly evident, from the statement submitted by the various members who made up this report, that if the National Wholesale Lumber Dealers' Association was operating in conjunction with this organization a marine department that there could have been saved to the members thousands and thousands of dollars, because out of a report of about fifty members the insurance company's earnings were \$89,000 above their losses. Now, what would it have been if we had a complete statement of the entire membership of our association? Why, it would be up into the hundreds of thousands.

An organization of this character could be

W. W. SCHUPNER, NEW YORK, SUPERINTENDENT BUREAU OF INFORMATION

G. E. SMITH, NEW YORK, CHAIRMAN SPECIAL MEMBERSHIP COMMITTEE

etc., according to the government reports, exceeds the annual consumption of lumber in this country. The nation is becoming awakened to the magnitude of this loss and there seems to be on every hand determined efforts to prevent it. Much is being done to this end by thorough patrol by men whose sole duty is to protect the forests from fire. Many fires result from carelessness from hunters and campers and often much damage is done to standing hardwoods from so-called leaf fires, scarring the exposed roots or bowl, thus allowing the worms to get into the tree, much of this damage should be eliminated entirely, but the state must get busy, since only the proper relief can come from that source.

Reforestation can be encouraged provided there is encouragement from one source only and that is protection against fire. This is a long-time crop and there is not much incentive for the private individual to engage in the business.

Early in last April forest fires supposedly of incendiary origin devastated ten thousand of the choicest reforested acres of the Biltmore estate in North Carolina. Ten to fifteen years ago worn out land was set to poplars which

formed, to be handled by the national body, providing a fair percentage of the members, especially the members doing a coastwise and export business, would join. These members, of course, would get the benefit in the end of cheap insurance, while the organization would be prepared to furnish insurance for those members of the national body who were not a party to the insurance department, at rates as cheap, if not a little cheaper than those being furnished by the marine companies today.

If it should be found that it is not feasible to form a marine company for the handling of this business, then I would suggest that a large percentage of the members carry their own insurance during certain months of the year. By experience we have found that in our own business a large amount of money can be saved by carrying our own insurance during certain times of the year, especially if the class of vessels is watched very closely.

For the association to accomplish better results through its marine insurance committee, I am of the opinion that the proper thing to do in connection with this marine insurance is to entirely separate the great lakes section from the coastwise section and appoint a special committee of three to handle this matter. The appointments should be such that the three

... say action together and formulate such plans as would probably meet the requirements and approval of the national body. The chairman at least should, in my opinion, be a man from New York, and with two others may be from nearby localities, so that they could get together frequently on this subject. I feel very sure that a cooperative plan of some kind can be worked out whereby the members of our association can save a large percentage of these premiums. On the Great Lakes the pooling plan has met with very satisfactory success. Their proposition, however, is not the same as ours; they open say May 1 and close December 1, while ours is an all-year-round proposition and therefore no closed season.

A large number of our members seem to be interested in this matter of marine insurance and I am sure a working committee can be secured on the above basis and these two suggestions are submitted by the committee for the consideration of the national body at this time. Respectfully submitted,

HARVEY GRANGER, Chairman.

#### R. W. Higbie Nominated for President

R. W. Higbie was nominated for the office of president by F. E. Parker, in an eloquent speech. The nomination was seconded by J. V. Stimson, O. O. Agler and others, and the nominations declared closed. The new president was escorted to the chair and gracefully acknowledged his new honor, following which the session adjourned until the next morning.

#### The Banquet

The banquet tendered by the National Wholesale Lumber Dealers' Association began at eight o'clock in the large banquet hall. An

HUGH MCLEAN, BUFFALO, CHAIRMAN  
COMMITTEE ON FIRE INSURANCE

excellent menu and a very tasteful program of entertainment was furnished by the committee in charge. Following the dinner several toasts were proposed, and responded to by various members of the association, the affair ending about midnight.

#### Reception to the Ladies

Friends and relatives of the visiting delegates were tendered a formal reception on Wednesday evening, in the Grand Gallery of the hotel. About seventy enjoyed the sumptuous dinner which was served.

Following the dinner the ladies adjourned to the gallery overlooking the men's banquet hall, and there enjoyed the speeches delivered later in the evening.

#### THURSDAY MORNING SESSION

The early session was marked by a rather small attendance and was brought to order at 11:40. The first business was the report of Chairman J. L. Kendall of the Committee on

Railroads and Transportation, which was read by Secretary Perry:

#### Report of Committee on Railroads and Transportation

Mr. President: The scope of work of your committee has been greatly simplified owing to the fact that the traffic manager is working directly under the secretary of your association. Your committee believes this was a wise move to make. Results could be obtained with much greater facility than by the old system in which the work was more largely done by the members of the committee. The secretary of your association, with the concurrence of your committee, employed a traffic manager a little over a year ago who has fulfilled every expectation. He has handled the work of the bureau in a businesslike manner. All claims and controversies referred to him have been promptly handled and we believe the results obtained to be as good as have been obtained through any traffic bureau. Unfortunately the bureau is not self-sustaining, and ought not to be expected to be, speaking strictly from a financial standpoint, but we believe that it is one of the very valuable bureaus of the association and a very great help to the lumber-shipping interests of the United States. Many precedents have been established through persistent negotiations that have been of great benefit to the lumber trade, so that the cost of the bureau cannot be calculated by merely dollars and cents visible.

The past year has been one of settled conditions, very few changes have been made in freight rates. There have been persistent rumors during the past years of an intended advance in freight rates but so far as your committee could ascertain there has been at no time a concerted effort made to advance freight rates. On the other hand with the advance in labor and the advanced cost in material, it is not likely that any reduction of rates could be obtained.

In the past year there has been an effort made by the Interstate Commerce Commission, the various state railroad commissions and the various trunk line associations to promulgate and enforce uniform demurrage rules. Your traffic manager attended the hearing before the Interstate Commerce Commission at Washington and will state fully in his report the progress made in promulgating and putting into effect uniform demurrage rules.

Owing to the complete report which the traffic manager submits to the association, your committee do not feel warranted in making any further extended report.

Respectfully submitted,

J. L. KENDALL, Chairman.

The report of the Transportation Bureau was submitted by W. S. Phippen, traffic manager, as follows:

#### Report of Transportation Bureau

I herewith submit the report of the Transportation Bureau for the past twelve months and will first dwell upon the claim collection department of the bureau, calling your attention to the fact that during the past year more members have taken advantage of the services of the bureau, more money has been collected and fewer claims declined by the railroads than during any previous year in the history of the Transportation Bureau. During the past two years our claim collections have increased fifteen per cent, while during the same time there has been a decrease of twenty per cent in the gross expense.

Our claim report for the past year is as follows:

351 claims on hand March 1, 1909,	
amounting to.....	\$12,566.47
547 claims received during the year,	
amounting to.....	9,672.24
898 total handled.....	\$22,238.71

#### DISPOSITION.

363 claims collected.....	\$8,059.88
1 claim transferred	
to attorneys.....	917.28
99 claims returned to	
members with ad-	
vice that they	
were untenable	
and on which no	
demand was	
made on railroad	1,619.53
518 55 claims withdrawn,	1,066.08
compromised, re-	
duced to correct	
basis, etc.....	585.49
	\$12,248.26

380 claims remaining unset-	
tled March 1....	\$ 9,990.45
Gross expenses to March 1, 1910....	3,021.24
Fees derived from collections.....	1,330.24

Net expenses for the year.....\$ 1,691.00  
Of the 380 claims on hand, 40 claims, aggregating

\$1,200, have been passed for payment and it only remains for the carriers to remit.

It may be of interest to note the class of claims collected: 172 were for overcharges in rate and misrouting; 90 for overcharges in weight; 10 for demurrage; 28 for loss and damage, and 63 claims for car stake allowance on about 1,100 cars. From letters received from our members during the past year the decrease in the number of errors made by the carriers and the increased care taken in transporting shipments is very noticeable. However, this department is capable of handling a very much larger number of claims and we earnestly invite all members to take advantage of this feature of the bureau.

#### CAR STAKE ALLOWANCES

While the Car Stake Committee has been actively engaged in supporting the "Graham bill," this bureau has devoted a large amount of time to compelling the proper observance, on the part of the carriers, of the 500 pounds car stake allowance. In addition to the 1,100 shipments on which refunds have been made during the past year, we have, at the present time, about 1,500 shipments under investigation. While the majority of lumber tariffs provide for this allowance, our investigations prove that on about fifty per cent of the shipments it is not being made. This, I believe, is due more to negligence on the part of their employees than to any intent on the part of the carriers to avoid the observance of the rule, although several of the smaller roads or branch lines, when brought to task for not showing this allowance, claim to have been deducting the 500 pounds from the gross weight instead of from the net weight. Of course, it is practically impossible to prove or disprove their statements as to deduction from the gross weight, but we believe we have corrected this practice and that the roads referred to are now making the allowance in accordance with the published tariffs.

CHAS. H. BARNABY, GREENCASTLE, CHAIRMAN  
COMMITTEE ON ARBITRATION

One of the lumber carrying roads, the Bangor & Aroostook railroad, does not provide for this allowance in its tariffs and has not been making it. This railroad was not made a defendant in the car stake complaint, for the reason, I believe, that the shippers over that road did not display sufficient interest in the matter at the time the complaint was filed. We have recently been corresponding with the officials of that road, and while we may be obliged to file an additional complaint with the Interstate Commerce Commission in order to bring this road into line, I am inclined to think that we may gain our point within the next few weeks without resort to such procedure.

#### DEMURRAGE RULES

At the suggestion of the Transportation Committee, I attended the Car Demurrage Conference held in Washington last June, a detailed report of which was submitted to the committee at that time. A copy of the report of the Committee on Car Service and Demurrage of the National Association of Railroad Commissioners; also copy of the "Proposed Uniform Demurrage Code," adopted by that body and approved by the Interstate Commerce Commission, was mailed to our members in January, thereby acquainting them with the outcome of this question.

## RATES, ETC.

The question of publishing a railroad rate sheet has been brought up from time to time, and while such a publication would considerably increase the expense of the bureau, it could, in my opinion, be satisfactorily handled, provided a sufficient number of our members would indicate their interest in the project. While, I believe, there are four or five rate books or sheets now being issued, we could, no doubt, get out such a publication as would prove of great benefit to our members.

During the past year we have checked up and quoted about 1,000 rates. We have also succeeded in securing some desirable water rates on cypress from New Orleans milling points. Our files of lumber tariffs are kept right up to date and we respectfully invite more inquiries from our members. The general correspondence of the bureau has greatly increased during the past year, and the inquiries from members cover a wide range of transportation subjects, including Interstate Commerce Commission ruling and court decisions.

In conclusion I would state that our relations with the railroads are very agreeable and we earnestly invite those members who are not taking advantage of this department to do so, thereby cooperating with us to the end that we may increase the scope of the Transportation Bureau and accomplish more and greater results in the future. Respectfully submitted,

W. H. PHIPPS, Traffic Manager.

B. Franklin Betts, chairman of the Committee on Legislation gave the following detailed report of that committee:

## Annual Report Committee on Legislation

Your committee on legislation has not been overburdened with work, though many interest-

JOHN L. ALCOCK, BALTIMORE, CHAIRMAN COMMITTEE ON HARDWOOD INSPECTION

ing matters have claimed its attention and received its best thought. The year 1909 has been a "trying-out" period, and little new legislation seems to have been inaugurated. This was to be expected after the flood of reformation attempted in 1907 and 1908, and even now, while business is improving in all branches of trade, ours among the rest, in spite of intense activity on the part of investigators and reformers, there seems a halt in the general resumption of activity pending decisions by the higher courts on questions involving certain phases of trust laws, railroad legislation, decision of the Interstate Commerce Commission, etc.

Of recent legislation the new corporation tax law has probably received the most adverse criticism from mercantile concerns. We have received no direct complaints from our members, and so have not been particularly active in measures looking for relief from its many unfair exactions, but our committee was ably represented by C. F. Wiehe of Edward Hines Lumber Co., at a convention of representatives from business, manufacturing and commercial organizations in all parts of the United States, called by the Illinois Manufacturers' Association of Chicago and held in that city, January 14 last. The judgment of that convention was that the law as framed infringes on the sovereignty of the various states, discriminates between individuals or copartnerships and those operating

as corporations, and is especially obnoxious by reason of the publicity which the law would give to corporation business, whose reports "shall be filed and shall constitute public records, and be open to inspection as such." The convention unqualifiedly endorsed the efforts being made for the absolute repeal of the law as evidenced by H. R. bill No. 14,545, prepared by Mr. Southwick, M. C., and also approved of H. R. bill No. 17,504, introduced by Mr. Coudrey to extend the time allowed for filing schedules and returns from March 1 to May 1, and to repeal that part of the law requiring or permitting publicity of such records. Both these bills are now before the Committee on Ways and Means of the House of Representatives, and the convention appointed a committee of eleven to carry out the spirit of the conference and even to test the constitutionality of the law if deemed advisable.

In September last we were asked by the Illinois manufacturers' Association to bear a proportionate share of the expenses in a proposed action in several western states—namely, South Dakota, Kansas and Oklahoma—to test the constitutionality of the unusual Foreign Corporation Statutes which exist in those states. These statutes, if valid, it was stated prevent the use of the courts in those states in the collection of claims for goods sold by corporations of other states unless the latter shall comply with very unusual demands before securing permission to do business and sue and be sued in those states. Your committee at once undertook to gather the experience of many of our members presumed to be doing business in that section by circular letters asking for detailed information, with the result that of thirteen firms addressed located in states from Illinois to California and Washington and from Michigan to Louisiana, five recommended that our association should lend its moral and financial support to the proposed action on the part of the Illinois Manufacturers' Association; two firms voted "no" on the question and the balance seemed not interested in the proposal. Our recommendation to the trustees was, that not being familiar with the oppressive laws referred to, we were reluctant to recommend our association entering into litigation which would not interest a great many members; nevertheless, believing in the sentiment that we should support every good business movement we left it to the Board of Trustees to decide what action should be taken. During this correspondence we received a suggestion from one of our members which we think worthy of repetition, viz.:

"Anticipating some such difficulty as this, our terms of sale, among other conditions include the following: 'All sales are made f. o. b. mill with freight allowed to destination,' which protects us in a measure against such adverse legislation, making the contract subject to our local laws and which would allow us to bring action in the federal courts in case of any necessary litigation."

We recommend that the Board of Trustees make further investigation along this line through our association counsel for the information of members at large, but we have not been advised what action, if any, was taken.

Our association having been invited to send delegates to attend a convention called by the National Civic Federation on the subject of Uniform Legislation, this committee was requested to be present at its sessions, which were held in Washington, D. C., January 17, 18 and 19, and your chairman can attest how deeply he was impressed by the importance of the subjects there considered. The National Civic Federation has on its Executive Council such men as President Wm. H. Taft, Senator Elihu Root, Hon. Seth Low, Archbishop Ireland representing the public, Messrs. August Belmont, W. C. Brown, Geo. B. Cortelyou representing employers, John Mitchell and others representing wage-earners, and the conference was presided over by the Hon. Alton B. Parker. This federation has undertaken the subject of Uniform Legislation covering such matters as Commercial Law, Collection of Bills for Merchandise, Labor Laws, Conservation of Natural Resources, Marriage and Divorce, Reform Simplicity and Economy in Court Procedure, Employers Liability and Workmen's Compensation and even State Supervision of Forests in Private Ownership. Other organizations, such as the American Civic Association, the Conference of State Governors, the Commissioners on Uniform State Laws, etc., are working along the same lines of thought, and it seemed to be the consensus of opinion that if uniform state laws on these subjects can be made, it will materially relieve the national government from passing many bills covering interstate matters that at present seem necessary unless the states themselves will act uniformly. Your committee addressed a letter to the chairman of the Commercial Law Committee of the federation on the subject of the pressing need of Uniform Collection Laws, stating that the matter is of so great importance to all corporations and individual business men doing interstate business, that it should claim the attention of the conference or that it should be referred to a committee for

consideration, and among the resolutions adopted by that conference was one recognizing the need for radical changes in the administration of the law, both in criminal and civil action, and a committee of fifteen on Reform in Legal Procedure was appointed with instructions to cooperate with the Committee of the American Bar Association to suggest remedies and formulate proposed laws to prevent delay and unnecessary cost in litigation, and to use the influence and the power of the National Civic Federation to simplify and expedite judicial procedure.

On the subject of Employer's Liability and Workmen's Compensation, the conference was addressed by Mr. August Belmont of New York and Mr. Geo. M. Gillette of Minneapolis, both agreeing that some reasonable uniform law should be adopted in each state to protect employers on one hand from unreasonable claims on the part of injured employees and on the other hand for such reasonable compensation to workmen and definition of their rights when injured in the performance of their regular duties as would not be unfair to the employer. It was suggested that this might be covered on a cooperative insurance plan. The subject is a very important one and merits our most careful consideration.

We feel also the matter of state supervision of forests in private ownership is particularly interesting to those of our association who are manufacturing lumber. Already the supreme court of Maine has rendered an exceedingly important judicial decision. On March 10, 1908, in response to questions as to the right of the legislature to restrict the cutting of trees on private land for the prevention of droughts and floods, the preservation of the natural water supply, etc., the Maine supreme bench set forth unequivocally the principle that the property rights of the individual are subordinate to the rights of the community, and may properly be

W. E. DELANEY, ONE OF THE HOSTS

curtailed by state restrictions. And the supreme court of the United States, in an opinion rendered April 6, 1908, adopted a similar view, viz.: "The state as quasi sovereign and representative of the interests of the public has a standing in court to protect the atmosphere, the water, and the forests within its territory, irrespective of the assent or dissent of the private owners of the land most immediately concerned."

It seems to us the lumber manufacturers of this country should realize at once that the time is coming when they may have to assert their rights and protect their interests by preventing unreasonable legislation on this subject, and it cannot be discussed without involving the very important question of taxation. The burdens placed upon timberland owners now by excessive taxation and interest charges should not be increased by any state supervision unless the state on its part is willing to cease taxing annually a crop which matures but once in three or four generations.

The National Civic Federation adopted a resolution endorsing the conservation of American forests and suggested "the effective handling for forest land in private ownership depends mainly upon uniform state laws providing for right methods of forest taxation and for the protection of forests from fire" and this subject was referred to the Commission on Uniform State Laws.

We must speak too highly of the personnel and the earnest conscientious work of the National Fire Federation and recommend most highly that the National Wholesale Lumber Dealers' Association continue its interest in the work of the federation.

Respectfully submitted,

R. FRANKLIN BLISS, Chairman.

Next in order was the reading of the findings of the Fire Insurance Committee, as follows:

#### Report of Fire Insurance Committee

Your Insurance Committee beg leave to report as follows: The lumber insuring companies and lumber mutuals have all passed a very successful year. Some of our newer members may not know that some twelve years ago the lumbermen were very much dissatisfied with the continual increase of insurance rates on lumber yards or sawmills, when after a complete investigation covering the previous twenty years it was shown that \$3 had been paid in premiums when \$1 had been paid in losses on such risks. As a result of this investigation the following lumber mutuals were formed:

Lumbermen's Mutual Insurance Company, Mansfield, O.

Pennsylvania Lumbermen's Mutual Fire Insurance Company, Philadelphia, Pa.

Lumber Mutual Fire Insurance Company, Boston, Mass.

Lumbermen's Mutual Insurance Company, Indianapolis, Ind.

And later the

Lumber Underwriters of New York.

Lumber Insurance Company of New York.

Adirondack Insurance Company of New York.

Toledo Fire & Marine Company of Ohio.

National Lumber Insurance Company of Buffalo, N. Y.

CHESTER F. KORN, ONE OF THE HOSTS

The last five companies named are all stock companies, but controlled and operated by practical lumbermen; their policy has always been to rate each risk on a fair basis without regard to old line rates; they have all been very successful.

Referring again to the lumber mutuals, the four companies, namely: Lumbermen's Mutual Insurance Company of Mansfield, O.; Pennsylvania Lumbermen's Mutual Fire Insurance Company of Philadelphia, Lumber Mutual Fire Insurance Company of Boston, and Lumbermen's Mutual Insurance Company of Indianapolis. On January 1, 1910, the above companies showed combined figures as follows:

Insurance in force	\$47,913,804.00
Premiums in 1910	1,117,323.00
Cash assets	1,729,874.00
Cash surplus	1,116,538.00
Since their organization these companies have paid to their policy holders—	
For dividends	\$1,500,183.00
For losses	1,905,276.00
Total	\$3,405,459.00

The above figures, satisfactory as they are, do not represent all the good which has been achieved for the lumber trade by combined mutual and lumber insuring companies. The competitive insurance facilities which they have afforded the lumbermen has materially brought down the rates of stock companies so that all

members of the lumber trade, whether they are policy holders or not, have benefited. The indemnity which is offered by the lumber insurance companies is of the best and we believe it is the duty of every reputable lumberman to support these companies as far as possible. The larger volume of business that these companies can secure, the more steady becomes the loss ratio. With combined economy in management and careful selection of risks these companies have a bright future.

Respectfully submitted,

HUGH McLEAN, Chairman.

Henry T. Wills, secretary of the National Tariff Commission, addressed the convention and urged its cooperation in purposes of his organization. He also outlined its plans for a non-partisan tariff commission in the interest of all commercial bodies. Trustees of the association were instructed to appoint delegates to the national commission.

The much discussed car stake question was thoroughly treated by F. R. Babcock in his report on that subject, as follows:

#### Report of Special Congressional Car Stake Committee

Your committee known as Congressional Car Stake Committee takes great pleasure and satisfaction in announcing that the original Car Stake Committee created in joint convention in Ottawa, Canada, and composed of representatives of the affiliated association throughout the United States was able by renewed and continued efforts to collect enough money by personal appeal and subscription to liquidate all obligations and close all the affairs of that committee with the ending of the year 1909. For the benefit of those who may be interested, I am filing with this report a copy of the statement showing receipts and disbursements.

Owing to the fact that there was little activity during the last two years other than the detail work of closing up the affairs and the receiving of an adverse opinion at the hands of the Interstate Commerce Commission, there has been little to arouse the sympathy of our supporters, therefore it is only natural to assume that many have already lost interest in this car stake contention and while we were unable to accomplish what we had hoped to at the hands of the commission, yet we were not altogether defeated, as you will remember, as we won that part of our contention relating to free freight to the extent of 500 pounds on car stakes and it is purely in the interest of our members that I am prompted to refer briefly to this matter. Careful investigation shows conclusively that many of our members are not deriving the benefit they should by virtue of two reasons: first and most important, I regret to note a disposition on the part of the railroads to totally ignore these obligations at least insofar as putting on the freight bill anything that will tend to show whether or not due allowance has been made; and, second, there seems to be a lack of interest on the part of many who are entitled to such an allowance, therefore your committee feels that it is its plain duty to call attention to this matter and urge upon every one of our members to scrutinize carefully all freight bills to see that the proper allowance has been made. Only recently one of our most reserved and modest members was forced to give vent to his feelings in the following:

"This flagrant and persistent violation of their agreement must be either from negligence or an intentional avoidance, and it justifies our contentions with the railroads and our appearance before the commission and Congress in efforts to secure for our branch of trade its fair and equitable share of the facilities for shipment and which are supplied other industries. Incidentally this particular showing will help refute the charge that the railroad interests so often make to the effect that shippers delight to knock and ask unreasonable legislation. We are not getting our share of the plain contract part of a division in money and are apparently losing thousands of dollars every year to the railroads and in spite of the agreement and rule."

Gentlemen, while this amounts to only 50 cents to \$1.50 a car, it is an easy problem to solve that in the aggregate it amounts to a snug little sum annually that is worthy of your attention.

It will be remembered that a year ago we reported having filed a bill in congress under the advisement and recommendation of our counsel; in fact, the bill was prepared by counsel and as such would naturally be subject to more or less individual criticism because it included many things that do not particularly interest us.

Owing to the fact that it was decided to do little other than consider tariff regulation in the sixtieth congress, there has been no opportunity to do anything in support of this bill until very recently and for the purpose of getting

this matter as clearly as possible before our members, I beg your indulgence for going somewhat into detail to explain the present status of our case.

A general invitation was issued by the Committee on Interstate and Foreign Commerce for all people interested in the passage or defeat of all bills before that committee to arrange stated hearings, therefore upon an appeal made by our secretary, Mr. Perry, we were granted a hearing on Wednesday, January 26, 1910, which proved in a manner to be rather an unfortunate date, as many of our friends were unable to attend because of several lumber conventions being in session at that time, notably the Southern Yellow Pine Association at New Orleans. Notwithstanding this, we had a very representative gathering, having several delegates from our own association from New York, Philadelphia, Baltimore and Pittsburg, as well as representatives of the National Lumber Manufacturers' Association, National Hardwood Lumber Association, Southern Cypress Manufacturers' Association, Eastern States Retail Lumber Dealers' Association and several large individual interests. As stated before, our bill was prepared by counsel and contained many things that did not seem to be of interest to the lumbermen, yet it did not appear to be expedient to go to congress with a bill drawn only in the interest of one commodity and one class of people, therefore our bill was drawn upon broad lines including with forest products many other commodities, some of which are on a parity with ours, believing that if those interested in the other commodities did not deem it necessary to defend that part of the bill pertaining to them it would in no way materially weaken that portion which we undertook to sustain in our appearance before the committee, therefore in our argument we contended for the bill as a whole, but made it clearly known that we were interested in it only insofar as lumber and forest products were concerned.

CLIFT S. WALKER, ONE OF THE HOSTS

So that those of our members who are desirous of familiarizing themselves with just what is being done, I am taking the liberty of quoting in part some of the points which seem to be in favor of the relief prayed for in our bill:

"We all recognize the absolute necessity of securely and safely fastening, binding and racking all commodities transported on flat and gondola cars in order to avert accidents and prevent loss of life and property, and we believe the only way this can be done is in uniformity and without prejudice in all parts of the United States so as to do away with the present discrimination.

"Lumber, representing as it does the second largest tonnage of any commodity known to the common carrier inasmuch as it is excelled only by coal, becomes a very important factor; especially is this true when it can be said without fear of contradiction that in addition to its being the second largest in tonnage it is one of the largest (if not the largest) revenue earners to carriers, as these are facts that have been proven to the Interstate Commerce Commission, before whom many of the points in interest have been brought out and established, all of which evidence can be produced for your consideration if desired."

It was also shown by a compilation of figures that approximately 1,748,620 cars of lumber were shipped annually on open cars, for which the necessary car stakes, binders and bracers are

now being furnished by the shipper and ordered to be arranged so as to comply with Master Car Builder rules and specifications as translated by the various superintendents of transportation. Therefore, in some sections and localities shippers are required to stake cars much more securely and at a greater expense than in others where the superintendents of transportation may be more lenient. It is in this connection that we claim unfair and unjust discrimination.

It will also be observed from the following quotation that we attempted to show the injustice of the duties imposed by the carriers upon the shippers of forest products as compared with other commodities, showing at the same time that while we reluctantly carried out their unfair, now-required impositions yet at the same time by use of these stakes we enhanced the carrying and earning power of the equipment; also that the Hepburn bill was so pronounced on this subject that the Interstate Commerce Commission in ruling adversely was compelled to take refuge behind the words, "It is deemed unnecessary to consider certain questions of law"; as well as to show by example, wise economy and conservation of resources:

"The carriers furnish for the transportation of coal specially-built coal hoppers; for coke a special coke rack car; for live stock a specially-equipped car; special car doors for grain shipments at not to exceed a maximum charge of \$2 a car; dunnage for sugar at \$1.50 a car; dunnage for oil at 80 cents a car. Gentlemen, we ask in all fairness, 'Why should the shippers of forest products not enjoy the same privileges?' We offer to the carriers a commodity second in tonnage, second to none as a revenue earner and one that moves every day year in and year out, and what do we get in return? An equipment totally inadequate to perform its duty as required by the classifications governing it. Every flat and gondola car that is given

and the gondola with 110,000 pounds at 16 cents a hundred would earn \$176, for the same service identically. This shows a net increased revenue to the carrier of \$80, all made possible by the use of this extra equipment. Do you wonder, gentlemen, that we are here to ask you to enact a law providing that these facilities of shipment, which are now furnished under the Master Car Builder rules and specifications as to shapes, size, character of material, etc., so as to provide safety to life and protection to property and which at the same time increases the carrying and earning power of the equipment, shall be furnished at the expense of the carrier?"

It was shown by a comparison of rates on coal and lumber originating in the same territory and traveling to all the important cities both east and west that lumber rates were from 50 per cent to 120 per cent more than coal.

"Assuming 7,500,000 pounds to be a fair average train tonnage, 17 cents per hundred pounds to be an average rate on foreign products, we arrive at the following comparison showing the advantages to be gained by common carriers from transporting lumber on open cars:

"A train of gondolas would be made up of 70 cars of 107,000 pounds gross weight each, yielding 5,250,000 pounds of revenue tonnage, which, at 17 cents per hundred pounds, would produce \$8,925 train revenue. A train of box cars would be made up of 83 cars of 90,000 pounds gross weight each, yielding 4,150,000 pounds of revenue tonnage, which at the same rate of freight would produce \$7,055 train revenue. With the same cost for motive power and maintenance there would therefore be an advantage to the transportation company in train revenue alone by the use of flat and gondola cars of \$1,870 for each trainload of forest products transported, representing an increase of more than 25 per cent in earning capacity of each locomotive and crew and a saving of two-thirds of the cost of equipping the cars used with the necessary permanent stakes and binders, provided always that the rates charged to shippers are fair and reasonable and represent the actual cost plus only a reasonable profit to the shareholders."

Now I have only quoted from one or two of our witnesses notwithstanding the fact that I feel we were pretty well represented and the following gentlemen all gave good, substantial and valuable evidence: Geo. F. Craig, Philadelphia; Robert G. Kay, Philadelphia; S. A. Kendall, Pittsburg; Hon. Nelson P. Wheeler, representative in congress from Pennsylvania; F. S. Underhill, Philadelphia; H. L. Price, representing the Shippers' Association of New Orleans; Leonard Bronson, manager National Lumber Manufacturers' Association of Chicago; James Sherlock Davis, New York City, of the Eastern States Association.

We were much impressed with the personnel of the committee, the interest that was manifest in our case, and the respect and courtesy with which our committee was received by them, and while we were greatly outnumbered by the railroad representatives and their array of counsel, together numbering about 150, we are egotistical enough to believe that the impression made upon the committee was, if anything, in our favor. We believe they were more or less aroused with the wisdom and justice of our position and somehow feel there will be a disposition on the part of the committee to offer some relief if they can agree upon a plan that will remedy the evil.

We think it is only fair to the committee to say that we do not expect our bill to be brought out as a whole, or possibly as a bill, but do hope that out of the many bills before the committee tending to amend the Hepburn bill that there will be created what may be termed an "Administration Bill" or a bill created by the committee, which may contain a clause that will provide for the relief we hope for.

Many letters have been written by various people deeply interested in this case, either to members of the Committee on Interstate and Foreign Commerce, or to their local representative in congress, asking them to bring all the influence they can to bear upon the different members of the committee in our behalf.

It is a well known fact that the National Lumber Manufacturers' Association is really the parent organization of affiliated associations comprising twelve of the largest associations throughout the country and through the kindness of their manager, Mr. Leonard Bronson, letters have gone out to all the secretaries of these various associations and through them much influence has been brought to bear upon the members of the committee.

We therefore most respectfully urge each and every one who is interested in this subject to lend his assistance to the work of the committee by addressing his local congressman on the subject, so as to have the shippers of forest products protected by reporting favorably on our bill or by having the Hepburn bill so amended that it will provide for the relief we have prayed for as the committee may deem best in its due and earnest deliberation of this matter. Respectfully submitted,

F. R. BALDWIN, Chairman.

E. E. Williamson, commissioner of the Receivers and Shippers' Association of Cincinnati, then gave an exhaustive talk on the same question, in which he touched various phases already familiar and protested vigorously against the injustice which present conditions impose upon lumbermen.

The session was then adjourned until 2:30 in the afternoon.

#### THURSDAY AFTERNOON SESSION

The afternoon session of March 3 opened at 3:05, the first business being the report of the Committee on Hardwood Inspection, read by Chairman J. L. Alcock:

#### Report of Hardwood Inspection Committee

Your Committee on Hardwood Inspection begs to report:—

Recently, there has been considerable activity aroused in behalf of "Uniform Standard Grades of Inspection Rules," but as yet no positive conclusion has been attained.

It is the opinion of your committee, that our association lend its efforts to the establishment of uniform standard grades, and we therefore recommend that the National Wholesale Lumber Dealers' Association place itself on record in the reaffirmation of the following resolution which was adopted at the annual meeting in March, 1908, on the recommendation of the Hardwood Inspection Committee:

"That it is the sense of this convention that the establishment of a single standard for the inspection of lumber is demanded by existing conditions and when accomplished will result in great benefit to the entire lumber industry, and would most respectfully recommend that all sections, associations and markets which at

JOSEPH A. BOLSER, ONE OF THE HOSTS

WM. A. BENNETT, ONE OF THE HOSTS

us to load carried with it a stipulation that we shall load or pay freight on 34,000 pounds or more and Master Car Builder rules setting forth how the car must be equipped and bound off in a workmanlike manner before it will be accepted or moved by the carrier at an expense for material and labor ranging from \$1.50 to \$7.50 a car, according to the location and the strictness of the officers under whose jurisdiction they move.

"Now right here, gentlemen, I desire to call attention to another very interesting feature. By the use of these stakes and equipment which we are now forced to supply at our own expense we actually enhance the earning capacity of each car from 35 per cent to 75 per cent, which puts the earning power of that car just that much ahead of a box for the same service. For example, take a 100,000 capacity box car, if the lumber is of suitable size to be loaded in a box car we can get probably 50,000 to 60,000 pounds on a car; on a gondola of the same capacity, which you all know costs only about one-half to two-thirds as much to build and maintain as a box car, with the use of these stakes and binders we can load as high as 110,000 pounds. Suppose these two cars were traveling from a common West Virginia shipping point to New York City, where the average rate of freight is about 16 cents, what would be the result? The box car with 60,000 pounds at 16 cents a hundred would earn \$96

this time hold local standards earnestly coöperate to this end that it may become in the broadest and most complete sense not only a national standard but an international standard, governing the inspection and measurement of the product of this industry."

Respectfully submitted,

J. L. ALCOCK, Chairman.

Next in order was the report of Lewis Dill of Baltimore of the Resolutions Committee, which follows:

#### Resolutions

RESOLVED, That this convention endorse the suggestions made in the address of Mr. George H. Holt, which looked to the establishing of equitable rates of premium charge in fire insurance, and especially that lumber risks may secure the right and low charge to which it is entitled in relation to other classes of fire hazard.

Further, That the appointment of a special committee to act in conjunction with others of like interest to ours, or such other action be taken by the association as may further this end, and that the Board of Trustees are requested to make effective this resolution.

WHEREAS, This association holds membership in the National Civic Federation and is in full

and with the aggressive and forceful actions being taken by that association in its varied work.

**RESOLVED**, That we endorse and will lend our active aid through committees and by individual support to the movement to obtain uniform state laws, especially as they may relate to negotiable instruments, warehouse receipts, stock transfers, bills of lading, etc.

3.

Appreciating the work and favoring the recommendations made by the Marine Insurance Committee through its report to this convention, be it

**RESOLVED**, That the suggestion of forming an organization or devising a way to better protect against costs, and in the security of the protection in coastwise marine insurance, that the Board of Trustees further consider the recommendations made in said report with the view of securing for our members the proposed advantages.

4.

**RESOLVED**, That this association endorses and advocates the passage in Congress of the Weeks' bill for the securing by the government of the Appalachian and White mountain forests as national reserves.

5.

**RESOLVED**, That the members of this association record their appreciation of the willing assistance given us by the trade association and by the lumbermen of Cincinnati, and that we extend our thanks for the many courtesies and the hospitality so generously extended by them.

6.

**RESOLVED**, That this association commends the many advantages of the Hotel Sinton as a place of meeting and tenders to the management its satisfaction with the way it has entertained our members.

7.

Recognizing the successful work of the executive officers and committees during the year just closing, we desire to express to them our appreciation of the services rendered, and especially to commend the faithful and very successful administration of the retiring president, Mr. George F. Craig.

Following the report of this committee, Mr. Dill delivered an appreciation to the late James Elliott Defebaugh, proprietor of the American Lumberman, which later will be put into permanent form and forwarded to his friends and family.

#### Trustees Elected

On behalf of the Committee on Nomination, Chairman Prescott offered the names of the following gentlemen to serve as trustees: F. R. Babcock, N. H. Wolcott, L. L. Barth, F. S. Underhill, J. V. Stimson, J. T. Moffett, and W. A. Glechrist. Upon motion of the secretary a unanimous ballot was cast on behalf of the association, and the nominees declared duly elected.

A brief report by Chairman Wolcott of the Committee on Trade Relations followed. The harmonious view expressed by Mr. Wolcott was substantiated by W. H. Hotchkiss and J. Sherlock Davis.

Appreciative addresses by Earl Palmer, Charles A. Marsh and O. O. Agler occupied the last half hour of the meeting, which adjourned about 4:30.

#### Meeting of Trustees

Immediately after, a meeting of the trustees was called, at which R. H. Higbie was chosen president; F. R. Babcock, first vice-president; F. E. Parker, second vice-president; F. W. Cole being reelected treasurer and E. F. Perry secretary.

#### Reception by Cincinnati Lumbermen's Club

The evening's entertainment was furnished by the Lumbermen's Club of Cincinnati, who tendered the association a reception in the large banquet hall of the hotel, at 6:30. An elaborate Dutch luncheon was served to visitors and local delegates, music being rendered in the meantime by the Hadyn Quartet and the Pork Chops colored band. Besides the regular consignment of cigars, cigarettes and eatables that are ever present at such functions, souvenir pipes were distributed among the guests. This very enjoyable affair closed at 10:30.

#### Attendance

1. George F. Craig, Philadelphia, Pa., George F. Craig & Co., president National Wholesale Lumber Dealers' Association.
2. R. W. Higbie, New York, R. W. Higbie Co.
3. F. R. Babcock, Pittsburg, Pa., E. V. Babcock & Co.
4. Fred'k W. Cole, New York, N. Y.
5. E. F. Perry, New York, N. Y.; secretary National Wholesale Lumber Dealers' Association.
6. W. W. Schupner, New York, N. Y.; National Wholesale Lumber Dealers' Association.
7. A. L. Stone, Cleveland, O., Nicola, Stone & Myers Co.
8. Cliff S. Walker, Cincinnati, Bayou Land & Lumber Co., and Lumbermen's Club of Cincinnati.
9. Lewis Dill, Baltimore, Md., Lewis Dill & Co.
10. W. S. Phippen, New York, N. Y., National Wholesale Lumber Dealers' Association.
11. H. H. Gibson, Chicago, Ill., HARDWOOD RECORD.
12. W. A. Bennett, Cincinnati, O., Bennett & Witte.
14. H. Ballou, Cadillac, Mich., Cobbs & Mitchell, Inc.
15. Chas. Duce, Chicago, Ill., American Lumberman.
16. C. R. Smith, Cadillac, Mich.
17. Wash Rees, Cincinnati, Ohio, HARDWOOD RECORD.
18. C. O. Shepherd, New York, N. Y., Davison Lumber Co.
19. Mrs. C. O. Shepherd, New York, N. Y.
20. J. A. Hilliard, New Orleans, La., Louisiana Red Cypress Co.
21. W. W. Hurdman, Buffalo, N. Y., National Lumber Insurance Co.
22. F. H. Reilley, Buffalo, N. Y., W. W. Reilley & Bro.
24. J. A. Bolser, Cincinnati, O., Blackburn & Bolser.
25. Harry K. Mead, Cincinnati, O., E. V. Babcock & Co.
26. E. Earl Griffin, Cincinnati, O., Louisiana Red Cypress Co.
27. R. D. Baker, Pittsburg, Pa., The Empire Lumber Co.
28. C. C. Lincoln, Marion, Va., Look & Lincoln.
29. Thos. Hughes, Troutdale, Va., Iron Mountain Lumber Co.
30. D. W. Kerr, Columbus, O., Whitacre Lumber Co.
31. A. J. Bond, Bradford, Pa.

times" is, "While he is asleep let's do him."

But listen; we hear something in the wireless atmosphere that the lumber associations mean to make the consumers members of their organi-  
 zation. This would be very satisfactory indeed  
 in one way, if consumers enough would join so  
 as to make an even number or more with the  
 lumber dealers, then their combined efforts might  
 get up a standard of rules that would be satis-  
 factory to and thoroughly understood by every-  
 one.

However, after all this was settled it would  
 not eliminate the trouble or tell a man he must  
 not "doctor up" the grade, as they call it. Can  
 it be possible that the only way out of this trouble  
 would be to legislate on it, making it a national  
 affair and imposing a heavy penalty for such a  
 misdemeanor? Why not legislate on the lumber  
 business the same as was done by weights and  
 measures? This was only to give the purchaser  
 the full value of his money, and we think there  
 is nearly a parallel case in the lumber business.

This epistle may look a little antagonistic, but  
 it is not so meant. It is telling a few every-  
 day facts to help bring about an evolution of the  
 legitimate grading of lumber, and as our honor-  
 able ex-President Theodore Roosevelt has stated,  
 "a square deal for every man."

Now, if the lumber dealers and consumers in  
 our city would come together and unite their  
 efforts and invite the lumber associations and all  
 the consumers of the country here this summer,  
 when the Chautauqua Lake season is at its best,  
 and at the time of our great 1910 centennial, we  
 think something might be done in the betterment  
 of the lumber business. A JAMESTOWN (N. Y.)  
 CONSUMER.

To the foregoing communication the fol-  
 lowing reply has been made:

CHICAGO, ILL., February 28.—Dear Sir: The  
 trouble with you, in common with a great  
 many wholesale hardwood consumers is that  
 you do not take advantage of the facilities  
 placed at your disposal in securing "a square  
 deal" in your lumber purchases. There is no  
 excuse for any buyer of hardwood lumber,  
 if, when he makes his purchases, he specifies  
 that it shall be under the rules of either the  
 Hardwood Manufacturers' Association of the  
 United States, or under the rules of the Na-  
 tional Hardwood Lumber Association, not get-  
 ting exactly what he buys or having a rein-  
 spection that will insure him in getting what  
 he buys.

The intelligent buyer will not permit the  
 seller to work off "special grades," "fur-  
 niture common," or anything else on him,  
 but will specify that he is buying under a  
 certain grade of one of the leading lumber  
 associations. If the lumber received does not  
 correspond with his purchase according to the  
 rules, he has the privilege of calling for a re-  
 inspection, and at the present time there is  
 no reason to believe that he will not secure an  
 absolutely honest reinspection, and if the  
 lumber is not according to specifications he is  
 not obliged to accept it.

You, in common with many other wholesale  
 hardwood consumers, neglected to accept the  
 invitation of the Hardwood Manufacturers'  
 Association of the United States, when they  
 asked you to come to their Cincinnati meet-  
 ing and present your claims for any needed  
 change in hardwood rules. To be sure a good  
 many buyers of hardwood in leading lines did  
 present themselves, and their suggestion for

## Hardwood Record Mail Bag

### The Sleeping Consumer

JAMESTOWN, N. Y., Feb. 24. Editor HARD-  
 WOOD RECORD: Since studying your pleasing and  
 suggestive cartoon in the special Cincinnati issue  
 of HARDWOOD RECORD, have thought of volumes  
 to say or write about, which may be interesting  
 to the readers of your paper.

It is quite evident that the consumer has been  
 asleep since way back when the hardwood manu-  
 facturers began making their first rules of in-  
 spection.

The consumer has simply been taking what  
 the producer felt disposed to give him, with the  
 exception of a few who are probably up to the  
 tricks of the trade in their own business, and  
 are thus suspicious that the lumber producer  
 and dealer have a few tricks too, and so investi-  
 gates, as he has learned that "investigation is  
 the art of trade."

It is a query to many about those "Peace  
 Offerings" to know just what they are supposed  
 to be. When you consider the way lumber pro-  
 ducers and dealers are shipping to consumers;  
 when the consumer buys straight firsts and sec-  
 onds for the seller to put in about twenty-five  
 to thirty per cent of No. 1 common, and say noth-  
 ing about it, expecting the stock to go through  
 as firsts and seconds; and when they buy straight  
 No. 1 common to send fifty to one hundred per  
 cent of No. 2 and 3 common instead, it looks  
 very much to me as though the peace offerings  
 were not meant as such.

We do not doubt in the least that there are  
 many honest lumber manufacturers and jobbers,  
 who give a man just the grade he buys as near  
 as they can, but it seems that a majority of  
 them are all up to the same tricks.

We know that when we buy log run of any  
 grade we generally get only about one-third of  
 the log run grade, as the stock of one grade is  
 divided into several grades according to widths,  
 saps, strips, etc., as the case may be. Now the  
 consumer does not blame the manufacturer and  
 jobber for so doing, as they want them to make  
 all they can in a legitimate and honest way, if  
 the jobber tells the way he manipulates the stock  
 and grades and his several prices according to  
 the several grades but of one grade. Having  
 done this let the consumer tell what he wants  
 and when he buys such and such grades, instruct  
 your inspector to put up an honest grade, giving  
 the man a square deal, instead of telling your  
 inspector that they haven't an inspector on the  
 other end or they haven't a very good man there,  
 and so he can put in twenty-five to fifty per-  
 cent below the grade bought. But when you take his  
 coat and he becomes bankrupt, because of using  
 a cheap grade stock, can you sue him to see

if you can get his cloak also. Do you think you  
 can make him a "friend of yours"?

I remember a consumer who once bought ten  
 cars of No. 1 common plain oak and went to the  
 wholesaler's yard to take it up. First the con-  
 sumer was shown a pile of No. 1 common, and  
 mounting to the top of it discovered to his sur-  
 prise that it was No. 3 common. He soon made  
 it plain that that was not what he wanted, and  
 was shown another pile of supposed to be No. 1  
 common, and mounting to the top of this pile  
 found to his utter astonishment it was No. 2  
 common. Then he told the wholesaler if this  
 was what he called No. 1 common he might as  
 well go home.

"Well, now, I declare," he says, "let's try this  
 pile. I think this will suit you." After mount-  
 ing this pile he had to lay out about one-third of  
 the stock which was No. 2 common. So, if he  
 had not been "up to snuff" he would probably  
 have taken the No. 2 or No. 3 common and the  
 wholesaler was dishonest enough to "do" his  
 brother good.

A jobber told me of another consumer who  
 received a car of lumber, supposed to be No. 1  
 common, and it looked so bad to him that he  
 had to refuse it. So he went to a jobber's  
 yard, and the jobber told him he was quite  
 sure he had a grade to suit him, and showed him  
 a pile of No. 2 common. The consumer, "being  
 asleep" and not "up to snuff" on the grading of  
 lumber, took the pile of No. 2 common.

When one lumber dealer sells to another dealer  
 a car of firsts and seconds or No. 1 common, or  
 whatever it may be, the buyer gets his grade as  
 a general thing, as the seller knows the other  
 end of the line is well up on grading, and so he  
 sends a more technical grade. Then out of that  
 grade of No. 1 common the buyer puts the select  
 common boards into a pile by themselves. Then  
 the consumer comes along and wants some firsts  
 and seconds and this pile of select common is  
 what the consumer has to take.

A lumber dealer sold us a car of lumber about  
 six months ago; it was supposed to be No. 1  
 common and better. We inspected about two-  
 thirds of the stock and found a large per cent  
 of thin lumber and No. 2 common. Of course,  
 we could not use the stock, so we had to refuse  
 it. The dealer afterward told us he sold it for  
 No. 1 common and better and got more out of it  
 than if we had taken it. He then said to me,  
 "What do you know about that?" I simply told  
 him the other fellow did not understand what  
 he was doing.

When we see car after car coming in and a  
 large portion of the stock below the grade  
 bought, it is time the "sleeping consumer" woke  
 up. It looks to me as though "the spirit of the

changes in rules that would be nearer just to both buyers and sellers were carefully threshed out, and in numerous cases the suggestion of the buyer was incorporated in the rules.

If you would simply exercise your citizenship in hardwood associations you could get every reasonable concession that you ask for in the way of grades, and you could be positively assured of a square deal on the lumber bought. Why should you ask the members of the hardwood associations to meet you at a point remote from hardwood production to thresh out matters of vital interest to you?

Why, as an individual, did you not meet them half way, and attend the conference at Cincinnati.

It strikes me that you have neglected the opportunity presented and that you have no kick coming.—EDITOR.

#### Wants Back Numbers of Hardwood Record

ST. PAUL, MINN., Feb. 28.—Editor HARDWOOD RECORD: We want copies of the following issues of HARDWOOD RECORD: October 25, 1907; November 10, 1907; November 25, 1907; December 10, 1907, and February 10 and November 25, 1908. How many of these can you furnish and at what price? Could you "dig up" those numbers which you cannot furnish yourselves?

G. DUNN & Co.,

403 St. Peter street, St. Paul, Minn.

We have supplied the November 25, 1908, issue, but haven't an extra copy of any of the other numbers asked for. If any of our readers are willing to sell such of the above named RECORDS as they may possess G. Dunn & Co. will pay a premium for same.—Editor.

#### Have Had No Fire

CHICAGO, March 7.—Editor HARDWOOD RECORD: The trade paper called Veneers, published at Indianapolis, in its March issue announced the destruction of the Bacon-Underwood Company's plant at Mobile by fire, and that it would be rebuilt at once. It is hardly possible that a paper of your standing would publish a report such as this without verification, but at the same time we take this opportunity of advising you that the Bacon-Underwood Company has had no fire whatsoever at its plant. R. S. BACON VENEER COMPANY.

#### Trouble in Business Men's Club of Cincinnati

Ever since "Lew" Doster, secretary of the Hardwood Manufacturers' Association of the United States, moved to Cincinnati there has been more or less trouble in that town. Right now, from sundry documents that have reached the editor's table, there are indications that his "sphere of influence" has reached the Business Men's Club of Cincinnati. Just read the following.—EDITOR.

#### FIRST SPRING REPORT OF THE CHIEF GAME WARDEN.

We have resolutions to be presented to the Stenwinders for their floral offering at our opening.

The Engineer's table wrote their autographs on the menu card and sent it with their greetings—we should return the compliments.

The Stenwinders had the audacity to endeavor to place an injunction against us. We have a reply and defense for the same which we believe will keep us still in existence.

I am informed that during the week the members have not been coming regularly to this table, and should state that the eyes of the entire universe were and are on the Woodpeckers from the very beginning. Now we must keep it

up. In the weekdays we must invite our friends, our enemies, and everybody connected in the lumber trade who are visitors, to come to this table. By such concerted action it will become a regular down-town meeting place for everybody.

LEWIS DOSTER,  
Chief Game Warden.

March 5, 1910.

#### BILL OF COMPLAINT

Charles H. M. Atkins, Edward E. Shipley, James F. Taylor for themselves and others associated under the name and style of the Stenwinders vs. Lewis Doster, Gregory S. Stewart, C. R. Stansbery, Clinton Crane, Thomas J. Moffett, Chester F. Korn and others associated under the name and style of the Woodpeckers.

To the Honorable the Directors of the Business Men's Club Company:

This bill of complaint respectfully shows that the complainants, Charles H. M. Atkins, Edward E. Shipley, James F. Taylor who sue for themselves and for others too numerous to set out here respectfully shows:

That these complainants and others did heretofore, to-wit: about the year 1909 associate themselves according to the rules and regulations of the Business Men's Club Company as a table club and that a distinctive and distinguishing title for said club they did adopt as the name thereof the word "Stenwinders," by which name they and such others as have been regularly admitted to membership have ever since been known and called; that said club further adopted as an emblem a certain large clock which is suspended over their table; that by reason of the fact that said name was first suggested and proposed by your complainant, James F. Taylor, the high standing of the members of said club, their prominence in the Business Men's Club, the fact that three or more of their members became president of said Business Men's Club, their victory over the table called the Knockers in a certain contest called a "tug of war" at a certain place called Laugbery, the pleasing sound and appropriate quality of the said name, it came widely and favorably known as the title or cognomen of your complainants so associated.

And your complainants state that prior to the infringement hereinafter complained of said name has been generally known as the sole and exclusive property of your complainants and their exclusive right thereto has been acquiesced in by all the world. Notwithstanding which the defendants wickedly contriving and conspiring unlawfully to acquire for themselves some part of the fame and renown of your complainants did form on to-wit: the 19th day of February, 1910, a certain similar club to which they have given the name "Woodpeckers."

Now your complainants show that the said club of said defendants is greatly inferior to that of the complainants in material composition and organization, but that nevertheless the defendants are proceeding and will, unless restrained therefrom, proceed to palm off upon the public the said inferior and spurious substitute as being the same as your complainants, all to your complainants' great and irreparable damage, for which they have no adequate remedy at law.

Wherefore your complainants pray that they and their associates may be decreed to have the sole and exclusive right to said name and all synonyms, equivalents or variations thereof, and that defendants may be enjoined and restrained from using the said name "Woodpeckers" or any synonym, equivalent or variation thereof, or in any way infringing upon said name of complainants and for all other proper relief.

C. H. W. ATKINS,  
EDWARD E. SHIPLEY,  
JAMES F. TAYLOR,

For themselves and associates, complainants.

ORIS P. COBB,

OLIVER G. BAILEY,

Solicitors for complainants

#### BILL OF EXCEPTIONS

Stenwinders vs. Woodpeckers.

To the Honorable and Other Directors of the Business Men's Club Company:

Affiants state to the honorable court that the bill of complaint filed by the Stenwinders and others has no basis in fact, or evidence, and is an attempt to deprive the defendants of a popular, honored and much sought name; that such complaint should in no sense be made by an association which has adopted so menial a device as a clock, for "time was made for slaves alone."

Furthermore, it does not behoove us to boast of past deeds nor future undertakings, but the filing of this suit compels us to say as did the Irishman to the doctor, "You flatter us."

The defendants further state that this association, if formed for the general improvement of morals, and especially as relative to the use of the English language, as per our constitution, article 25, section 11, to wit: "No member shall work off any ancient or moss-grown jag, joke, repartee, pun, allusion to or allusion of, or any double entendre in connection (no joke intended) with the honorable, true, tried and dependable name of this organization, which has stood so long, and may like "the Roman Catholic church stand forever," and any other word.

Furthermore, the defendants while partly admitting one statement of complaint that while our organization may be inferior in "material composition and organization," we possess that which enabled Caesar and Napoleon to overcome the greatest odds: Brains.

Now your defendants, coming into court with clean hands, ask that the complaint be debarred from further annoyance of the defendant and be required to mark time while we stand erect on our preserves, free from interference or competition in our rights to life, liberty and the pursuit of happiness.

Wherefore the defendant prays your honorable court that the case be dismissed, and if the instigator of this accident or "the man higher up" can be discovered that he be exiled to the grill room and condemned to associate with the Knockers for thirty days.

Furthermore, your defendants pray that the brand of liquor which leaves a man in such a condition that he cannot discriminate between the Pacific Calm and the unpretentious word Stenwinder and the expressive, dignified and martial word Woodpecker be carried from the B. M. C.

Signed by defendants and by counsel for defendants.

#### Big Eastern Selling Merger

One of the biggest deals in the eastern trade was closed the latter part of February, when after three days' conference among prominent manufacturing and wholesale interests the Manufacturers' Lumber Company was organized with headquarters at 27 William street, New York City, with the following officers: Hon. W. C. Edwards of Ottawa, Can., president; Hugh McLean of Buffalo, first vice-president; Gordon C. Edwards of Ottawa, second vice-president; Maurice Preisch of Buffalo, secretary, and Van W. Tyler, New York, treasurer and manager, with Desmond N. Meighan, assistant treasurer, and Christopher Cox, assistant secretary. This company was formed for the purpose of handling the lumber products of the following firms, representing large outputs of white pine, spruce, hardwoods, etc.:

W. C. Edwards & Co., mills and yards at Ottawa and Rockland, Ont.

Robinson-Edwards Lumber Company, mills and yards at Burlington, Vt.

Hugh McLean Lumber Company, mills and yards at Buffalo, Cincinnati, Memphis, Chattanooga and Birmingham.

Haines Lumber Company, mills and yards at North Tonawanda.

Bathurst Lumber Company, mills and yards at Bathurst, N. B.

Cascapedia Manufacturing & Trading Company of Bonaventure and New Richmond, Quebec.

This is practically a consolidation of the selling departments of these firms. The new company will also pay special attention to the export lumber trade. Van W. Tyler, sales manager of the company, has been identified with the New York trade for many years and is widely known in export circles. He will be assisted by a corps of five competent salesmen, and the Manufacturers' Lumber Company will cater to the trade of southern Connecticut, southern New York, the state of New Jersey and the Metropolitan district.

#### Correcting an Error

The Record regrets to announce that in the last issue of February 25 appeared a very carelessly prepared statement in regard to the Underwood Veneer Company of Wausau, Wis. This item stated that the company had been incorporated with \$20,000 capital stock, when, as is generally well known among the hardwood trade, this concern has been in existence a good many years.

What should have been announced was the amendment of the articles of incorporation of the company, increasing the capital stock from \$20,000 to \$120,000. The company has the following officers: J. A. Underwood, Wausau, Wis., president; A. W. Underwood, Chicago, vice-president, and Otto C. Lemke, Wausau, secretary and treasurer.

# Monthly Meeting Chicago Hardwood Lumber Exchange

The Chicago Hardwood Lumber Exchange followed the monthly luncheon at the La Salle Hotel on Saturday, February 26, with a meeting of unusual interest to those present. Judging by the general and earnest discussion of matters pertinent and important to the lumber industry, the session will be fruitful of action along various lines having an important bearing on the trade.

The attendance was indeed gratifying, particularly so considering the inclemency of the weather. President Brown is to be congratulated on the spirit of enthusiasm and energy with which he has imbued the members.

Of special interest were the report of Chairman Trainer of the Market Conditions Committee, and a list of suggestions by President Brown in which he put on record certain policies long fostered by him. Following this was a general discussion of all phases of the recommendations submitted. Secretary Hooper of the Lumbermen's Association of Chicago talked intelligently and to the point on the demurrage question; his views should be of benefit to all who heard them.

Officers of the other local lumber organizations were present as special guests, with a view to initiating the movement toward a single Chicago association advanced in President Brown's special address.

Following the reading of the minutes, by Secretary Dion, in which an attendance of fifty-eight at the last meeting was reported, the president called for the reports of the Market Conditions and Labor Committees, Chairmen Trainer and Schreiber responding in comprehensive style.

In response to the call of the chair, President Agler of the National Hardwood Lumber Association addressed the attendance. He reiterated previous invitations to the coming convention of that body at Louisville in June.

President Brown's recommendations, before referred to, were the cause of general discussion, at his earnest request. They were read by the chair and well merited the close attention accorded them. The address:

It is our pleasure today to have as special guests of honor the officers of our local contemporaries, the Lumbermen's Association and the Wholesale Lumber Dealers' Association. Coming together at this time to break bread at the same board is most significant, inasmuch as it typifies the virtue which is our greatest fortress of strength, namely, harmony.

These three bodies are strictly commercial organizations primarily instituted for the sole purpose of enhancing our material well being by establishing justice and fair dealing which will attract the outside manufacturer and consumer of lumber by promoting the general welfare of the trade, which can not but redound to our profit and by insuring among the various branches of wood industries, which we severally represent, the stability of our organization and the sincerity of purpose back of our policies. These thoughts, together with a study of similar organizations in other cities during the last year impel me at this time to give utterance to an idea which I have long fostered and in which I am confident some of you gentlemen share. We must make a success of our individual business enterprises and, therefore, we must have at our backs the most efficient organization possible. I firmly believe that the imaginary lines which form the boundary between these organizations should be wiped out. They have served their purpose and are now obsolete.

Chicago stands preëminent as the world's greatest lumber market and should have an organization of lumbermen commensurate thereto.

The membership of our organizations is so interwoven as to make the roll of members almost lose its identity. The salient reasons for the existence of all of these bodies are identical. We differ, if at all, only in the application of minor ideas. It is a matter of conservation of effort as well as utility and economy which should warrant our union.

We look with great satisfaction to the wonderful strength and accomplishment of the Chicago Association of Commerce. How much more it is accomplishing than could be possible if its

forces were divided into three bodies. Should the feasibility of such a union into one association of lumbermen meet with your approval after giving its full consideration and study any differences of policy affecting any phase of the lumber business as we individually view it could be advanced through the work of departments or committees. With such a union Chicago would have the most powerful local organization of lumbermen in the world, whose undertakings would command respect everywhere and result in bringing about more speedily an improvement among various lines which most especially concern our business. We have come, gentlemen, to the point where such an organization seems to me to be imperative as well as the most logical thing for us to do. Strong objections may be urged against such a plan, some of them possibly growing out of old differences that may have existed in times past. In this age, however, we can not live in the past but must ever keep our face toward the future and our back toward the past. It therefore seems apparent that the advantages gained would in the aggregate greatly overwhelm the objections.

Following the reading of the address, the chairman called on the special guests for their views on the subject. President Gillespie of the Lumbermen's Association of Chicago, Vice-President Slayton and Secretary Hooper of the same body, Chairman Westcott of the Exchange Membership Committee and secretary of the Chicago Wholesalers' Association responded in order, the trend of their remarks being heartily in support of President Brown's proposition.

During his talk Mr. Hooper, in touching on the demurrage question, referred to the benefits accruing to yard dealers through the so-called average plan embodied in Rule XII. By this arrangement, if a consignee is enterprising enough to unload a car within twelve hours of the time limit, he is credited on his next car with that length of time. The speaker maintained that such a rule would not only materially help both dealers and the railroad service, but would eventually do away altogether with the payment of demurrage.

Supplementing these remarks, President Brown raised the question as to whether or not a common carrier has the legal right to hold up cars, pending the settlement of disputed demurrage claims, and actual payment of such demurrage. A most aggravating instance in his own business was used by the president to emphasize his point, as well as a case involving four hundred cars consigned to the Illinois Steel Company, the cars being held on the same pretext. Drastic and immediate action was recommended, in order to call the bluff of the railroads and to guard against similar outrages in the future.

Following the discussion on the consolidation question, Chairman Schreiber moved that the matter be referred to the Trade Committee who, after conference with similar committees from the other bodies, will report to the exchange. The motion was adopted with the amendment proposed by Mr. Agler, to the effect that the Board of Managers be substituted for the Trade Committee.

The last business transacted was the appointment of two nominating committees by the chair, to report within two weeks on selections of officers for the ensuing year, the next meeting being the regular annual. The personnel of the committees was: First, Theodore Fathauer, C. L. Cross and F. M. Baker; second, J. S. Trainer, O. O. Agler and A. H. Schoen. Contrary to usual custom there will be two ballots, which in due time will be mailed to all members.

Following is a roster of the attendance:

Charles Westcott, Hayden & Westcott Lumber Co.  
Harvey Hayden, Hayden & Westcott Lumber Co.  
Tom A. Moore, T. A. Moore & Co.

Theo. Fathauer, Theo. Fathauer Co.  
Robert Maisey, Maisey & Dion.  
Louis A. Smith, Fullerton-Powell Hardwood Lumber Co.  
Murdock MacLeod, Oconto Co.  
J. W. Slayton, Mears-Slayton Lumber Co.  
Edwin E. Hooper, Lumbermen's Association.  
J. L. Lane, J. L. Lane & Co.  
F. B. McMullen, Fullerton-Powell Hardwood Lumber Co.  
F. C. Van Norstrand, Cotton Belt Lumber Co.  
George T. Mickle, George T. Mickle Lumber Co.  
Robert H. Gillespie, John Gillespie Lumber Co.  
J. H. Dion, Maisey & Dion.  
G. A. Larson, Fink-Heidler Co.  
W. G. Commentz, G. W. Jones Lumber Co.  
H. D. Welch, E. A. Thornton Lumber Co.  
E. J. Leech, Paepcke-Leicht Lumber Co.  
C. H. Wolfe, Heath-Witbeck Co.  
C. I. Holle, Heath-Witbeck Co.  
O. O. Agler, Upham & Agler.  
A. H. Ruth, G. W. Jones Lumber Co.  
J. D. Attley, J. M. Attley & Co.  
J. J. Fink, Fink-Heidler Co.  
T. J. Scanlon, May Bros., Memphis, Tenn.  
R. S. Corson, Upham & Agler.  
J. G. Brown, W. P. Brown & Sons Lumber Co., Louisville, Ky.  
C. L. Cross, C. L. Cross.  
J. C. West, Midland Lumber Co., Parkersburg, W. Va.  
F. H. Ostrander, D. K. Jeffris & Co.  
Frank F. Fish, National Hardwood Lumber Association.  
William C. Schreiber, H. H. Hettler Lumber Co.  
Frederick L. Brown, Crandall & Brown.  
J. S. Trainer, Trainer Bros. Lumber Co.  
R. A. Lounsbury, Maisey & Dion.  
Charles S. Smith.  
S. C. Hostler, American Forest Co.  
Winter F. Clark, Winter F. Clark.  
George K. Thayer, Empire Lumber Co.  
M. Bratz, Empire Lumber Co.  
S. C. Bennett, Hardwood Mills Lumber Co.  
H. C. Miller, Hardwood Mills Lumber Co.  
F. M. Baker, Hardwood Mills Lumber Co.  
William A. Eager, William A. Eager.  
Alex. H. Schoen, Columbia Hardwood Lumber Co.  
E. W. Meeker, HARDWOOD RECORD.  
H. H. Gibson, HARDWOOD RECORD.

## The Lumber Output of Missouri

While other states are ahead of Missouri in the quantity of yearly production, but few excel that state in quality of lumber output. The figures for 1909 compiled by the Red Book of the Bureau of Labor Statistics of that state point out the following interesting facts:

Missouri stands foremost in the production of red gum cooperage stock, while her production of walnut lumber is only surpassed by two other states. She occupies second position in sycamore trade, being outranked only by Indiana. For red gum lumber Missouri holds third place, ranking next to Mississippi and Arkansas.

While this state is not generally classed as a lumber or cooperage producing state, when certain timbers like walnut, red gum, oak, ash, hickory, tupelo, elm and cherry are separated from the other, the high standing of the community is at once very evident. She produces high-grade timber, which in reality yields far greater dividends than the much larger production of low-grade stocks, which abound in some of the rival states.

The figures referred to place the output of Missouri for the last year at 453,938,000 feet, with a value of \$8,208,927 at the mills and \$8,719,822 St. Louis. The cooperage output consisted of staves, headings, hoops, baskets, boxes and wagon and furniture timber in the flat, handles of all kinds, egg cases, pencil slabs, walnut gun stock, spokes, bent wood, crates, etc., with a value of \$5,869,800. There were 10,110,700 railroad ties cut, which sold for \$4,044,200.

Red gum is the principal material used in the manufacture of cooperage supplies, while for hoops elm is the favorite wood, though several of the cooperage factories turn out considerable quantities of red gum hoops.

## Appalachian Reserve Question

A recent bulletin of the American Forestry Association meets in an emphatic manner the three principal arguments advanced by opponents of the Appalachian Forest Reserve. A recent speech of President Guild of this association is almost completely embodied in the bulletin, a digest of which follows:

Whether the money spent to preserve the forests on the watersheds of the Appalachians comes as an appropriation from the national treasury or from the revenues of the existing forest reserves in the western states, the East and South have a right to ask the same attention to their development at the hands of the national government as has been already given to the West, and with universal approval.

The opponents of the creation of Appalachian National Forests at the hands of the general government have given three specific reasons for their attitude. They claim:

1. Forest reserves do not promote regular stream-flow. Their creation, therefore, would be a useless expense.

The only authority for this mistaken statement is the opinion of an officer of the United States army whose profession identifies him with military rather than with civil engineering. The hostile opinion of the military engineering officer is in direct opposition to that of the entire force engaged under the forester of the United States, and to the experience of China, of France and of Spain.

James S. Whipple, forest commissioner of New York, is credited with the following:

"More than 300 years ago France, in an evil day, permitted that which we are now permitting, to wit: the cutting of all its trees, which left its hillsides and mountain tops uncovered. The agricultural lands were much injured; the water supply much reduced. It had no forest, the hillsides were eroded, the soil was washed away. Then a splendid man, realizing the enormity of the evil that had come to his country, started out on a campaign of education over France, urging the people to plant trees. Since then the French people have expended more than \$200,000,000 in trying to reforest their waste land, and they have more work yet to do."

The opponents of Appalachian Forest Reserves present as their second objection:

2. The acquisition of forest reserves by the national government is unconstitutional.

The constitution in terms was ordained and established to "promote the general welfare." If the establishment of a permanent source of timber supply, the preservation of the water and of water-power, the drainage of cities, and the preservation of the public health, all of which are provided by the acquisition of forest reserves, do not make for the promotion of the general welfare, it is difficult to say what does.

Nobody questions the constitutionality of various other public enterprises, presumably

for the public good, as inland waterway promotion, western forest reserves, the purchase of lands for fortifications, etc. Why doesn't the Appalachian bill come under the same ruling?

The third argument against the reserve is:

3. The separate states in which forest reserves are proposed should pay for them out of their respective state treasuries.

The answer to this statement is that, with the exception of New York, and one or two others, the states separately cannot afford it.

One of the most needed of these reserves is in the state of New Hampshire, about the headwaters of many of the great rivers of New England, already shrunken in volume, already damaged as a result of the neglect by a national government that has been lavish in its expenditures to save woods and water-power and water supply for the states beyond the Mississippi. The little state of New Hampshire cannot afford, with her small population and rocky soil, to buy and manage such a reserve.

The nation, however, out of taxes, to which New Hampshire contributes, has maintained national forests of 25,605,700 acres for the rich state of California alone, and last year added 2,364,483 acres to the national forests located in that state.

California and her citizens receive the direct benefit of these forests. New England does not. It was not California alone that paid the bills of the war with Mexico. The support in California, led by one of her governors, of Appalachian reserves shows that Californians themselves appreciate that such a course is not merely generous, but just.

Not one state of the old thirteen that fought the Revolution is benefited directly by these reserves—not one state that helped to pay for the Louisiana purchase is directly benefited by these reserves—not one state that fought the war of 1812 is benefited directly by these reserves—not one state taxed to pay the bill for the cession of Florida by Spain is benefited by these reserves.

No existing national forest has been acquired and paid for, none is even now exclusively maintained, by the people of any state or states directly benefited by it.

It is true that the extensive forest reserves in the West were taken out of the national domain, but who paid for the national domain, and reserved these lands for the local benefit of the new states? Was it not the very states who then composed the Union, the very states whom the new sectionalism would now cut off from receiving a small part of benefits such as they have been given?

Whatever develops any part of our country is for the benefit of every American. The states that are asking for Appalachian Forest Reserve are merely asking for themselves what they have already gladly helped to give others. For the first time in our

history the governors of South Carolina and of Massachusetts have stood side by side before the committees of Congress in this appeal for simple justice and common equity. If the maintenance of national forests is a wise policy, that policy should be indeed national and no longer sectional in its scope.

### Semimonthly Memphis Lumbermen's Club.

The regular semimonthly meeting of the Lumbermen's Club of Memphis was held at the Hotel Gayoso on Saturday afternoon, March 5. Luncheon was served and the attendance was large.

W. R. Barksdale, chairman, and other members of the entertainment committee, received a vote of thanks for the splendid work they did in arranging the details of the annual banquet of the club.

Geo. C. Ehemann, chairman of the Committee on Statistics, stated that he has mailed blanks to the members to be filled in with information which the committee desires. When these answers have been received, the committee will compile statistics showing the volume of business handled by the members, also other interesting features regarding the lumber industry of Memphis. There have been no such statistics compiled during the past three years and something new along this line is desired, as it is felt that the old statistics which have been used for so long do not do Memphis justice.

A. L. Foster, chairman of the River and Rail Committee, called the attention of the club to the decision handed down by the Interstate Commerce Commission in regard to the minimum weight of car lot shipments. He stated that, in accordance with the decision, if a shipper orders a car in writing from a railroad company and specifies the minimum weight, it is impossible for the carrier to recover from the shipper even if the amount loaded into the car is not up to the minimum for that special car. In other words, if a shipper orders a car of which the minimum weight is 30,000 pounds, and the railroad furnishes a car whose rating is 34,000 pounds, the shipper cannot be held for freight on the additional 4,000 pounds.

A letter was read by Secretary Thompson from the Helena (Ark.) Board of Trade stating that there was a desire to organize a club in Helena somewhat similar to the Lumbermen's Club of Memphis.

There were five applications for membership, four of which will receive serious consideration at the hands of the membership committee. The fifth was somewhat of the nature of a joke at the expense of John W. McClure, first vice-president of the club. After the secretary had read the first four names, he was handed an additional blank in which the name was stated as J. W. McClure, Jr., residence address, Carr avenue, business address, Randolph Building, and firm associated with the Bellgrade Lumber Company, Memphis. In response to the question as to whether or not the applicant was interested financially in said firm, it was stated that he was not but that he expected to be. As to the capacity in which he was employed, it was stated that he was a silent but noisy partner.

There were several visitors present, including George I. Hull of the Webster Lumber Company, Swanton, Vt.; H. J. Dudley of the Dudley Lumber Company, Memphis and Grand Rapids, and Joseph J. Hyde of Geissel & Richardson, Philadelphia.

In the announcement of the meeting, Secretary Thompson included the recent resolutions of N. Butler Haynes, looking to the formation of a lumber exchange at which transactions in lumber might be conducted during certain hours of the day. This subject will come up for consideration at an early date.

# How to Reduce the Fire Hazard and Obtain a Low Insurance Rate in Sawmills

The Insurance Standard Woodworker makes one valuable suggestion for cutting down fire risk in new mills, thus lowering insurance rates considerably. For the most part the following matter is quoted verbatim from a pamphlet bearing the above title, issued by the Lumber Insuring Mutual Companies, which include the Lumber Mutual Fire Insurance Company of Boston, the Pennsylvania Lumbermen's Mutual Fire Insurance Company of Philadelphia, the Lumbermen's Mutual Insurance Company of Mansfield, O., the Central Manufacturers' Mutual Insurance Company of Van Wert, O., and the Indiana Lumbermen's Mutual Insurance Company of Indianapolis. This pamphlet first takes up the subject of general construction, walls, floors and roofs, etc., and then goes into regulations for equipment, as follows:

## Construction

**WALLS.** All brick, cement and stone walls unless mill is unexposed should extend full thickness of top story wall 2' above roof and be stone or tile coped. Walls should not be pierced by timbers unless same are set in self-releasing anchor blocks, but wall should be ledged for their support. Openings in exposed walls should be protected by standard automatic fire doors and shutters. Openings in division walls should be as few as possible, and each should be protected by two automatic standard fire doors, one on each side of the wall. No belt holes should be allowed in division walls. Wooden walls should be of "slow burning" construction, i. e., timber and planks. Posts 8"x8" or larger, sheathed with 3" matched or tongued and grooved plank, clapboarded and painted or iron clad.

**FLOORS.** Bottom floor should be plank, laid directly on ground or in coal tar concrete; or be cement or brick. There should be no space beneath bottom floor unless this floor is of "slow burning" construction without an opening in it and access to space beneath from outside cut off by heavy wire screening. Floors above the bottom floor should be "slow burning" construction, i. e., timber and plank, no joist.

Roofs should be of "slow burning" construction, similar in construction to the floors, though posts and beams may be slightly smaller. Roof plank should be 3" and in cold location, paper and 1' boards are added on top of plank. The covering of plank should preferably be tar and gravel. Don't have any shingle roofs, for there is a charge of \$2.50 per \$1,000 of insurance for shingle roof on a mill, and it is a prolific cause of fires.

**SKY LIGHTS** should be glazed with one large pane of wired glass, and all outside woodwork tin covered.

**HOLES IN FLOORS** should be avoided. The standard floor has no holes in it, stairs, belts, elevators, steam, gas and water piping and electric wiring passing from story to story in a tower outside of the mill. Have shafting overhead, and belt down to machines and not up through floors. Main belt should be in a tower outside of mill. Stairs and elevators should be outside; can be inside if they have automatic trap doors at each floor, as heavy as the floors, or tin clad metal links.

Electric drive direct connected does away entirely with danger from this source. Steam pipes through floors should be jacketed, not thimble, i. e., the surrounding iron guard should extend all the way through the floor. Water and gas pipes through floors can be thimble. Electric wires at floors should pass through porcelain tubes and be boxed up about 4' above floors; to keep clear of stock and prevent damage to them. Refuse chutes should be of brick or heavy galvanized iron with iron covers or doors.

## Hazards

**HEATING.** Stove not approved. If used, floor for 3" front and around should be protected; a heavy iron fence 4' high and about 3' distant should enclose. Pipe to chimney should not be over 15' long and should be riveted, and not be within 2' of wood.

**STEAM PIPES** should be on iron overhead; exhaust steam should be used; one foot of 1/4" pipe should be used in a well-built enclosed mill for each 70 cubic feet of space to be heated. If mill is more open or colder, use more pipe. Supply pipe from engine and boiler to radiating coils should be covered completely (straight pipes, valves, joints, elbows, etc.) with magnesia, asbestos air cell, imperial asbestos or other efficient and safe covering.

**HOT AIR** from steam coil and fan—steam coil and fan should be located in a clean place, outside of mill, and should draw only clean air and air free from sparks from stack.

**STEAM COILS** should be enclosed in an iron case with side or top of casing removable so that piping can be easily and thoroughly cleaned, and fan should be behind the coil and suck air through the coils rather than be in front and blow the air through, and coil and fan should have a brick or cement foundation, and floor around them be brick or cement.

**LIGHTING.** Don't use gasoline pressure feed lamps, considered exceedingly dangerous, both to life and property. Gravity feed, stationary lamps are as safe as any gasoline lamp can be. Any gasoline lamp increases the insurance rate and special permit must be attached to the insurance policy if gasoline is used or kept on the premises.

Kerosene lamps with glass oil holders are dangerous and will increase the insurance rate, as will open kerosene teakettle or dangle torches.

Gas jets should be immovable, or so arranged that they cannot swing too near or under combustible material. Should be a valve outside with necessary wrench with which to shut off gas entirely from mill in case of emergency, and when it is not in use to avoid paying for leakage.

When electric lighting is installed dynamos should be in a clean brick room or building with a cement floor and ample space above and around it. The "switchboard" should be slate; rheostat should be iron cased; all wires should have a "weatherproof" or "waterproof" insulation, not the old "Underwriters'." Weatherproof wire has one or two woven covers saturated with a black sticky compound. Waterproof wire has a rubber cover inside of a woven cover. The old "Underwriters'" wire has a woven cover saturated with a white (looks like dry white lead) powder; (any white covered wire, about 1/4" thick, is certainly "Underwriters'" wire). All wires should be clear of all wood

and combustible material; running on porcelain supports, not over 4 1/2' apart lengthwise of wire and wires not nearer each other than 2 1/2" except at cutout, etc. All joints should be soldered and taped. Wherever one of the two wires that extend around the mill parallel to each other or one of its branches crosses the other or one of the branches of the other, the wires should be separated by porcelain tubes, taped in position. Where wires enter buildings, there should be a loop down just before wire enters so that moisture and rain will not follow down the side (in or out) of the building from the wire. Where wires pass through partition beams or any combustible material they should be surrounded with porcelain tubes, taped in position. Where passing through floors, wires should be guarded by a box to prevent damage. Wires and cords should be kept clear of iron and combustible material, especially of steam, gas and water pipes. Keep lamps clear of combustible material. Don't make shades for lamps by tying paper of any kind to or around them. All cords should be cable or armoured, i. e., covered with an especially heavy insulation. Cutouts should be porcelain (as should rosettes, etc.) and be of the plug or tube pattern. Cutouts and instruments controlling lights in each room should be grouped at entrance and be enclosed at a readily reached height in an asbestos lined box. If there is a stair tower, these boxes should be located in this stair tower. Cutouts and switches should not be in varnish rooms and lamps over varnish dipping tanks should be of the keyless double globe pattern guarded by wire cage. Keep current cut off from parts not in use, while they are not in use, and if electric current is obtained from the public service keep the current cutout at entrance except when it is in use.

**ARC ELECTRICITY.** Some remarks as to incandescent electricity, as far as they apply; only the kind of arc light in which the arc is enclosed in a tight fitting globe should be used. Lights should be supported independently of the feed wires, and each light have its own switch.

**DON'T USE GAS AND ELECTRICITY IN THE SAME BUILDING.** Electric wires in contact with gas-pipes have caused many disastrous fires. A workman is liable to make such contact at any time, if both gas and electricity are used. Electrical rules free, on application.

**REFUSE.** Suitably constructed refuse burners or waste vaults should be installed in connection with blower conveyor.

**VARNISHING,** painting, etc., should be preferably done in a separate building; dipping tanks should have self-closing tin-lined covers and vent pipes at top leading to sewer on outside. If gasoline, benzine, naphtha, or any of the products of petroleum of greater inflammability than kerosene oil of the U. S. Standard is kept or used on the premises, a permit should be attached to the insurance policies.

**OILS.** Lubricating oils, except the supply distributed in small cans around the mill, should be kept outside of mill and away from main valves.

**COTTON WIPING WASTE.** One raised self-closing riveted metal waste can should be provided for each 2,500 square feet of floor surface in the manufacturing and varnishing department; also one in engine room.

**SHAFTING** should be overhead or in a space 9' high in the clear. Drip cups should be provided where oil escapes and would drop on floor or work. These drip cups should be emptied at regular intervals and oil filtered and used again. The use of mineral grease in compression cups is well spoken of by users as preventing hot boxes.

**GLUE.** Heat by steam. The supply pipe should be covered with magnesia, asbestos air coil, imperial asbestos or other safe and efficient covering. If gas heated, the connection should not be by rubber tube but by an iron pipe and care should be used that the flare of the gas under the pot or when blown by the wind cannot ignite anything. The jet and pot should be enclosed in an ample iron box. If by kerosene the heater should be enclosed in an ample iron box.

**USE CAUL** or hot box for drying and heating lumber before glueing it together

**EMERY MACHINE** benches should be iron and floor around emery grinders should be iron clad, or all wood exposed to sparks of emery wheels should be iron clad.

**MACHINE SHOPS.** Oily waste cans, drip pans for oils, disposal of iron filings in iron receptacles and where not exposed to water are the points required.

The cupola house of the foundry should be entirely of brick, cement and iron, with ample clearance. Core oven and surroundings should be entirely of brick, cement or iron; roofs should be covered with the best spark-proof material and storage of wooden flasks should not endanger plant.

**FORGE** floor and surroundings should be brick, cement or iron clad and 2" clearance at roof around pipe from hood. The regular smithy forge should be brick with brick hood and chimney. The fan blown enclosed brazing forge should have full 2" clearance around pipe at roof, as this pipe gets much hotter than the pipe of an open forge, and has charred and set fire to the wood of roof close to it. Forge should be located in a separate room.

**DRYING** is one of the chief hazards of the woodworker. Therefore cut it off absolutely hollow space, 4" plank "slow burning" construction or entirely of brick, cement, iron or terra cotta. Walls should be standard, stone, cement or brick, parapet at sides and up to the tracks in front and rear, and if ends expose mill they should be protected by fire doors. This can be done by enclosing transfer platforms by brick walls and having fire doors at sides, the regular canvas door being used at front of kiln proper.

**STEAM PIPE KILNS.** There should be no wood of any kind below the wheels of the cars or below the rack on which stock is piled; steam pipes should be 24" to 36" above ground and be entirely upon iron or brick. Kiln should be equipped with automatic steam sprinklers 10' apart below roof on same piping as the drying system and also with a hand operated steam jet.

**HOT AIR DRY KILNS.** Both kiln and hot blast room should be cut off from mill by fire walls and fire doors. Hot blast should be arranged with the same care as for heating mill. Automatic steam sprinklers should be placed every 10' in top of kilns and in coil box between fan and coil and in fan room, and hand operated steam jets should be provided.

**BOILER HOUSE AND SHAVING VAULT** should be stone, cement or brick, standard. Floor should be brick or cement, roof should be 4" plank "slow burning" construction, reinforced concrete or entirely of brick, cement, tile and iron. Walls should be parapet, no matter what the construction of the roof. In

case of fire in a shaving vault with a corrugated iron roof and walls not parapet and adjoining a wooden mill, the heat of a fire in the burning shavings would make the iron of roof hot enough to set fire to the wood of mill against which it would be and in some cases the corrugations of the iron leave a space for flame to enter mill when walls are not parapet. All openings from boiler house and shaving vault should have standard automatic fire doors. There should be automatic steam sprinklers and hand-operated steam jets in the top of shaving vault and of boiler room. An all iron roof is a poor roof to work under—hot in summer; cold in winter; moisture condenses on it and drops from it; 1/4" asbestos boards have been used under the iron of the roof to prevent these defects. The latest and best thing in the shape of a roof for boiler and shaving vault or kiln is the fireproof reinforced concrete roof, which is said to cost about 15 cents a square foot. For the South we would advise a boiler house detached 10' with cement floor; brick walls to a height of 3' all around, 10"x10" posts above this to a mill constructed 4" plank roof, or iron posts and reinforced concrete roof, all protected by automatic water sprinklers.

**BOILERS.** Brick set tubular or water tube boilers should be used. Do not use locomotive style boilers. Setting should be 18" thick with air space in center, and be set clear 2' of all wood. There should be 6' or more space above boilers and boilers should be covered with brick and cement so as to make an easily cleaned surface. If mill is a saw mill feed refuse by all iron chutes and all-iron conveyor into a Dutch oven. At a general woodworker feed refuse into boiler directly from cyclone, which should be located directly above boiler front, with an automatic cutout in feed pipe, and a sweep-up pipe at shaving vault door. This is safer, will save about one-third the fuel and the boiler room can be kept clear of refuse. Door from firing room to refuse vault should be at right angles to boiler and not in front, i. e., in line with back draft. Don't use forced draft by fan blowing under boiler or by steam jet under boiler tubes unless boiler firing room is standard, and even then natural draft is preferable. Do not have engine exhaust into the stack. All wood of roof should be cut away from the stack one-half the diameter of the stack. Herewith is a description of a spark chamber for the permanent prevention of sparks from a boiler stack (specification sent free on application). The boiler flue enters horizontally a hollow, brick, stone, cement or iron chamber like unto the base of a brick chimney. This starts from the same level as the boiler and extends 6' above the top of the boiler flue. The interior cross section of the chamber is about four times the cross section of the flue, or in other words the diameter of the flue in feet multiplied by itself and that product multiplied by 3 1/4 should not be less than the product of the width of the interior of the chamber multiplied by the length (not height) of the interior of chamber. If the flue is 2' in diameter the chamber should be 2'x2'x3 1/4', equals 13 square feet, or about 3 3/4' square inside; with a 3' flue, the chamber should be about 5 1/2' square inside, and with a 4' flue the chamber should be 7 1/4' square on the inside. Out of the top of the chamber rises an iron stack, the same size as the flue; at the bottom of the chamber is a small door giving access into the chamber. The larger the chamber, with reference to the size of the flue, the better. This is the only spark preventing arrangement that is permanently efficient and almost the only one that is of the least value. The usual

sieve in top of the stack is useless.

**CARE AND CLEANLINESS.** Institute a system of cleaning up mill floors daily (at small mills the watchman can well do this) and also clean bearings nightly; of having the oiler brush off every bearing of line shafting and of blower daily; of cleaning out pulleys and brushing off beams weekly; of cleaning hot blast fan weekly; of keeping engine room clean all the time; of keeping boiler hearth clean except when actually throwing fuel into the boilers; of cleaning off top of boiler daily and around the plant weekly and keeping roofs clean. Cleanliness is more than equal to godliness in preventing fires.

**GASOLINE EMBOSSEING MACHINE** should be fan feed, by some such system as that put into laundries by the Empire Laundry Machine Company of Boston, Mass., and not pressure feed as generally in use, and a permit should be attached to the insurance policies.

**GASOLINE ENGINE** should have brick or cement floor and foundation. Exhaust should be 1" clear of combustible material, engine should be pump feed; the reservoir being outside 30' distant, and below the level of the engine. Permit should be attached to insurance policies.

"BURNER" or "SLAB PIT" should be at least 200' from the mill and said space should be clear of buildings, refuse, lumber or other things. It should be enclosed on side toward mill by a fireproof obstruction of earth, stone, brick or cement or can be iron skeleton iron-clad, 20' high extending out 25' on east side of the slab conveyor with ends flared 5' toward pit. Conveyor over burner for 10' from burner toward mill should be entirely of iron. Two-inch water pipe should be carried along end of conveyor over the burner, pipe to be perforated or with open sprinkler heads and valve controlling this water system to be located at a convenient and safe place where heat from burner will not prevent operation.

Suggestions for further protection in stand-ard mill are one extinguisher of the turn-over variety, each story—one or two filled casks each story at stairs—one filled fire pail (distributed) for each 500 sq. ft. of working floor surface and to each 1,000 sq. ft. of storage floor surface; sand in half the casks and pails in varnish rooms (the factory mutuals advise for fire pails a solution of chloride of calcium, saying it won't freeze; has no unpleasant odor, won't evaporate, but wooden receptacles must be prepared for it); one 3" vertical pipe at exit with sufficient 1 1/2" hose attached and ready for use to reach with water all parts of interior; steam jet with valve outside and steam sprinklers in each dry room, shaving vault and boiler room.

**ENCLOSURE.** Arrange mill to close up and lock up and enclose the entire property (mill, sheds and yard) with a fence and locked gates, 10' tight board fence is standard for a city; 10' fence of "field fencing" 6" mesh, with two strands of barb wire on top, is acceptable elsewhere.

**WATCHMAN.** Consult authorities of companies insuring risk as to what is an "approved" watchlock. For a while portable watchlocks were not accepted by some of the underwriters' bureaus, and this may be so at the present time. It is well to get the names of approved watchlocks from companies insuring the risk. The electric and magneto systems are, we believe, approved by all insurance companies. Personally we think the magneto system is the best.

## News Miscellany

### Meeting of Lumbermen's Club of Cincinnati

Evidently Joe Bolser, chairman of the Entertainment Committee of the Lumbermen's Club of Cincinnati, believes that the way to the heart is through the stomach, and carries his doctrine into practical life by always providing an excellent dinner as the attraction to bring a goodly number to the meetings. At the March meeting on March 8 at the Gibson House, a beefsteak dinner was provided, with good old Cincinnati lager as a side issue. While the palate was being tickled with the viands the ear was delighted with melodious strains from the celebrated Pork Chops Band. Coffee and cigars being passed, President Cliff S. Walker drew forth from his pocket, not the familiar old jack-knife, but his brand new gavel and rapping for silence, said: "Gentlemen, you have the privilege of opening business or listening once more to the melodious strains of 'Rings on My Fingers, Bells on My Toes.'"

The song was unanimously decided upon.

President Walker then called the meeting to order and asked the secretary to read the minutes of the last meeting.

The minutes were approved as read.

Under the constitution the naming of nominating committees to arrange tickets for the annual election in May is in order. For the regular ticket the chair will name A. B. Jackson, George Morgan and Sam Richie. The independent committee named from the floor was George Littleford, Chas. F. Shiels and B. A. Kipp.

The special order of business is on the report of the Committee on Advertising.

Mr. McCracken, chairman of the committee, stated that the discussion was held over from the last meeting. The matter of advertising the city as a hardwood market by the club had often been discussed, but no definite action has been taken. We should do something, either as a club or as individuals. I am in favor of the club advertising. We ought to spend something. Other cities are in the field claiming to be the greatest hardwood market, and we should be recognized. It is now up to the club to say whether we spend money on advertising as a body.

The chair called upon various members to express their views, and opened up a general discussion in which every phase of the situation was touched upon.

Several newspaper representatives were present, and a number of the members took occasion to say that the lumber trade press had always treated Cincinnati fairly, and were of the opinion that all should be treated alike on the advertising problem when it came to a distribution of the loaves and fishes.

As the main topic of discussion was on the hardwood market, some of the members of the club who do not handle hardwoods objected to advertising Cincinnati as a hardwood market, but insisted that it be the "greatest lumber market," owing to the fact that they were selling yellow pine.

After a discussion which lasted over an hour, the whole matter was referred back to the Advertising Committee to report a plan with cost at the April meeting.

The resignations of the Galloway-Pease Company and the Queen City Box Company were presented, and referred to the Executive Committee for action and report.

A letter from the National Wholesale Lumber Dealers' Association extending invitations to their banquet to the president and two members was read. The chair explained that the additional invitation was given to S. Richey and Fred Mowbray. Action was concurred in.

A letter from the Trade Expansion Committee of the Business Men's Club was read, invit-

ing the club to send a committee to confer. The object is to arrange for a large excursion of business men of Cincinnati to visit various cities and "boost" Cincinnati.

Mr. Bolser moved to refer to a special committee of five. Carried.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, who was present, heartily indorsed the movement, being a firm believer in boosting, and relating incidents of his experience in the "boosting" game at other cities where he has been located.

The president appointed on this committee Joseph Bolser, chairman; Lewis Doster, C. M. Clark, Mr. Hollowell and Frank E. Scott.

Lewis Doster was given the privilege of the floor, and said that he was unable to attend the February meeting owing to absence from the city, but that he had been delegated by the Executive Board of the Hardwood Manufacturers' Association of the United States to express to the club their most grateful appreciation of the manner in which they had been entertained by the Lumbermen's Club of Cincinnati on the occasion of their recent annual convention in this city. He said further that on recent trips the praise of the hospitality of the Lumbermen's Club of Cincinnati was on every lip, and the club had reason to be proud of its success. On behalf of his association he extended their most sincere thanks.

He said that the man, who as chairman of the Entertainment Committee, worked night and day and neglected his own business to bring about this magnificent success should not be overlooked and moved that a vote of thanks be extended to Joseph Bolser.

The vote of thanks was unanimous and amounted to an ovation, during which Mr. Bolser was called upon for a speech. He declined, however, by stating that he appreciated their good will, but that he had never made a speech in his life, but was willing at all times to do his share of the work.

E. J. Thoman, manager of the club bowling team, stated that the club possessed a team of bowlers which was the equal of any team of lumbermen bowlers in the country, and were open to challenges to defend their contention. Cincinnati is not alone the greatest hardwood market, but now boasts of possessing the best team of lumbermen bowlers. Let the Cincinnati Lumbermen's Club bowlers hear from the pin knights of other centers.

Chester F. Korn of the Committee on Permanent Quarters, on being called upon by the chair, reported that the committee would be in shape to report something definite at the next meeting. He said that the committee was not asleep on its job, but owing to the absence of the chairman from the city a definite report was not ready.

John Long, of the New York Lumber Trade Journal, was present and was called upon by the chair for a few remarks. He excused himself on the ground that he was not effective as a speechmaker. The meeting then adjourned.

### Large Lumber Companies Merge

The Tug River Lumber Company and the C. L. Ritter Lumber Company have been merged into one company and will hereafter operate under the title of Rock Castle Lumber Company, with headquarters in the Frederick building, Huntington, W. Va. The companies are both well known, and have extensive lumber and timber possessions in Kentucky and Virginia, operating several mills on their several tracts of timber. The entire operations of the company will be controlled from the Huntington office. C. L. Ritter, one of the large stockholders, is a resident of Huntington and has been

very successful in the lumber business for a number of years. The C. L. Ritter Lumber Company was located at Avoca, W. Va., for a number of years and only recently completed cutting its timber at that place, when it moved its mills to newly acquired property. Just recently the company closed a deal for a large boundary of virgin timber on which it will begin operating at once.

### A Dangerous Wood

A suit now pending in the Blackburn county court, England, in which a sawyer sues a firm of shuttle-makers for one hundred pounds damages for injuries sustained while at his work is unusual in the cause of the action.

In recent years the scarcity of Persian boxwood has led manufacturers of shuttles to substitute the African product. Shortly after its introduction a rumor was circulated that investigation had revealed the presence of a certain poison of cardiac nature in this wood.

The plaintiff in this case maintains that the sawdust which he has inhaled has so poisoned his system as to render him incapable of continuing his work. The subject has been a source of general discussion between labor bodies and employers, and the former have forbidden their members to work on the African species more than a certain number of consecutive hours.

### Forest Service Encourages Manufacture of Odd Lengths

The last annual meeting of the National Lumber Manufacturers' Association at Seattle, Wash., in July, recommended that odd lengths be made standard in flooring, ceiling, partition, finish, moulding, drop and bevel siding, and urged its affiliated associations to adopt odd lengths as standard in these forms, several associations responding favorably immediately. The Pacific Coast Lumber Manufacturers' Association immediately adopted the recommendation and began an active campaign for the universal manufacture of odd as well as even lengths in several forms of planing mill products. At the present time practically all of the largest mills operating in the Pacific Northwest have begun to manufacture odd lengths in flooring, ceiling, siding, finish and rustic, and are placing such lengths on the market.

An investigation was made by the United States Forest Service at a number of mills in the states of Oregon and Washington before the manufacture of odd lengths was put into practice. The figures compiled as a result of this investigation were obtained by keeping a record of the amount of clear material of each form which was wasted, because of the custom of manufacturing even lengths only.

In the manufacture of flooring, it was found that the waste amounted to 1.67 per cent of the total amount manufactured; in rustic, 1.66 per cent; in ceiling, 2.81 per cent, and in siding, 2.7 per cent. The average waste in all forms investigated amounted to 2.07 per cent of the material run through the machines. This percentage, while seemingly small, assumes large proportions when it is considered that approximately 750,000,000 feet of lumber is manufactured into planing-mill products annually, in the states of Oregon and Washington, the yearly waste amounting to 15,000,000 feet, an amount equivalent to the annual growth of wood on approximately 30,000 acres of good timberland in that region.

While Pacific Coast manufacturers are doing their best to save this waste the retailer, in certain instances, is strongly opposing the manufacture of odd lengths. It is his contention that the present building practice is founded upon even lengths and that the saving of the manufacturer, by the new practice, is merely transferred as a loss to the consumer,

and that, after all, there is no real gain.

In reply to this it must be said that the number of odd length pieces manufactured forms only from 10 to 50 per cent of the total amount produced; the average number being approximately 20 per cent. In the construction of modern frame buildings, it is customary, especially in that section of the country which is subject to severe weather conditions during the winter season, and generally throughout the country in the construction of first-class residences, to use sub-floors and sheathing, as a nailing base. It is well known, also, that the dimensions of rooms or walls of a building are as likely to be in odd feet as in even feet, and therefore it is reasonably certain that all of the odd-length material which would be manufactured could easily be used, resulting in an ultimate saving, not only to the manufacturer, but also to the consumer.

#### Plan for Correction of National Forest Boundaries Approved

The examination of national forest boundaries carried on by the forest officers last summer and fall, upon the initiative of Secretary Wilson and under his direction, has resulted in new information, which will make it possible to restore to the unreserved public domain much land not best suited to forest purposes. This is to be done under a plan just approved by President Taft.

A definition of the lines along which action should be taken was called for by the fact that reports and maps are now in the possession of the Department of Agriculture which show the character of the lands and the cover along the lines of the national forest boundaries. The purpose of the department in securing this information was to make possible a correction of the boundaries on the principles now approved by the President, for it has never been intended that the national forests should include agricultural land or grazing land not suitable for forest purposes. On the whole the changes which are found to be called for are of relatively minor importance, but in their aggregate they open to settlement a large amount of land.

Some of the land is suitable for dry land agriculture, though the greater part is grazing land. In Idaho, which has a large national forest area, about 470,000 acres will be eliminated, of which 34 per cent is tillable. Eliminations in similar proportion will be made in a number of the other western states which have large amounts of land in national forests.

#### Building Operations in February

Official reports from forty-three building centers throughout the country, as compiled by The American Contractor, Chicago, show an aggregate loss of 23 per cent as compared with February, 1909. According to predictions made throughout the latter part of last year, by the industrial and financial press, the year 1910 was set down as a coming record-breaker, which forecast, however, has failed to materialize in

building operations. Of the forty-three cities, sixteen show a loss of from 4 to 79 per cent and twenty-seven show a gain of from 2 to 679 per cent. Cities presenting a gain of 50 per cent or more are: Birmingham, 66; Grand Rapids, 55; Hartford, 112; Louisville, 217; Los Angeles, 160; Manchester, 679; Minneapolis, 61; New Haven, 52; Salt Lake City, 65. Particulars are shown in the following table:

City	February, 1910. Cost.	February, 1909. Cost.	Per Cent Gain, Loss.
Atlanta	\$ 338,069	\$ 506,784	21
Baltimore	427,356	392,101	9
Birmingham	274,867	165,240	66

#### A Self-Feed Rip and Edger

A brand new machine is being manufactured by the J. A. Fay & Egan Company known as No. 245 Self-Feed Rip and Edging Saw.

This is a strictly high-class tool for sash, door and blind and other planing mill work.

It is designed to meet a wide range of requirements for general ripping or edging both long and short stock. It combines the advantages of quick adjustment with an edging carriage, producing a perfectly straight edge as well as parallel work. It possesses another advantage, viz., that the section of the carriage track at the right of the machine proper may be removed, converting the machine into a regular self-feed rip saw.

It will rip 17 inches wide between saw and fence and up to 4 inches thick.

The main frame is cast in one piece, is heavily ribbed and carries the bearings for the countershaft, making the machine entirely self-contained.

The table is made of glued-up strips of hard wood and is provided at the front end with

slide and index plate for rip fence, having self-locking eccentric clamp lever.

The saw mandrel is carried on a swinging frame and provided with a gravity belt tightener to keep belt at a proper tension. The mandrel bearing is provided with adjustment for aligning and is raised and lowered by means of a hand wheel either at the front or the side of the machine convenient to the operator, when working either as a rip saw or an edger. The mandrel is fitted with the company's expansion bush for saws with different size holes.

The feed works, consisting of both power driven feed-in and feed-out rolls, is carried on a swinging frame which may be instantly raised or lowered by means of a lever, either at the right of the main frame or in front of the edging carriage.

The edging carriage is mounted on rollers and travels on planed tracks, one side being "V," insuring absolutely perfect edging on material full lengths of carriage. When so ordered it is furnished with power rope drive with return of carriage at three times the speed of feed.

Further particulars concerning this machine may be had by writing the manufacturers, J. A. Fay & Egan Company, at 414-434 West Front street, Cincinnati, O., who make a standard line of woodworking machinery.

#### Proper Car Equipment for Lumber Transportation

Leonard Bronson, manager of the National Lumber Manufacturers' Association, recently sent the following letter to the Hon. James R. Mann of the House Committee on Interstate Commerce, in connection with the question of the suitable equipment of rolling stock to carry lumber shipments:

The lumbermen do not feel that they are selfish in asking that when amendment of the interstate commerce law is reported it be so worded as to require complete equipment of flat or gondola cars for the carriage of their products, because, as they believe, every other commodity of anything like equal importance with theirs from the transportation standpoint is given equipment especially designed to its needs.

As I stated during the hearing, I am not a lawyer, and so may make suggestions that are not entirely apropos nor readily put into words, but it seems to me that a fair and comprehensive inclusion of this matter in the law might be accomplished in substantially the following way:

In section 1 of the act as it stands today, in the second paragraph, is a definition of the term, "transportation," reading: "the term 'transportation' shall include cars and all other vehicles and all instrumentalities of shipment or carriage" etc. If you should insert after the word, "cars," or after the word, "vehicles," the words, "completely equipped for the safe carriage and protection of all commodities ordinarily transported in carload lots," it would, I think, substantially cover the point at issue and be fair to all classes of shippers. The exact wording to cover the purpose and thought I have is very gladly left to you.

You are aware of our feeling that the railroads can well afford to furnish car stakes, binders, etc., in view of the fact that by their use they are able to transport a larger load on a cheaper car where a box car is used.

It would seem to the layman, in view of the verbiage that follows the part I quoted above, that this broadening of the definition of the term, "transportation," should be unnecessary. Seemingly, it would be covered by the words, "all services in connection with the receipt, delivery," etc., yet the Interstate Commerce Commission has not seen fit so to interpret these words or to apply such an interpretation, and, therefore, I believe it is necessary that his interpretation, if it be sound, be written into the law.

I do not know whether such an addition as I suggest should absolutely require the railroads to furnish the equipment or whether they could simply pay for the equipment if furnished by someone else. The latter, if permitted, would undoubtedly be the way in which the matter would be handled at first, though I am sure that after the railroads had equipped a few hundred thousand flat and gondola cars with temporary stakes and binders they would soon devise some permanent arrangement, and be glad to do so; but perhaps it would be necessary to cover this point in the law, perhaps in the sections defining the duties of the Interstate Commerce Commission. If the railroads have the option of furnishing the equipment or paying for it, and choose the latter, the charge allowed should be absolutely fixed by the Interstate Commerce Com-

FAY & EGAN NO. 245 SELF-FEED RIP AND EDGING SAW

mission, either by an allowance in the rate a lumberman receives or by a fixed allowance on each carload. Some lumbermen think that reduction of 1 to 1 1/2 cents a hundred pounds in the rate on lumber shipped on open cars would be a satisfactory way of settling the matter. I do not agree with that view, but am willing to leave it to the wisdom of the Interstate Commerce Commission! the only point on which I am insistent being that the rate or allowance, or whatever it may be called, be fixed and published by the Interstate Commerce Commission as its investigations may determine to be just.

If you can again call this matter to the attention of the committee and secure the incorporation of this idea in the committee's reported bill you will be doing a service to several of the leading industries of the country, and at the same time, I believe, be doing no injustice to the railroads, but simply be placing upon them a duty which is properly theirs. The exact wording and form of the amendment desired I am glad to leave to the wisdom of yourself and the other gentlemen of the committee.

Mattison Turning Machines

In contemplating the infinite variety of turned articles in common use there comes to the mind of the thinking person the wonderful machines which produce these turnings, of necessity rapidly, accurately and at small cost. But few people, even among the woodworking trade, have any idea of the accomplishments of the modern turning machine. That it might produce numerous turnings of the same type but varying patterns is not surprising, but that it should be capable of making turnings of many different shapes and a great variety of patterns is remarkable.

The C. Mattison Machine Works, turning machinery specialists of Beloit, Wis., produce a line of tools of this type that have a wider range of variety turning than perhaps any other machines on the market.

One of the features that has made the Mattison machines so successful is the patented cutter-head of a design used exclusively on these tools. Knowing the kind of work produced by the hand turner with his chisel, the same principle has been applied to these machines, the knives operating and cutting in exactly the same manner that the hand turner applies his chisel in cutting across the grain of the wood. For instance, in forming a bead, or other orna-

mental member, the turner always starts his cut at the highest point, and shears down, first to the right and then to the left. In this way he is cutting just as much with the grain as against it, and the result is an easy cut and a smooth one. The Mattison cutter-head acts on identically the same principle—the knives are all made in pairs, right and left, and stand at an angle so that one shears one way and its mate the other, always downward and with the grain of the wood.

The Mattison people have studied turning machinery thoroughly and have learned the weaknesses and difficulties encountered in most tools of this sort, with the result that their machines have overcome many of these annoying features. For instance, there is no getting around the fact that where centers are used to hold long, slim stock, it is impossible to prevent springing and vibration, no matter what style of cutter-head is used. This is due mainly to the end pressure exerted by the centers, and when the stock is turned down so slim that it becomes weak this pressure has a tendency to spring it into the knives. To overcome this the Mattison people have provided a work-holding device for use on slim turnings, which consists of a pair of hollow chucks that grip the stock at each end, close up to the cut, holding it firmly and without end pressure.

Now that turnings are again going to be used extensively on good furniture, it is quite a serious proposition for the average manufacturer to provide a practical and economical way of making the turnings. Ordinary round turnings can of course be gotten out by a hand turner, but when it comes to square and octagon turnings that are coming into general use, it is an absolute necessity to have some practical machine for the work, not only on account of the prohibitive cost of making square and octagon work by hand, but the difficulty of doing it smoothly and true to patterns.

The Mattison machine will handle all this work, either round, square, octagon or any other polygonal shape. It will handle any of the delicate patterns that can be made by hand, do the work as well or better, and every piece comes out exactly alike in size and shape. It requires

only one size machine for all kinds of work, as it handles anything from a small spindle to a table pedestal or bed post.

For handling Flanders style of turnings, which are now so popular, it is also very valuable. It will put a turning on a back post after it is bent, doing away with the necessity of doweling or splicing. Turned parts can also be built out and made larger than the square portions.

Further details in regard to these interesting machines, together with profusely illustrated and clearly written descriptive matter, can be had by those interested by writing to the C. Mattison Machine Works at Beloit, Wis.

Factory Waste

In drying lumber the factory waste will average thirty to thirty-five per cent. This is admitted by careful manufacturers who know. This waste is produced all the way from the yard to finished wood work, in about this order: If lumber is not properly piled on the yard to air-dry, overhanging boards will check, twist and bend down by the weight; they become weathered, and these projecting ends are practically worthless. Stickers are not put over each other and not put in thick enough, and no attention is paid to uniformity of thickness; hence, the lumber is kinked, which necessitates cutting out; the proper pitch of piles is lacking, and this causes the lumber to stain. When put in the kilns the same slipshod methods are pursued, and a woe-ful lack of knowledge of proper means of drying is universal. The lumber is baked dry, causing it to twist and warp, check and honeycomb. Some of it is overdried and some is underdried, even in the same car, and when this much-abused lumber reaches the saw it is literally cut all to pieces to remove the defects that have been largely produced by carelessness. Now, twenty-five per cent of the above average waste can be saved by yarding, sticking and drying this lumber properly. This twenty-five per cent on \$20 lumber equals \$5 for 1,000 feet. If a manufacturer cuts 10,000 feet a day, it is \$50 a day, or a saving of \$15,000 a year of 300 working days—rather a tidy sum to be thrown away in useless waste. The Grand Rapids Veneer Works believes that with its new vapor system of drying manufacturers can save this twenty-five per cent.

Atkins Pioneers Get Together

The policy of reciprocity between employers and employes is yearly gaining ground in all lines of business. Instances are noted almost daily, where industrial leaders have become convinced of the folly of maintaining an unsurmountable barrier between themselves and those under them, and by exhibiting an interest in their help, personally and as a body, show themselves good business men as well as beneficiaries of mankind.

In no instance have attempts of this nature, to get together with the laboring element, failed to produce gratifying results from a business as well as from a humanitarian point of view.

A recent event in Indianapolis brings the idea more forcibly home to the lumber trade. On the evening of January 25 one hundred and twelve members of the so-called "Atkins Pioneers" met for their third annual banquet in the Spencer House in that city. Incidentally it may be said that this hostelry is the property of members of this vast concern. The Pioneers are composed of all employes who have been with the Atkins concern for twenty years or more, new members being admitted as eligible. A roster of the membership will be exhibited with pride by the Atkins people. Few concerns can show a better record of faithful employees.

The affair was a source of gratification to everybody and embodied many features indicative of the general hearty spirit of good fellowship that prevailed. I. H. Wilde, for thirty years foreman of the band saw department and now retired with a life pension, was toastmaster and

SAMPLES OF WORK DONE ON MATTISON MACHINES

called on representatives of the various departments, who responded to the following toasts: "The Pioneers," J. T. Dowling; "This Office End," N. A. Gladding; "The Second-Story Back," William Brennan; "The Alley View," Albert Meredith; "Over the Board," Frank Wells; "Eddy Street Gang," Frank Kingsley; "The Outlook," H. C. Atkins.

Of particular interest were the greetings from Mrs. E. C. Atkins, presented by N. A. Gladding and received with a rising vote of respect; and the invitation of H. C. Atkins, who requested the presence of the Pioneers as a body as his guests at a picnic to be given next summer on his country estate.

This most pleasurable and beneficial evening closed with the reading of a toast to the Pioneers, put in verse by a daughter of one of the old members.

### Big Foreign Shipments

A shipment of shafting, safety collars, couplings, bearings, pulleys, hangers, pillow-blocks, etc., are in readiness at the factory of the Dodge Manufacturing Company for a long journey to Valparaiso, Chili. The goods are crated and weigh about 100,000 pounds. The customer is the Braden Copper Company, and the material will be used in a new mill under course of construction in Chili.

A short time ago the Dodge people shipped eleven carloads of heavy power transmission machinery to Moji, Japan, for use in the Imperial Steel Works, owned and operated by the Japanese government. The total weight of this was 343,000 pounds. As individual items there were several heavy belt wheels, including one 264 inches (22 feet) in diameter with 72-inch face, bored 25 inches to fit the main engine shaft.

From time to time, other shipments have gone to Bombay and Buenos Ayres, Cape Town and Christiana, Copenhagen and Calcutta, Kobo and Caracas, London and Lima, Mexico City and Montevideo, Moscow and Melbourne, Sydney and Singapore, Vienna and Valparaiso and other cities.

Export business is today a big item with the Dodge Manufacturing Company.

### Tree Trading Offers Advantages

German nurserymen have come to recognize the value of larch seeds from Montana, and have placed extensive orders in that state. In return the town of Guelph, Ont., has ordered from the German trade sufficient white pine seedlings to plant a hundred and sixty-eight acre tract belonging to that municipality.

It has been recognized in Germany for some time that the conditions of their forests could best be improved by introducing valuable species from other countries, though it has always been a common understanding that trees would flourish much better on their native soil than any other habitation. As an instance of the wisdom of the new order of things the successful transportation of Norway spruce, Austrian and Scotch pine from across the ocean and their successful planting in this country might be cited. Several American species, among which are Douglas fir, black walnut and some of the other large western firs, have been extensively planted in Europe and show a flourishing growth, with good prospects for future returns. In the West the eucalyptus, an inhabitant of Australia, is an example of successful naturalization.

Years ago the common American white pine was taken from this country to Europe, where it has attained such vast commercial importance and been planted in such numbers that the German nurserymen often are able to deliver seedlings in this country at a lower rate than they can be secured on this side of the water. The same course of events will probably result from the introduction of western larch in the foreign market. In requesting shipments of the seeds of this tree the Germans instruct that only the

choicest and healthiest seeds be collected when ripe this fall. An enterprising nurseryman in the Flat Head Lake region has made a proposition to the foreign buyers in which he proposes that they exchange seeds of some of the desirable German shrubs for the larch seed which he will furnish, he believing that he can create a considerable market for the German species in this country.

According to reports from Guelph the planting which they contemplate will serve the purpose of protecting the town's water supply by suitable forest cover over the springs from which the supply is drawn. Besides, the trees will serve the purpose of a public park and in the future will serve as a source of revenue to be derived by cutting firewood. Abroad, the municipalities and state governments largely own the forested areas, a scheme which not only puts the community on a self-sustaining basis but insures a permanent timber supply. Planting in this country other than for purely decorative purposes has scarcely been thought of until recent years, and any indications that such plantations are being carried on to a more extensive scale will undoubtedly be welcome to advocates of conservation.

### Miscellaneous Notes

The Coss Hardwood Lumber Company, Lima, O., was recently organized by F. B. Coss with a capital stock of \$5,000.

A new concern to enter the lumber manufacturing business at Mobile, Ala., is the Mobile Column Company. The capital stock is \$20,000, fully paid. Among those interested are R. R. MacGregor, F. A. Handley and I. J. MacGregor.

The Falls County Lumber Company, Lott, Tex., was recently incorporated with a capital stock of \$20,000 by J. T. Davis, W. I. McReynolds and J. L. Mankham.

The Chesapeake Lumber Company is a new concern at Charleston, W. Va., to own standing timber, manufacture lumber and operate saw and planing mills. It is capitalized at \$10,000. The incorporators are Harrison B. Smith, R. M. Price, I. L. Jewell, C. Q. McFarland and E. W. Adams, all of Charleston.

The F. S. Crannell Lumber Company was recently incorporated at Albany, N. Y., with a capital stock of \$80,000. The directors are Francis F. and Charles R. Crannell of Albany.

The Hagerstown Spoke & Bending Works, which has done a large business at Hagerstown, Md., for several years, has gone into

bankruptcy. The trustee states that the claims will all be paid and the stockholders will get 30 cents on the dollar for their stock.

Articles of incorporation were recently filed by the Spokane Hardwood Floor Company of Spokane, Wash. The company is organized by Cesar and Herman Schneider and Joseph Schisel.

The Brittingham & Young Company recently sold its business at Gray Mills, Wis., to the Nuzum-Hunter Lumber Company.

The Alexander Box Manufacturing Company has been incorporated at Indianapolis, Ind., with an authorized capital stock of \$10,000.

The Clinton Wagon Stock Company, capitalized at \$25,000, is a new concern for Clinton, Mo.

The St. Louis Basket & Box Company of St. Louis, Mo., has recently increased its capital stock to \$500,000.

The Valliant Shingle & Handle Company of Valliant, Okla., was recently incorporated with a capital stock of \$12,000.

The Kauffman Buggy Company at Miamisburg, O., is succeeded by the Kaufman Vehicle Manufacturing Company.

A new concern to enter the handle business is the Montpelier Handle Company of Montpelier, Ind., capitalized at \$10,000.

It was recently announced that the Sikes Chair Company of Buffalo, N. Y., which at present has a large plant in Clinton street, will build a large six-story manufacturing plant on Spring street, just above Clinton street. About \$60,000 will be expended in the new structure.

The Northwestern Lumbering & Cooperage Company of Gladstone, Mich., is planning to build one of the largest hardwood flooring mills in the country. It will be 100 by 350 feet in dimensions and will be started in the spring. It is expected that a large number of men will be employed. The opening of the new plant will prove a big boom to Gladstone.

Fire of unknown origin recently totally destroyed the factory of the Portland Manufacturing Company of Saint John, Ore. The steamer Sacaajawea, which was moored at the dock alongside the building, was also destroyed. The loss is estimated at from \$50,000 to \$100,000. Amount of insurance carried is unknown.

The Gulf City Hardwood Company of Mobile, Ala., recently increased its capital stock from \$5,000 to \$20,000.

Articles of incorporation were recently filed by the Little Rock Axe Handle Company of Little Rock, Ark. The capital stock is placed at \$50,000.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

Leslie C. Stevens, secretary and general manager of the Haynes Bros. Company of Cadillac, Mich., well-known retail and planing mill institution, died on Tuesday, March 8. Rheumatism of the heart was the immediate cause of Mr. Stevens' death. He was an old-time employee of the Cummer Lumber Company of Jacksonville, Fla., and eventually became secretary and general manager of the Haynes Brothers Company of Cadillac. He was a very forceful and successful business man and had many friends throughout Michigan.

The Record was honored with a call on March 8 from A. J. Auger of Auger & Son, the well-known lumber and pulpwood house of Quebec, Canada. Mr. Auger was accompanied by the Record's old friend, Owen M. Bruner of the Owen M. Bruner Company of Philadelphia. These gentlemen are making a little business and social trip through this part of the country.

J. D. Bolton, sales manager of the Hayden & Westcott Lumber Company, Railway Exchange, Chicago, returned on Saturday from a month's business trip in the South and East. Mr. Bolton is very optimistic over immediate business prospects.

E. D. Galloway, president of the Galloway-Pease Company, now located at Saginaw, Mich., was a Record caller on March 8. Mr. Galloway states that George L. Humphrey, the secretary of the company, who has never been active in the enterprise, is now about to interest himself in the sales end of the business. Mr. Galloway expects to spend a large portion of his time at headquarters at Johnson City, Tenn., taking care of the company's four saw mills near that point, while Max L. Pease, vice-president of the company, will have charge of the Poplar Bluff, Mo., mill of the company. Mr. Galloway regards the removal of his headquarters to Saginaw as a very desirable one.

The Record's old friend, Frank T. Sullivan, is now making his headquarters at Buffalo, N.

and is actively interested in the sales department of Hamilton H. Salmon & Co., the well-known hardwood operators of 88 Wall Street, New York City.

E. Fisher, proprietor of the Fisher Machine Works of 1841 Carroll Avenue, Chicago, well-known woodworking machinery producers, is home from an extended trip, where he has been "doing" lumber and box-making association carnivals.

A caller on March 4 at the RECORD office was E. W. Ackles, secretary of the Alton Lumber Company, manufacturer and wholesale dealer in poplar, oak, ash and other hardwoods at Buckhannon, W. Va., who was making one of his quarterly visits to the trade in this vicinity.

Announcement is made of the recent marriage of Ralph W. Bower, junior member of W. H. Bower & Co., to Miss Sallie B. Abitt, Lodinburg, Ky. Mr. Bower is a nephew of W. H. Bower, who is prominent in the lumber trade of Kurtz, Ind., and is well known among the hardwood trade as a capable and efficient lumberman. The bride is a member of one of the old families of Breckenridge county. The marriage was celebrated at the residence of the bride near Lodinburg at half past three on the afternoon of February 23. The lumber trade will unite in commendation of the mutual good choice of the bride and groom.

J. P. Konzen of the McParland & Konzen Lumber Company, has returned from an extended trip in search of wagon stock. Mr. Konzen does not report any serious scarcity of material of this kind, but at the same time he could not fill all his bills to his entire satisfaction. The prices encountered were about the same as had prevailed for some time, showing a tendency to strengthen rather than to decline.

A recent transaction involving a small order of 28-inch panel poplar sets a new mark in value for this stock. A big jobbing house in this city was in immediate need of a limited amount, and on finally locating what they wanted had to pay \$200 a thousand for it.

John —, salesman for the — Lumber Company of this city, recently lost what proved to be a highly desirable order through the magnifying power of his tongue. Mr. — is one of a council of three, the other two being a customer of his and an outsider. He had been confidentially telling of some recent sales placed in what had always been considered impossible territory, and when he was through the customer pulled out a couple of closely written sheets and said, "John, I brought a pretty fair order over today with the intention of letting you take it to your office. After hearing you talk I have come to the conclusion that you are already doing too much business, so I am going to give this to one of those fellows who has been calling right along but never landed anything." He did what he said.

The Lucas E. Moore Stave Company of New Orleans, La., advises that on March 1 it moved its offices to the Weis Building, 826 Common Street, that city.

The Palmer & Seamans Lumber Company, manufacturer and wholesaler of lumber with home office at Uniontown, Pa., will open its sales department at rooms 1419 and 1420 Oliver Building, Pittsburg, Pa., March 14. I. F. Balsley is the efficient manager of sales for this company.

Another change in address is that of the Belgium importer of American hardwoods and softwoods, Auguste Brants, who on February 15 moved his main office to 3, Rue Anneessens, Antwerp, Belgium. His branch office will remain at same address as heretofore, viz: 24 Gelbelstrasse, Altona, Hamburg, Germany. Mr. Brants imports oak, walnut, red and sap gum, white wood, cottonwood, etc., in logs and lumber.

The Forbes-Everts Lumber Company, wholesaler and manufacturer of hardwood lumber, car oak, cross ties and wagon stock, has closed

its office at Van Buren, Mo. Hereafter all correspondence should be directed to the company's home office at St. Paul, Minn.

The Western Cigar Box Manufacturers' Association held its quarterly meeting in the south parlor of the Auditorium Hotel, Chicago, on February 15 and 16, and was well attended. Two features of special interest were the discussion of cost and a talk on the general situation of the cigar box industry by E. H. Defebaugh. After the meeting, the evening of February 15 was delightfully spent in seeing the performance of "The Girl in the Taxi," at the Cort Theater.

W. H. White of the W. H. White Company, Boyne City, Mich., accompanied by his wife, was in Chicago a few days ago en route south. On this trip they were accompanied by Mr. and Mrs. W. O. King, of Chicago. Their first stop after leaving here will be Hot Springs, Ark. Messrs. White and King figure that a month or so a year is well spent in a vacation trip and their wives usually participate in tours of this sort. While on the job at Boyne City, Mr. White indulges in but few periods of recreation, but it is rarely that one does not see Mr. King when at the shooting grounds of the South Shore Country Club on a Saturday afternoon, making scores with a gun that make every other member of the club do some good shooting in order to keep in his class.

Sam Burkholder of Crawfordsville, Ind., one of the pioneers of the trade, and one of the most progressive men of that state, was in Chicago a few days ago and when asked about timber in Indiana stated that there was still some left, but prices had got so high that he was looking over some timber in one of the neighboring states in order to keep his son and partner, Roy, busy in the business.

Dreyfus & Mayer-Dinkel of Mannheim, Germany, advise the RECORD that on February 16 this company had the pleasure of entertaining Dr. Schenck and his students of the Baltimore Forest School at the firm's mills and yards at Mannheim, and afterward a tour of inspection was made of the famous harbor facilities of that port.

Oliver O. Agler of Upham & Agler of this city, and president of the National Hardwood Lumber Association, accompanied by Secretary Frank F. Fish, of the association, attended the recent banquet of the Memphis lumbermen, and report having had a splendid time.

Jesse Schertz of P. Schertz & Co., Gibson City, Ill., was in the city Monday of this week and visited among his friends in the lumber district.

The Sargent Lumber Company, which has had offices in the Metropolitan Block, this city, for nearly twenty-five years, has been forced to seek larger quarters on account of increasing business, and after March 1 will be found in the Great Northern office building. Edward Browne is the general manager of the company.

The directors of the Chicago Wholesale Lumber Dealers' Association held a meeting on the 23rd at the Union League Club, all but E. A. Thornton being present. Matters of strictly association routine were discussed.

George J. Pope, vice-president of the D. S. Pate Lumber Company, whose offices are in the Fisher Building, is in the South.

## NEW YORK

Simon Herrnstadt, who for many years past has been conducting a wholesale hardwood business at 66 Broad street, Manhattan, as sales representative for numerous concerns, filed a petition in bankruptcy in this city February 24 with liabilities of \$78,361, and no assets.

W. W. Dempsey, prominent hardwood and spruce manufacturer of Johnstown, Pa., and local office at 118 Broadway, has recently purchased a controlling interest in the Pervis Plan-

ing Mill Company, Butler, Pa., which will give him added facilities in that line in the conduct of his business.

Gouverneur E. Smith & Co., well-known wholesale hardwood house of 17 Battery place, have just made another very satisfactory mill connection with the Craggy Lumber Company, large hardwood lumber producers of Swannanoa, N. C., to handle their entire output of oak, ash, poplar, etc., running about 5,000,000 feet a year, in the Metropolitan district and vicinity.

E. Hendrickson, who for many years has been associated with H. J. Dykeman, large Brooklyn hardwood and box house, severed his connection therewith to engage in business on his own account at 306 Carroll street, Brooklyn.

Waldron Williams of I. T. Williams & Son, the large Eleventh avenue hardwood house, sailed on February 26 for Bermuda for a little vacation. He was accompanied by Mrs. Williams. Before leaving, Mr. Williams, who is president of the Lumbermen's Club of New York, held a meeting of the Governing Board at which time March 19 was decided upon as the date for holding the annual meeting. A large attendance is anticipated at this time.

The Webster Lumber Company, manufacturers of northern and southern hardwoods, Swanton, Vt., closed out its New York sales office at 1 Madison avenue, and has engaged Mr. Hull, formerly with the Atlantic Lumber Company of Boston, for its representative in the Metropolitan district and nearby trade.

E. C. Mershon of W. B. Mershon & Co., well-known manufacturers of band resaws, Saginaw, Mich., spent several days in town during the fortnight prior to sailing for Nassau, Bahama Islands, where he will spend several weeks. He stated that business with his firm was excellent.

W. A. McLean of the Wood-Mosaic Company, New Albany, Ind., was a prominent visitor during the fortnight.

W. H. Martz of the Goodland Cypress Company, New Orleans, La., spent several days at the new office of the company, 115 Broadway, on a general eastern business tour.

Riddick & Co. is the name of a new wholesale house with office at 115 William street, to conduct a wholesale commission business. It is composed of H. A. Riddick and W. A. Coffin, the latter being identified with the Greenfield Box Company of New York and New England.

E. E. Eaton, wholesale hardwoods, 1 Madison avenue, has just returned from a business trip to mill points, where he picked up some very desirable lots of hardwoods for his customers.

Ralph E. Sumner of H. H. Salmon & Co., wholesale hardwoods, 88 Wall street, just returned from a tour of the southern mills in the interest of business. He found conditions, both as regards production and general demand, to be very active with prices high. He stated that this was due to the fact that buyers in the eastern markets have been slow to appreciate the real relation between supply and demand with a result that production is largely going West at good prices. He believes that the opening of spring will see prices on a higher range than ever before. He found very little dry lumber with stocks badly broken and when present production becomes marketable it will only be at much higher prices.

Fire practically completely destroyed the large plant of the New York Veneer Seating Company, Passaic avenue, Jersey City, N. J., on February 27 and was only extinguished by the use of every city apparatus. In addition to the total destruction of the plant, nine carloads of finished material were consumed. The loss will reach \$200,000. The main office of the company is on Canal street, Manhattan, and the company also has branch plants at Newburgh, N. Y., and Sheboygan, Wis.

Among the recent visitors here were E. E. Wheeler, Wheeler Lumber Company, Waterford, Pa.; L. M. Young, L. M. Young Lumber Company, Boston, Mass.; B. B. Burns, Tug River

Lumber Company, Bristol, Tenn.; Hugh McLean, Hugh McLean Lumber Company, Buffalo, N. Y., and F. E. Parker, Mershon-Eddy-Parker Company, Saginaw, Mich.

Manager Sam E. Barr of the Lilly Lumber Company, hardwood manufacturers of Hinton, W. Va., headquarters 1 Madison avenue, New York, reports that Mr. Lilly was recently stricken with appendicitis and operated upon. Late reports state that he is doing nicely.

Judge Hoyt has granted a motion in favor of Silas F. Minter, wholesale lumber dealer of No. 1 Broadway, against whom a petition in bankruptcy was filed on April 15, 1908, confirming the report of John J. Townsend, referee in bankruptcy, overruling specifications of objections to a discharge. His liabilities were \$63,807 and nominal assets \$23,065.

## BUFFALO

The Standard Hardwood Lumber Company is hard at work shipping stock down the Cumberland from its Tennessee mills and will soon be putting some of it in here, for which the late good sales have made room. A big year is apparently under way.

A. Miller is keeping his hardwood stock well filled in, so that there is always something in that customers want, and he is keeping the members of the Hardwood Exchange at work on certain puzzling transportation matters, while general matters are quiet.

F. W. Vetter comes back soon from his southern trip, which was at first taken down the coast as far as North Carolina and finished in the Ohio valley. He has made the year so far quite the best he has had since going into business.

Scatcherd & Son lately sent Manager Hopkins down to Memphis to urge the sawmills on, for the sales are always going far ahead of the stock. Oak is the specialty of the firm and the mills are turning out a good lot of it.

The firm of G. Elias & Bro. is sticking to the Pacific coast for long-length timbers, but is of the opinion that the sawmill prices of western white pine are too high, so the usual purchases of that wood have not been made yet.

F. M. Sullivan lately made a long trip to the eastern market, finding everything promising in every way. The yard sales for the winter have been of the best and a season is opening that is expected to be even better.

Frank A. Beyer has his county treasurer's office in such running order that he can give some attention to his sawmills in Missouri, having made two trips out there lately. The outlook is good.

It looks as if the missionary work so long done in gum lumber by the Buffalo Hardwood Lumber Company was beginning to bear fruit, for the office now reports that gum is one of its best selling woods, with all others doing well. The removal of its veneer mill to the table mill premises at Bladell is about complete and the new machinery will soon be started up.

H. A. Stewart is preparing to take another trip South soon in order to keep up the flow of oak, chestnut and poplar this way, as the sales of these woods is very good, while the cherry and walnut season is not here yet.

It is now the aim of the Hugh McLean Lumber Company to sell its oak and other special stock so that it can be shipped to the customer direct from the mills or yards in the Southwest, not carrying a very heavy stock here.

The public business of C. E. Yeager is just now taking much of his time, as he is chairman of two important committees of the Lumber Exchange and Chamber of Commerce. The lumber business is good for all that and is not neglected.

The annual meeting of the Lumber Exchange takes place on the 12th. G. Elias, who has been president two years, will now retire, no

doubt, as that has always been the rule. The vice-president is Knowlton Mixer, who is in line for the presidency. Business before the exchange has been light for some time.

## PHILADELPHIA

Ralph Souder of Eli B. Hallowell & Co. reports his concern very busy. The continued bad weather has been at times a handicap, but he is sanguine the spring will see a restored activity.

J. Randall Williams of J. Randall Williams & Co. says things are moving along fairly well. He anticipates a stiff advance in trading when more favorable weather sets in.

Joseph P. Dunwoody of Fleck & Dunwoody states that the heavy snows have prevented the prompt filling of orders. Otherwise, matters are not bad. Paul W. Fleck, suffering from an attack of grippe, has been recuperating at the sea shore.

Edgar M. Bechtei of William Whitmer & Sons, Inc., says business would be satisfactory if they could manage to ship the goods, but the recurring snow storms throughout the East have made transportation so expensive, orders are held until the return of better conditions. He looks for an unimpeded trading when spring opens.

William P. Shearer of Samuel H. Shearer & Sons reports a fair influx of business this winter. He looks for activity again as soon as weather conditions are more favorable.

William A. Jackson of Jackson-Wyatt Lumber Company sees good business ahead. The company is going strongly into hardwoods and is preparing accordingly to meet all comers.

Harry S. Field of Justice P. Taylor & Co. is not inclined to find fault with the trend of conditions. Harry Field, as he is known among his friends, is a thorough optimist and an indefatigable hustler. He believes good will come to him who will go after it hard enough, and he substantiates his creed by generally getting what he seeks, in the way of a generous business.

H. Billetter, manager of the Lumber Insurance General Agency and the Co-operative Insurance Agency, is thoroughly established in his new office, 919 Crozer building, where he will be pleased to meet his many friends. He reports business fairly well sustained.

Samuel B. Vrooman of Samuel B. Vrooman & Co. says they have been very busy and that everything is running smoothly. Mr. Vrooman at present is luxuriating at Old Point Comfort, Va.

J. C. Tennant, secretary of the Fenwick Lumber Company, reports business good, considering weather conditions. His company has been handicapped in manufacturing by the heavy storms in the North. Demand continues good and prices are well sustained. Oak is especially in good demand, but orders are being entered only for such stock in oak and other woods as is actually on hand and in shipping condition. Mr. Tennant anticipates a brisk demand and lively market for the balance of the year. He considers the outlook for a good hardwood market excellent.

John W. Coles says inquiries and orders have increased, but the heavy weather in the country districts has defied prompt delivery.

Ben C. Currie of Currie & Campbell reports a comparative slacking up in business during the first part of February, due to adverse weather conditions. However, orders are coming in more freely at present and things are looking proportionately brighter. The firm has moved to 1008 Commonwealth building, where it will have improved facilities for handling increasing business.

The Pennsylvania railroad has placed a large order with the Allis-Chalmers Company for equipment of the new shops at Conway, Pa.

Pennsylvania lumbermen, it is reported, are

migrating to the states in which there are some primeval forests left. B. T. Lynch of Wellsboro, who has taken a big lumber job in North Carolina, shipped his horses and outfit and left the Tioga county seat recently. He was accompanied by twenty-five of the most expert woodsmen in that section.

The Philadelphia & Reading Railway has issued an order reducing the hours of labor in all locomotive and car shops to eight hours a day. This is due to a falling off in the volume of traffic. The order will effect a reduction in shop expenses of about fifteen per cent.

T. DeLong Furniture Company of Topton was recently adjudged an involuntary bankrupt. Samuel E. Bertolet was appointed referee.

P. Erwin Swartley has conveyed to the West Philadelphia Carriage & Wagon Works the four-story factory at the southeast corner of Thirty-seventh and Filbert streets, 44 feet by 40 feet, with an adjoining building on Filbert, 36 feet by 90 feet, for a nominal consideration. The assessed valuation is \$7,000.

Peter C. Arnold, carriage manufacturer of Manheim, Lancaster county, Pennsylvania, died on February 4, aged sixty years.

The Fanning Motor Company, Philadelphia, was incorporated February 18 under Pennsylvania laws, with a capital of \$10,000.

The Wolfe Casket Company, Bangor, Pa., obtained charter under Pennsylvania laws, February 18; capital, \$30,000.

The Georgia Lumber Company, Perth Amboy, was incorporated under New Jersey laws February 18, with a capitalization of \$125,000.

The Newark Motor Car Company is a new concern of Newark, N. J. Its capital stock is \$50,000.

The George Anderson Bamboo & Furniture Novelty Works, Sewell, obtained charter under New Jersey laws February 22. The company is capitalized at \$25,000 and will manufacture furniture novelties.

The Mayo & Volkert Furniture Company, New Brunswick, was incorporated under New Jersey laws February 23; capital stock, \$50,000.

The Southern States Lumber Company, Pittsburgh, obtained a charter under Pennsylvania laws February 25. Its capital stock is \$120,000.

At a meeting of the Philadelphia Wholesale Lumber Dealers' Association, held Thursday evening, February 17, the following resolution was unanimously adopted: "Whereas, The fair development of the foreign commerce from this port, so important as an industrial center, urgently requires the opening of the Delaware river, with a channel of not less than thirty-five feet, as quickly as possible, therefore, be it resolved, that we earnestly petition the United States engineer corps to give earnest consideration to the pressing needs of this port and approve the appeal for a thirty-five-foot channel."

The city of Philadelphia sent to the recent annual of the National Wholesale Lumber Dealers' Association at Cincinnati the strongest delegation of lumbermen sent by any city. They were a jolly bunch and they all report having had a fine time. Those comprising the party were as follows:

George F. Craig of George F. Craig & Co.

A. J. Cadwallader of George F. Craig & Co.

Edward F. Henson of Edward F. Henson & Co.

Charles J. Coppock of Coppock-Warner Lumber Company.

Harry S. Field of Justice P. Taylor & Co.

Justin Peters, manager Pennsylvania Lumbermen's Mutual Fire Insurance Company.

B. Franklin Betts of Charles M. Betts & Co.

Horace G. Hazard of H. G. Hazard & Co.

Frederick S. Underhill of Wistar, Underhill & Co.

William A. Jackson of Jackson-Wyatt Lumber Company.

Jacob Holtzman of HARDWOOD RECORD.

John T. Riley of Charles S. Riley & Co.

J. Randall Williams, Sr., of J. Randall Williams & Co.

W. M. Brune of Owen M. Brune Company,  
 G. G. B. Beecher & Barr,  
 J. B. Beecher & Barr,  
 J. C. Williamson, Media, Pa.  
 Henry Palmer, Langhorne, Pa.  
 George F. DeWitt, DeWitt Lumber Company,  
 New York  
 K. E. Bennett of Manger & Bennett, Camden,  
 N. J.

### PITTSBURG

The Goodyear Lumber Company has just completed a job of logging 8,000,000 feet of logs, 15,000 hardwood ties and 3,000 cords of bark on Media Run, Pa. The work was done by Magnus Clusto, a big lumber jobber of Lock Haven, Pa., who has worked on an average seventy-five men all winter.

The Kendall Lumber Company has secured as a new superintendent of its mill at Crellin, Md., E. E. Ferrier of Friendsville, Md., who was formerly superintendent of the Damascus Lumber Company at Damascus, Va. The Kendall plants at both Crellin and Kendall were forced to shut down a few days during the last deep snow, but are now running full.

L. N. Woollett, president of the Aberdeen Lumber Company, took a run around to Cincinnati and Chicago a short time ago and did some good business. He is bringing up a barge of cottonwood from the Southwest, which he is selling rapidly to box manufacturers.

The W. P. Craig Lumber Company won a suit last week against the East End Lumber Company of Shamokin, Pa., by which the defendant will have to pay \$300 for a car of lumber which was ordered from the Pittsburgh firm, but which was delayed in shipment.

W. W. Dempsey, the well-known Johnstown, Pa., lumberman, has bought a large interest in the planing mill business of L. C. Purvis & Co. at Butler, Pa. The new firm will be known as the Purvis Planing Mill Company.

The Allegheny Lumber Company has secured G. A. McDermott to cover its Ohio territory. He is well known in that district and formerly was with W. W. Dempsey.

J. M. Hastings, president of the J. M. Hastings Lumber Company, has gone to Hollywood, Cal., where he will spend the month of March with his family. The Hastings company has closed out all its property and machinery at Jacksonburg, W. Va., where it recently finished its hardwood operation.

The Fredonia Planing Mill Company, capital \$15,000, is a new concern at Fredonia, Mercer county, Pa., forty miles north of Pittsburgh. It was incorporated by Jonas A. Baker and W. H. Reisher of Fredonia, Pa., and C. C. Conkle of Pittsburgh.

The J. L. Lytle Lumber Company reports West Virginia stocks very light and is rather bullish on the poplar market. Its business with the Buckeye yards has been increased steadily this winter.

C. H. Babcock of E. V. Babcock & Co. has secured one of the finest home sites on Squirrel Hill, the most aristocratic section of Greater Pittsburgh.

The Monongahela River Consolidated Coal & Coke Company is preparing to move all its craft building and repairing plants to McKeesport, Pa., fifteen miles above Pittsburgh on the Monongahela river. The plants are at present scattered up and down the Monongahela river and the plant proposed will employ 800 or 1,000 men.

H. F. Demboff, president of the Acorn Lumber Company, reports a big lot of figuring being done down East, but says that fear of labor troubles is holding up many of the contracts. He is getting a nice business this spring with the yards.

C. C. Vaughn, a well-known yellow pine man, is the latest accession to the force of the American Lumber & Manufacturing Company.

He will handle that department at the Pittsburgh office.

George W. Nicola, president of the Nicola Lumber Company, has gone South to look over Carolina and Mississippi operations and timber tracts. He will not return until about April 1.

Bemis & Vosburgh are cutting over 60,000 feet a day of hardwood, spruce and hemlock at their big West Virginia plant. H. C. Bemis spent a few days at the Pittsburgh office recently.

The Flint, Erving & Stoner interests have formed the Southern States Lumber Company with R. H. Erving, E. H. Stoner and W. H. Donner, incorporators. Mr. Erving is in the South now shaping up the new proposition.

The Corry Timber Company has been formed at Corry, Pa., by Henry Kempel, W. Edward Marsh and J. R. Calkins of that place and C. E. Webster of Girard, Pa., to do a general timber business.

C. M. Van Meter, traffic manager of E. V. Babcock & Co., died at his home at 643 Park avenue, Avalon, Pa., after a brief illness of pneumonia. Mr. Van Meter had been identified with the Babcock interests for five years, and prior to that time was for a number of years connected with the freight claim department of the Pennsylvania Company.

The Goodyear Lumber Company has started to open one of the largest remaining tracts of timber on the stump in all Pennsylvania. It is located at Keating Summit and to reach it a branch railroad, twenty miles long, is being built in from the Buffalo & Susquehanna. The tract contains a large amount of hardwood and this will be manufactured chiefly into staves and shipped over the Shawmut railroad. It is likely that a big stave mill will be moved from Osvego to Keating Summit this summer.

A. M. Kinney reports a good inquiry for white oak and other heavy hardwood timbers from both mining corporations and railroads. He has just started another mill at Shannopin, Pa., on the P. & L. E. railroad and is running his other country mills full blast.

A. G. Breitwieser of the Breitwieser & Willson Company has gone away for a two weeks' pleasure trip. Office Manager Wilson of this company reports inquiry increasing right along and says that February business was very good considering weather conditions.

I. F. Balsley is preparing to have a formal opening of the new offices of the Palmer-Semans Lumber Company in the Oliver building Monday, March 14. They will be among the finest lumber quarters in the city.

The H. V. Curll Lumber Company is now making good shipments from Alderson, W. Va., where the new Glenray railroad there reaches its big tract of hardwood lands. H. V. Curll is back from a stay in Atlantic City and feels good over the hardwood outlook for spring.

The South Greensburg Lumber Company has sold its plant at Greensburg, Pa., to C. E. Rohland of Mill street, Greensburg, who will enlarge the business at once.

Pittsburg shippers have been complaining more the past two weeks of a car shortage and are taking the matter up with the railroad officials here. The trouble has been chiefly on the short lines and the mountain cuts where deep snows practically held up all traffic.

The Mead & Speer Lumber Company reports collections hard but general conditions fairly good. Its hardwood operations at Strange Creek, W. Va., are going ahead very nicely.

President Nelson Bell of the Furnace Run Sawmill & Lumber Company says, "We're busy," and says it with lots of force and confidence. This company booked an order for fifteen cars of timber about two weeks ago. It has added William Hunter to its force of salesmen, to cover Ohio territory. F. H. Thompson is doing good work for the company at the Philadelphia end.

S. C. Ewing, formerly office manager for the McDonald Lumber Company, has accepted a position with the Interior Lumber Company as salesman. The Interior is getting a better lot of inquiries this month and believes that spring trade is going to open up well.

Mayor William A. Magee has appointed as a tree commission to help beautify Greater Pittsburgh, Edward M. Bigelow, former director of public works; W. D. Grimes and City Controller E. S. Morrow. They can levy one-tenth of the mill taxes for their use, which will give them about \$75 to spend. The commission is going to work right away and will have the assistance of the Pittsburgh Civic Commission, which is doing an immense work for the general uplifting of the Smoky City.

The Pennsylvania Railroad Company has just issued its report of forestry operations in Pennsylvania, which shows that 3,482,186 trees have been planted since 1902. These have been placed at Pomroy, Vandyke, Eyer, Denholm, Connewago and Morrisville, Pa., Parkton, Md., and New Brunswick, N. J. A total of more than 1,000,000 were planted last year. In 1909 a special effort was made to grow ornamental shrubbery for use in parking, station lawns, etc., and 6,000 plants were imported from France. The big pressure treating plant at Mt. Union, Pa., is now in full operation and a small non-pressure plant has been established at Greenwich Point, where the second one will be built this spring. This plant will have a capacity of 1,000,500 ties per year or a total of 7,861,000 feet of lumber at Mt. Union alone. The Greenwich Point plant turns out 432,000 feet of lumber, 5,000 fence posts and 25,000 paving blocks a year.

The recent annual convention of the National Wholesale Lumber Dealers' Association at Cincinnati drew quite a number of Pittsburgh wholesalers who gave their able support to F. R. Babcock, who was elected first vice-president of the association. Those who went from this city are as follows: J. G. Criste, manager of the Interior Lumber Company; W. D. Johnston, president of the American Lumber & Manufacturing Company; E. V., F. R. and C. L. Babcock of the Babcock interests; Carl Van der Voort, secretary of the Pittsburgh Lumbermen's Mutual Fire Insurance Company; R. A. McDonald, president of the McDonald Lumber Company; Alexander Willson of Willson Brothers Lumber Company; J. H. Henderson, secretary of the Kendall Lumber Company; A. J. Diebold and Mr. Murphy of the Forest Lumber Company; W. J. T. Saint of Sharpsburg; I. F. Balsley, sales manager of the Palmer & Semans Lumber Company; Capt. Diver and W. W. Dempsey.

### BOSTON

William E. Litchfield, Wendell M. Weston of the W. M. Weston Company and Frank W. Lawrence of Lawrence & Wiggin were the delegates from the Massachusetts Wholesale Lumber Dealers' Association to attend the convention of the National Wholesale Lumber Dealers' Association at Cincinnati March 2 and 3. Mr. Litchfield is a member of the board of trustees of the National association.

The Keith Car & Manufacturing Company has been organized in Portland, Me., with a capital stock of \$2,000,000. The president and treasurer is James F. Bacon of Boston.

L. O. Davis of L. O. & E. S. Davis plans to take over the business. The firm will be dissolved. It is reported that four months from February 21 has been fixed for creditors to present their claims.

The Hon. John M. Woods of John M. Woods & Co. attended the convention of the National Wholesale Lumber Dealers' Association at Cincinnati last week.

At the recent annual meeting and banquet of the Lumber Dealers' Association of Connecticut,

held at the Hotel Elton, Waterbury, Conn., the following officers were elected: President, A. Aschumacher, Waterbury; vice-president, F. A. Lines, Ansonia; secretary-treasurer, L. A. Mansfield, New Haven. The following were elected directors for three years: L. A. Lampson, New Haven; John O. Fox, Putnam; Horace Hatch, South Norwalk, and H. P. Platt, New Britain. The meeting was one of the most successful ever held by the association and was largely attended. One of the Boston dealers who attended said it was the best gathering of lumber dealers he had ever attended. Frederick Joyce of Boston acted as toastmaster at the banquet. The guests were welcomed to the city by W. B. Hotchkiss, mayor of Waterbury.

At the annual meeting of the Massachusetts Wholesale & Retail Lumber Dealers' Association, held in Springfield, February 18, the following were elected officers: President, H. W. Sears, Middleboro; first vice-president, C. R. Ferry, Pittsfield; second vice-president, C. M. Forrest, Lowell; third vice-president, L. A. Willison, Holyoke; secretary, Ernest N. Bagg, Springfield; treasurer, M. L. Foster, Worcester; directors, E. E. Stone, Spencer; Edwin Bradley, Holyoke; J. L. Temple, North Adams; D. E. Palmer of Great Barrington and W. B. Gaines of Greenfield.

The Brayman Woodenware Company was recently organized at Phillips, Me., with a capital stock of \$75,000, of which \$20,000 is paid in. The president is Marshall Brayman, and the treasurer, Edgar A. Brayman, both of Phillips.

George Murchie of James Murchie & Son, Calais, Me., was a visitor in this city early in the month.

George Cushing of Andrew Cushing & Co., Ltd., St. Johns, N. B., visited New York and Boston last week.

W. A. McLean, president of the Wood-Mosaic Company, New Albany, Ind., was in the Boston market last week.

K. V. Hobart of Hobart & Co., Boston, has been making a trip through the West and South.

## BALTIMORE

The National Lumber Exporters' Association has scored another success in dealing with railroads and obtaining concessions from them. When the association was about to make complaint to the Interstate Commerce Commission at Washington against the Kansas City Southern and the Iron Mountain railroads on the ground that their charges on lumber from producing points within the state of Louisiana to New Orleans were lower on shipments intended for the domestic trade than on forwardings designed for export, the Kansas City Southern gave notice of the cancellation of the arbitrary of two cents on staves. The tariff making the concession has just been filed and will go into effect on March 28. This was one of the points contended for by the association, which maintained that higher charge is arbitrary and in fact an unfair discrimination against export shipments. Representations have been made on the subject to the railroads by the association, and the refusal of the two companies to equalize the rates induced the exporters to frame a complaint. Alfred H. Clement has been appointed one of the official tallymen of the association at New Orleans.

The J. L. Durnell Lumber Company, with headquarters at Norfolk, Va., and a mill at Brambleton, Norfolk county, has been taken over by the Brenda Lumber Company, Inc., a corporation formed under the laws of Virginia last January with a capital stock of \$25,000. The Brenda company has for its head J. L. Durnell, who was also president of the old company, and Robert McLean, secretary and treasurer. The board of directors consists of these two and J. T. Alexander of the Norfolk Veneer Company, E. L. Dinning and A. A. Wendel, the latter general

superintendent of the Norva Land & Lumber Company, of which Mr. McLean is general manager. The Brenda company was formed especially for the purpose of taking over the other corporation, and will continue to operate the mill, making a number of improvements, which are calculated to permit an increase in the output.

Mr. McLean visited the Norva company's plant last week and also inspected the mill at Brambleton, Va., which is being operated by him individually. He stated that the demand for the white gum turned out by his company was greatly on the increase. It was Mr. McLean who virtually created the demand. He purchased an extensive tract of gum timber, organized the Norva company and the mill at Wallacetown was erected. Much of the gum is manufactured into staves and headings for export, while some of it is used for other purposes. Last year the Pennsylvania Railroad Company took 5,000 cross ties, which were creosoted. The wood is said to be excellent for this purpose.

R. E. Wood, president of the R. E. Wood Lumber Company, and H. L. Bowman, manager of the sales department, have returned from a trip of several weeks through the southern states. They went as far as Florida and Alabama, and while recreation was their main object, some attention was also given to business. They found that the mills are asking high prices for stocks, and they were not able to pick up considerable sized lots of lumber at attractive figures. A marked firmness prevailed throughout the sections visited, and the mill manufacturers expressed themselves as confident of good returns in the future.

One of the visitors who arrived here last week was Carl G. Petersen of the firm of Laur O. Petersen of Copenhagen, Denmark, and Hamburg, Germany. Mr. Petersen is a son of the senior member of the firm and a partner with him. This is his first visit to the United States and he will take in a considerable part of the country, visiting chiefly the mills with which his firm has maintained connection. He came over on the steamship Mauretania.

M. S. Baer of the hardwood firm of R. P. Baer & Co. is on an extended European trip. He sailed from New York for Naples with Mrs. Baer, and it was his intention after landing to visit the principal cities of Italy, afterward going into Germany and other countries on the continent. Subsequently he planned to cross the channel into Great Britain. While sight-seeing was his chief object, it was considered likely that he would give some attention to the lumber trade situation abroad and endeavor to get information at first hand.

A. Harvey McCay, in charge of the Baltimore office of William Whitmer & Sons, Philadelphia, is down at Palm Beach, Fla., for a month recuperating and spending his vacation. He had not been away for some time and felt that he needed a rest.

Among the Baltimoreans who attended the annual meeting of the National Wholesale Lumber Dealers' Association in Cincinnati last week was John L. Aleock of John L. Aleock & Co., president of the Lumber Exchange here. He went in his official capacity, and it was his intention while out West to visit some of the lumber sections of West Virginia on the way home.

## CLEVELAND

Will Martin of the Martin-Barriss Company, one of the city's best-known hardwood men, is home sick with an attack of la grippe. He expects to be back at his desk again in a few days.

The federal engineer here has notified the Lake Shore Saw Mill & Lumber Company that it can proceed with a fill in Lake Erie, opposite its property at the foot of East Fortieth street, to a distance of 250 feet from shore. A bulk

head will be built and a wharf established where the company can load and unload lumber coming by boat. It will give the concern several additional acres of room.

Building permits for the month of February show a substantial increase over last year. The total number for the past month was 255, with a total value of \$590,020. The total for the previous month was 183 permits with a value of \$281,659, while for February of last year the total was 368 permits with a value of \$544,800.

The Cuyahoga Lumber Company, which has acquired the White City amusement park, is negotiating with eastern capitalists for its sale. The lumber company has a big claim for lumber against the concern and bought in all the stock. It now proposes to turn it over at a profit.

A. G. Webber of the Advance Lumber Company is back from a visit through the company's hardwood mills in the South and reports that the mills are working full time and turning out large volumes of lumber. It is being shipped, however, almost as rapidly as it is manufactured.

E. G. Carleton is back from a fishing trip to Florida, and is armed with a number of real "sure enough" photographs of fish which he says he caught.

Ralph Loveland and Frank Stone of Loveland & Stone, Cutler, Ont., were among the callers on the local trade during the past week.

C. T. Williams, the veteran boxmaker, who has been ill since last December, was back at his desk for a little while this week. He hopes to be entirely recovered soon.

A small fire supposed to have been started by tramps at the plant of the American Box Company during the week did about \$500 worth of damage. It was confined to several lumber piles.

The warm weather of the past week has started innumerable small building projects. It is believed that with the opening up of the spring in earnest everybody in the lumber business will be unusually busy in Cleveland.

The Smeed Box Company say that the box business is rapidly resuming a normal aspect. It is installing eight new machines and preparing for a big spring rush.

During the first week in May Cleveland wholesalers, including a number of lumber dealers, will make a four-day trade extension excursion into western Ohio and as far as Marion, Ind. It is expected that about thirty towns and cities will be visited.

## COLUMBUS

At a meeting of a dozen representatives of the wholesale lumber firms of Columbus, held recently, steps were taken to perfect a permanent organization of wholesalers of the Buckeye capital. No name was given the organization, but that matter will be taken up at a future meeting. The object of the organization is to become better acquainted and to further the social life of the lumber trade in Columbus. The inception of the association was in the temporary organization of wholesalers effected at the recent convention of the Union Association of Lumber Dealers in Columbus, when the wholesalers entertained the delegates with a special performance at a theater and by looking after their material wants.

The preliminary meeting was held at the Ohio club when the situation was gone over and it was unanimously agreed to form the organization. A committee consisting of John R. Goby, A. C. Davis, H. R. Allen, W. L. Whitacre and Edward Giesy was named to draft a constitution and by-laws to be acted on at the next meeting. The firms represented at the preliminary meeting were the W. M. Ritter Lumber Company, John R. Goby & Co., H. R. Allen & Co., H. H. Hildreth, The Throop-Martin Company, C. T. Nelson & Co., Powell & Rowe, J. H.

H. & C. W. L. Whitacre, McLaughlin-Huffman Lumber Company and M. A. Hayward & Sons.

C. G. McLaughlin, general manager of the McLaughlin-Huffman Lumber Company, reports a better outlook on all sides for the hardwood trade. He says prices show a disposition to advance and that railroads are in the market for a larger amount of materials. Mr. McLaughlin believes that the market will continue to expand as the better weather appears.

H. C. Bard of the Middle States Lumber Company returned the first of the month from a trip through the South. He reports a disposition on the part of the mills to hold on to their stocks.

H. W. Putnam, president and treasurer of the General Lumber Company, reports unchanged conditions in the lumber trade in Ohio. He believes that the lull has been due to the unfavorable weather and predicts better conditions since the warm days arrived. Orders are coming in steadily. The company has a large amount of logs in the Big Sandy, ready to be floated down to the mill at Ashland, Ky., as soon as the spring freshets are over.

H. W. Collins, manager of the central sales division for the W. M. Ritter Lumber Company, said: "The condition in the lumber trade is unchanged, with prices ruling steady. There is a good demand for oak, poplar, chestnut, basswood and ash. Dealers are now getting ready for the spring trade and buying will be more general when the winter breaks up." The company has added an additional traveling salesman to the central territory in Carl R. Asher who will cover western Ohio. His headquarters will be in Lima.

W. L. Whitacre reports a steady market, with the unfavorable weather holding back orders. He says prices, especially in hardwoods, have been holding firm. D. W. Kerr of the Whitacre company attended the hardwood meeting at Cincinnati the first of the month.

John R. Gobey reports a lull in trade, due to uncertain weather. He reports firm prices, especially in hardwoods where recent advances have been announced. He believes there is every indication of a better market as soon as winter leaves. Mr. Gobey reports strength in cypress.

At Wellsville, Ohio, the Wellsville Lumber Company has sold its yard and building material business to Forbes & Morrow.

The Whistler & Searcy Company of Ironton, Ohio, has started operations at its band mill located at Farmers, Ky., and report a nice demand for hardwoods.

A. C. Davis, head of the A. C. Davis Lumber Company, reports a steady market in hardwoods despite the unfavorable weather which has prevailed in this section. He says there is a disposition on the part of dealers to purchase. George B. Jobson, secretary of the company, was called to Detroit on business recently, leaving that city to attend the meeting of wholesalers at Cincinnati.

C. T. Nelson, a column manufacturer, reports a steady run of business, with bright prospects for the spring trade.

The M. A. Hayward & Sons Lumber Company reports a steady demand for oak flooring, which is one of its specialties. An advance in this line is looked for soon. Operations at the company's mill at Ford, Ky., are now started and the stock is larger. M. A. Hayward, head of the firm, is spending a several weeks' vacation at Battle Creek, Mich.

President Mulby of the Columbus Builders' & Traders' Exchange has named a committee consisting of W. H. Conklin, R. L. Watson and H. C. Agner to look after matters before the Ohio general assembly. One of the laws they will back is a bill to provide for a commission to formulate a state building code. The exchange is of the opinion that such a law is badly needed.

The wholesale and commission concern which has been operated under the name of H. D. Brasher on the eighth floor of the Columbus Savings & Trust building, has been changed to

a partnership under the name of the H. D. Brasher Lumber Company. The office has been moved to more commodious quarters on the seventh floor of the same building. The partnership consists of H. D. Brasher and his brother L. A. Brasher who was formerly a traveling salesman for the firm. Both were salesmen for the Van Cleave Lumber Company of St. Louis for a number of years before starting business in Columbus. The change in the firm and the change in offices were made necessary because of the great increase in business the past year. The company will act as jobbers and commission men for maple and hardwood flooring, yellow pine, shingles and dimensions.

J. A. Cheney, W. S. Hatcher, C. M. Anderson, B. F. Whipples and C. M. Voorhees have incorporated the Ohio Casket Company of Columbus with a capital of \$30,000. It will take over the coffin factory at 154 West Naghten street, formerly operated by the Capital City Casket Company.

### CINCINNATI

Pleasant spring weather is now being enjoyed in this section, and the result is seen in the outdoor activities in all the yards and mills in this vicinity, while the railroads are rapidly working out of their freight congestion. Business both in the downtown offices and around the mills and yards is said to be all that could be desired. Not only is this true of the hardwoods, but also of yellow pine, northern pine and building material of all classes. Furniture manufacturers are all busy and the mails are constantly adding to their orders.

One of the noted recent changes is that of J. Ed Dulweber, the handsome and successful lumber salesman for several years connected with the Cincinnati branch of Nicola, Stone & Meyers, who is now connected with the house known for years to the trade as John Dulweber & Co., with offices and yards along McLean avenue yards of the Southern railroad. B. F. Dulweber, too well known to need mention, is now the owner of this plant, which in the past generation was operated by his father. Under the present management the plant has grown to extensive proportions and covers several acres of ground, with an army of operatives. In the office department can now be found B. F. Dulweber, J. Ed Dulweber and John Dulweber, three of the sons of the founder. All of the brothers are born and educated as lumbermen.

C. H. Loveland of Winchester, Ky., dropped in at the Hardwood Manufacturers' headquarters to pay his respects to Lewis Doster. He spent several days here on business.

A dispatch received yesterday from Winchester, Ky., announced the death of W. R. Thomas, president and manager of the Ford Lumber & Manufacturing Company. Pneumonia was stated as the cause of death. Mr. Thomas was well known to the lumber trade of the Queen City, where he was a frequent visitor.

The Cincinnati Poplar Company, which removed its yards from Court street and Eggleston avenue in this city about a year ago to the outskirts of Newport, Ky., along the tracks of the Chesapeake & Ohio railroad, has been placed in the hands of H. Morrill as receiver. Tom J. Orr, well known to the lumber trade, is the head of the concern.

The classification, official grading and inspection rules of the Hardwood Manufacturers' Association, adopted at its convention in February, are now printed in pamphlet form of convenient pocket size and distributed to the trade.

C. M. Clarke, Cincinnati manager of the Swann-Day Lumber Company of Clay City, Ky., Winchester and other points, is now occupying his new and elegant suite of offices

on the tenth floor of the Second National Bank building. He says that business with the Swann-Day company is very satisfactory. While its mill at Clay City is closed down temporarily for repairs, the other plants are in operation. Mr. Clarke is one of the smiling optimists who see a splendid business in the near future and continued prosperity.

The Chamber of Commerce reports show that the receipts of lumber at Cincinnati for the month of February were 5,828 cars, against 5,404 cars for the same month last year. The shipments in February were 5,162 cars, while in February, 1909, they amounted to 4,525 cars.

H. S. Field of Justice P. Taylor & Co., Philadelphia, Pa., said this was his first visit to the Queen City and that he was both surprised and pleased at the magnitude of the city and its great facilities for buying hardwoods. He stopped long enough to look over the trade of the city and become acquainted. He was principally interested in chestnut and soft or red oak, and said the lumber trade spirit in Philadelphia was improving.

V. W. Long, president of the Long Lumber Company of Birmingham, Ala., was in the city for a few days last week on his way to Boston and Philadelphia. He dropped in on the big convention and was pleased with the large attendance.

Among the visitors in the Queen City in the past fortnight was W. Higford Smith of Antwerp, Belgium, a representative of Alfred Beting, the well-known European lumber merchant. He was touring the country in the interests of his firm and expected to remain in the country for some months, getting acquainted with the trade. He was principally interested in hardwoods for export and pitch pine. He left Cincinnati for the South, going via Memphis, Tenn.

While in no manner related to or acquainted with W. Higford Smith, A. P. Smith of Mt. Vernon, Ala., was also a sojourner in Cincinnati on the same days. A. P. Smith represents the Mt. Vernon Pump & Lumber Company, and after leaving Cincinnati made a short stay in Indianapolis. He said business down his way was showing signs of slow revival, but he had hopes that the year would show up very well.

Fred Mowbray of Mowbray & Robinson is again sojourning at Hot Springs, seeking rest. Mr. Mowbray returned from a long siege at the springs last fall and early winter, but was not feeling as robust as his former self and so returned for further rest. His friends, however, insist that he never looked so well as now.

J. B. Thomas of the American Cigar Box Lumber Company of Johnson City, Tenn., dropped into the city last week and put in a few days hustling for business.

Lewis Doster, the popular secretary of the Hardwood Manufacturers of the United States, returned to Cincinnati from a trip to the West in time to be present at the convention of the National Wholesale Lumber Dealers' Association at the Sinton. President R. M. Carrier was also an interested visitor.

O. O. Agler, president of the National Hardwood Association, was a welcome visitor at the sessions of the National Wholesale Lumber Dealers' Association.

W. J. Shippen of the Shippen Brothers' Lumber Company of Ellijay, Fla., spent some time in this city last week in the interests of his company.

Quite a number of the delegates to the convention of the National Wholesale Lumber Dealers' Association remained over in Cincinnati until Saturday night, calling upon the trade and getting acquainted with the Queen City lumbermen. There are still a few in the city working out business details. On Saturday noon President Clif S. Walker invited a number to be his guests at lunch at the now

famous "Woodpeckers' Table" at the Business Men's Club.

At its March meeting the Queen City Furniture Club extended a vote of thanks to the Hardwood Manufacturers' Association of the United States for its invitation to consumers to attend the meetings of its grading conference. A new board of officers, with W. J. Sextro, a prominent manufacturer, as president, was installed.

The new Provident Bank building is rapidly becoming a large lumber colony. The new offices of Fagin & Kirkpatrick, on the eighth floor, are now completely furnished and present a welcome appearance. Mr. Fagin was formerly with Dwight Hinckley, while Mr. Kirkpatrick is the well-known millman of the Ripley Mill & Lumber Company of Ripley, Ohio.

### TOLEDO

Building in Toledo during the past week has developed some activity and a season of unusual prosperity is anticipated. Contracts for new work have already been signed, amounting to more than \$3,000,000 and there is a large volume which has not yet reached the contract stage. The new work is not confined to any one line, but will consist of industrial, residence and commercial property. Present indications point to a season of unusual activity, and local lumbermen feel that they have made no mistake in building their hardwood stocks to their present large proportions.

W. S. Booth, manager of the Booth Column Company, who has been in the East on a business trip for the past three weeks, will return shortly. Reports from the local plant say that, while business has been dull during the winter season, the spring trade is now coming in, and prospects are for an unusual activity from this time forward.

Henry C. Wason, proprietor of the lumber firm of H. C. Wason & Co. of Toledo, died suddenly this week from heart failure. He had been a resident of the city for thirty-five years and was sixty-six years old at the time of death. He was well and favorably known to the lumber trade throughout this section and was a prominent member of the Masonic order.

The Hardware & Woodenware Manufacturing Company's plant at Kenton, Ohio, has again resumed operations after being closed down for a year on account of litigation. The full working force of 150 men will soon be engaged.

A. H. David of the David Lumber Company is on a business trip to Waterville, Ohio. The concern reports a brisk demand from factories for all kinds of hardwoods, with belated shipments from the Michigan district.

The name of the Traffic Bureau of Toledo has been changed to the Receivers' & Shippers' Bureau of Toledo. It will become a department of the Toledo Business Men's Club and will maintain offices on the sixteenth floor of the Nicholas building, where A. C. Fischer, secretary and commissioner, and O. B. Wood, rate clerk, will be in charge.

### INDIANAPOLIS

E. R. Parry of the Parry Manufacturing Company has returned from a trip to Florida and Jamaica.

The aggregate amount of building permits issued during February was \$334,765, as compared with \$312,710 for the corresponding month of 1909.

A. K. Hollowell, L. P. Hollowell and G. E. Hadley have organized the Veneer Joining Company in Indianapolis with \$5,000 capital. They will join and sell veneers and hardwoods.

Innes, Pearce & Co., furniture manufacturers at Rushville, are installing a 200 horse-power

Corriss engine, which it is believed will give the concern abundance of power.

William B. Barry, founder of the Barry Saw Company, died at his home in this city a few days ago. He was sixty-nine years old.

About 21,000 acres of timber land in Florida, which it is believed will yield 25,000 feet of lumber to the acre, has been purchased by Lee C. Thayer, W. C. Dudding and Charles S. Townsend of Greenfield.

The New Market Lumber Company has been organized and incorporated at New Market with an authorized capitalization of \$25,000. Those interested in the concern are William E. Childers, William W. Basenlark and Leland C. Childers.

Property formerly owned and occupied by the Mainland Manufacturing Company, manufacturers of hardwoods, has just been sold to the Enterprise Foundry & Fence Company, which is erecting a new factory. The property is at Yandes and Twenty-fourth streets.

R. F. Benson, S. M. Benson and Delia M. Butler have organized the American Lumber Company at Madison. The company has been incorporated and is capitalized at \$10,000.

T. G. Pierson of Spencer has been elected a director of the newly organized Spencer Commercial Club, which hopes to attract a number of new manufacturing plants to that city.

John B. Emerson, for twenty years superintendent of the Balke & Krauss Company, hardwood lumber dealers and manufacturers, was murdered near his home recently, presumably by a hold-up man. He was fifty-eight years old and was formerly engaged in the lumber business with his father, the late R. B. Emerson. A reward of \$1,000 has been offered for the apprehension and conviction of the murderer.

### EVANSVILLE

H. I. Cutsinger of the Putnam Veneer & Lumber Company of Roachdale, Ind., was in town this week.

Frank L. Donnell, sales manager for Young & Cutsinger with office in Indianapolis, spent a couple of days at the local office of the firm this week. Mr. Donnell is pleased with the outlook for business.

At a meeting of the stockholders of the Hickman-Elbert Wagon Works of Owensboro, Ky., recently it was decided to sell the plant and disband the company, as the factory for the past two years has been a losing venture. The company was incorporated December 30, 1904, and was capitalized at \$300,000. James H. Parrish, who is now serving a sentence in the penitentiary for wrecking the Owensboro Savings Bank & Trust Company, was one of the moving spirits in starting the plant. For a time the plant was one of the busiest in this section. Two years ago the plant was shut down and has been running spasmodically since. The plant will be sold by the sheriff on March 15, the receipts to go towards paying the numerous debts of the concern.

Walter G. Bass of the National Veneer & Lumber Company of Indianapolis was in Evansville this week.

The Indiana Hardwood Lumber Company was incorporated at Shelby, Ind., recently with a capital stock of \$40,000. The directors are Joseph T. Arthur L. and Clay B. Johnson. The concern will manufacture hardwood lumber.

George I. Cheate, representing the Manufacturing Wood Workers' Underwriters of Chicago, was in town on business last week.

The new plant of the Neyer Split Seat Company is nearly finished and will be in operation about April 1.

Among recent visitors to the trade here were George M. Hoban with George J. Kennedy, 1 Madison avenue, New York, and F. J. Roys, sales manager for the Fullerton Powell Hardwood Lumber Company, South Bend, Ind.

An addition 80 by 160 feet, two stories high, is being erected at the plant of the Carriage Woodstock Company, Owensboro, Ky. It will be used for building automobiles. The company expects to turn out 200 finished cars this season.

The Wabash Manufacturing Company of Wabash, Ind., is erecting factory buildings at Terre Haute, and expects to move its plant there in April. The company manufactures a line of children's wagons, hand cars, steel sleds and also porch furniture such as swings, settees, etc.

### MEMPHIS

Business conditions are very wholesome throughout the Central South. Bank clearings in Memphis during February were more than \$5,000,000, or twenty-seven per cent ahead of last year and broke all records for that month. This showing is regarded as exceptionally favorable and it is all the more striking when it is reflected that there was very little cotton sold during the month. The lumbermen have contributed in a very large way to this excellent result. The railroads themselves make no secret of the fact that the lumber business is furnishing a very large proportion of the total tonnage they are now handling.

The actual returns covering building operations for February have not yet been made public, but it is stated on official authority that the total is well ahead of last year. Reports from Birmingham also show a considerable gain for February, the total for the month being \$274,867, compared with \$169,848 last year. This brings the increase at Birmingham since January 1 over last year to \$440,107. Little Rock also shows an increase and there is no doubt that building operations throughout this territory are on a large scale. Contrary to expectations, the permit for the Union station was not taken out during February. However, grading has already begun for this structure and the permit will be secured at an early date. It will involve between \$2,000,000 and \$3,000,000.

The big band mill of Russe & Burgess, Inc., in North Memphis, has resumed operations after an extended shut-down while repairs and improvements were made, which have increased the capacity of the plant fully twenty-five per cent. The management states that the demand for hardwood lumber is very good, and notes particularly that the export situation is improving.

The Hugh McLean Lumber Company, New South Memphis, has kept its mill in steady operation recently. This company has a large supply of logs in its yards in New South Memphis, and it states that the demand is good enough to justify operations on a full scale. It is making a specialty of cutting white oak at the present time.

The Mississippi river will reach a stage of thirty feet by the latter part of this week, but it is now conceded by government officials that there will be no rise above the danger level, which is thirty-three feet. Reports from the upper Mississippi indicate that the water is rising to some extent, but those from the Ohio river say that the water is falling. There is a splendid stage of water for logging purposes but it is regarded as doubtful whether much timber will come out on this rise for the reason that the woods have been so wet that it has been well nigh impossible to do any logging.

G. H. Smith, manager and purchasing agent for the Antwerp Wine Company, Antwerp, Belgium, was in Memphis during the past few days, negotiating for the purchase of a large quantity of white oak staves in the manufacture of wine casks. The company has bought a good many staves here in the past, securing the bulk of its supply from this market.

The Memphis Machine Works has filed application for an amendment to its charter whereby its capital stock is to be increased to \$40,-

000 J. R. Pepper, W. N. Taylor and others have signed the application.

The Chapman Dewey Lumber Company, according to advices received here, has given the Arkansas authorities notice that it has decreased its capital stock from \$400,000 to \$300,000. This company has extensive holdings in and around Marked Tree, Ark., just west of Memphis.

As an offset to the announcement of the decrease of the capital stock of this company comes the report from Helena, Ark., that the Archer Lumber Company at that point has given notice of the intention to increase its capital stock from \$100,000 to \$250,000.

Houston Brothers have resumed operations at their hardwood plant at Walters, Miss., after an idleness of several months.

The Cooper-Purdy Chair Company, capitalized at \$100,000, has succeeded and taken over the plant and other holdings of the Malvern Chair Company, Malvern, Ark. C. H. Purdy, formerly of Philadelphia, has been elected president and general manager of the new company. Operations have already begun under the new management.

The Blythesville Lumber Company of Blythesville, Ark., has been granted a charter under the laws of that state. The capital stock is \$25,000. J. H. Elkins and A. L. Sanders are the incorporators.

Announcement is made by W. W. Craig, one of the Ohio capitalists who recently purchased the plant of the New South Works at Columbus, Miss., that operations will not be resumed until August 1. The reason assigned is the lateness of the season. It is further stated by the new management that up-to-date machinery is to be installed and that facilities are to be prepared whereby the company will be able to turn out a higher grade article at smaller cost than under the old regime.

John W. McClure, secretary-treasurer of the Bellgrade Lumber Company, and first vice-president of the Lumbermen's Club of Memphis, is one of the happiest men in Memphis at the present time. He is receiving the congratulations of his many friends on the birth of his first son, a bouncing ten-pounder.

George D. Burgess, John W. Dickson, J. S. Dickson, W. S. Darnell, Frank May, J. T. McSweeney, E. R. McKnight and other prominent lumbermen of this city were the guests of J. F. Meath, commercial agent of the Illinois Central railroad Wednesday afternoon, when they went to New South Memphis to inspect the new system of unloading cotton and lumber from barges into freight trains. The work is done by machinery which is known as an electric telepher. The machine is rather simple, but it is capable of doing very rapid work, and the officials of the Illinois Central believe that it marks the end of the trouble with roustabouts for unloading heavy traffic from the steamboats. No attempt will be made to handle cotton with the telepher this season, but lumber and logs brought in on barges or rafts will be handled by this means which accounts for the fact that the lumbermen here are much interested in the new movement. The telepher not only elevates logs and lumber from the barges but carries them a distance of several hundred feet to the freight cars of the Illinois Central Railroad, standing on top of the banks. It is expected that this system of loading and unloading will materially reduce the cost of bringing logs and lumber to Memphis by water.

The plant of C. & W. Kramer Company, Prineadale, Ark., was totally destroyed by fire a short time ago. Owing to the fact that the plant was closed down a couple of days for repairs, but few of the employes were on hand. The fire made very rapid headway, destroying not only the mill but 3,000,000 feet of lumber and all of the houses occupied by the employes. The loss is estimated between \$70,000 and \$75,000, while the insurance is considerably less than

that amount. No plans have been announced by the management as to the future.

W. A. Gilchrist and W. H. Greble have just returned from Arkansas where they went to look after the interests of their firm.

Frank B. Robertson, J. W. Thompson, James E. Stark, W. R. Barksdale of Memphis and William Wright of Portland, Ark., have returned from Cincinnati, where they attended the annual of the National Wholesale Dealers' Association. J. W. Thompson, president of the J. W. Thompson Lumber Company, has been one of the trustees of that organization for some time.

The Arkansas, Oklahoma & Western Railway Company will extend its line from Rogers to Huntsville, Ark., a distance of thirty-five miles. The contract for the construction of all the necessary bridges has been let to the W. R. Felker Construction Company and the same firm has the contract for grading the entire line.

The Valley Log Loading Company, of which J. W. Dickson is president, reports that it handled about 950 cars of logs into Memphis during February and that it will handle a large amount during March. Mr. Dickson states that the railroad has withdrawn a considerable number of the cars heretofore used by the log-loading company, but it does not anticipate any particular trouble on this score as it believes that the Yazoo & Mississippi Valley Railroad Company will furnish all the cars necessary.

Work is making rapid progress on the 50,000 ft. band mill being built by the Wisconsin Lumber Company of Chicago at Huttig, Ark. The company hopes to have this mill in readiness for operation by the latter part of July. The site of the plant has been cleared and side tracks laid so that the material may be unloaded without any hitch.

C. L. Wheeler of J. W. Wheeler & Co. has returned from New Mexico, where he spent the greater portion of February. Mr. Wheeler states that the big band mill of the firm at Madison, Ark., is running on full time and that the outlook is very satisfactory.

There will be a Hoo-Hoo concatenation following the banquet of the Retail Lumber Dealers' Association of West Tennessee and Kentucky at the Business Men's Club Tuesday evening, March 8. A number of applications have been taken and many kittens will be in search of light. The association will be in session Tuesday and Wednesday and a number of subjects of interest to the retailers will be fully discussed. In addition to the banquet and concatenation, the delegates will be taken on a tour of the manufacturing district of Memphis.

## NASHVILLE

"The Selects" and "The Saps" are the names of the two tickets that will be run by the Nomination Committee of the reorganized Nashville Lumbermen's Association, the election to be held March 19. The committee has arranged two strong tickets and there is no doubt that entire satisfaction will result, no matter which wins, or if a mixed ticket wins. The personnel of the two tickets are:

"Selects"—J. W. Love, for president; A. D. Card, vice-president; F. Fetzner, secretary; A. N. Price, treasurer; and H. Baker, S. Lieberman, J. H. Baird, J. R. McIlwaine and W. J. Wallace, directors.

"Saps"—M. F. Greene, president; J. S. Denton, vice-president; S. C. Ewing, secretary; W. J. Cude, treasurer; and A. B. Ransom, C. E. Hunt, Hamilton Love, J. Hamilton and A. Love-man, directors.

Already the Membership Committee of the new organization has reported fifty new members and these were approved at a meeting held a few days since.

Simon Lieberman of the firm of Lieberman, Loveman & O'Brien has returned from his annual camp fish in Florida and reports a most delightful trip. Annually Mr. Lieberman with

a congenial party of friends from Nashville and elsewhere makes for Homosassa on the western coast of Florida, and there he and the party of ten or a dozen take a boat and make a thirty-mile run to the Chesowhitzka river. It is up this beautiful river that they do their fishing and camping. In the day they amuse themselves trolling and still-fishing for the myriad bass and other game fish that abound in the clear waters of the river and at night they fight mosquitoes, swap lies, brag about the fish they caught and argue about who caught the biggest one. At none of the pastimes have any of the "bunch" got anything on the veteran lumberman and from confidential advices from the camp none have a thing on him either in the eating line. Last year Mr. Lieberman had the honor of catching the biggest bass of the trip, a monster weighing 9½ pounds, and this year he was right up "in the money," as it were, on the size and extent of his catches.

The annual report of Building Inspector E. A. Laurent of the city of Nashville submitted to Mayor Howse a few days since shows that for the year 1909 the building operations of the city footed up a million and a half dollars. The total number of permits was 2,389.

A special from Jackson, Tenn., announces that the W. W. B. Company, a hardwood manufacturing plant of Richmond, Ind., is seeking a location in the South to manufacture spokes, handles and other hardwood specialties. It is probable that Nashville, Jackson and other cities will be visited in the near future by representatives of this company.

A special from Decatur, Ala., announces the incorporation there of the E. C. Payne Lumber Company with a capital stock of \$17,600. The officers are: E. C. Payne, president and general manager; J. D. Bush, secretary and treasurer, and R. L. Parsons, superintendent.

F. P. Handley, a prominent lumberman of Dickson, Tenn., was taken seriously ill a few days since, but with timely medical assistance was soon out of danger. He is with the W. P. Brown & Sons Lumber Company.

Commissioner of Agriculture John Thompson the other day advanced some timely and interesting suggestions for the state of Tennessee along the line of forest preservation and conservation. He points out that there are thousands of acres of cut-over lands in the state which are not suitable for cultivation and which finally revert in many instances to the state for taxes, and even if they do not so revert he thinks these lands could be secured for a mere song. He proposes that the state use or acquire these tracts to be used for forest preserves. Mr. Thompson declares that the time has not only come for the southern states to maintain forest preserves, but he maintains that as far as local conditions will permit these laws in the various states shall be practically uniform. Recent statistics gathered on the subject of timber cutting in the South are to the effect that there are 14,000 sawmills in this section, representing an investment of \$200,000,000 with an annual output of lumber valued at \$300,000,000. This estimate went further and was to the effect that the chiefest lumber supply of the nation is in the South, where there are 250,000,000 acres of forest lands containing 600,000,000 feet of the best hardwood to be found anywhere. Commissioner of Agriculture Thompson insists that the South must continue to be the country's chief source of timber and that consequently the South's forests must be maintained.

The offices of the W. J. Cude Land & Lumber Company have been moved from the Stahlman building to the rooms over the Hermitage National Bank, of which institution Mr. Cude is vice-president.

A prominent visitor to Nashville during the past week was G. A. Maxwell of Cookeville, Tenn.

C. F. Gilmore of the Goshen Lumber Com-

## BRISTOL

pany, Goshen, Ind., bought a dozen cars of walnut here last week.

A federal plum was landed last week by a Bristol lumberman. It was the Bristol postmastership, paying \$3,500 per year, which went to Gaylord E. Goodell, a wholesale lumberman of Bristol, who was for many years in the sales department of J. A. Wilkinson.

Among the visitors in Bristol this week was George H. Mell of the Montezuma Lumber Company, of Kane, Pa. He came here to look after his company's operations in this section.

The Holston Club gave a farewell banquet this week to B. B. Burns of the Tug River Lumber Company apropos of the moving of the offices of the company to Huntington, W. Va. Mr. Burns' departure is sincerely regretted by the hardwood fraternity of Bristol.

C. Boice, who was a visitor in Bristol last week, and who has important connections in this section, has just closed a deal for the output of a mill at Richlands, Va., to be handled through his Richmond offices.

Several lumber corporations in this section may be subjected to fines for not having made full reports on March 1, under the law providing therefore, in connection with the federal tax of 1 per cent of the net incomes of corporations. It is said that at least in one or two cases it was impossible to get the report up, or rather to take an inventory. It is believed that the government will exercise leniency the first time and allow the reports to be made later.

J. A. Wilkinson reports the outlook for business as improving. Most of his mills are running and considerable new business is being received.

The Paxton Lumber Company is preparing to put in a new circular mill near Galax, N. C., on the Carolina, Clinchfield & Ohio railroad.

W. H. Bolling, a prominent hardwood manufacturer of Galax, Va., was a visitor on the Bristol market the early part of the week.

The Norwood Lumber Company, which recently purchased some 15,000 acres of timber in western North Carolina, is preparing to at once dismantle its bandmill in West Virginia and move it to North Carolina to develop the new property. The company's timber is situated on the Murphy branch of the Southern railway, in western North Carolina.

J. A. Stone of the Stone-Huling Lumber Company has returned from a business trip in Tennessee.

Several bandmills that have been forced to close down on account of the extremely rough weather of the past few weeks, will start again this month. Spring has now set in and it is believed that there will not be much more delay on account of the weather.

George W. Peter of the Peter-McCain Lumber Company has just returned from a visit to Philadelphia and other eastern points. Mr. Peter says that the lumbermen there are delighted with the prospects for business. He says that there seems to be a shortage of stock on the yards and believes that prices will move upward.

D. D. Hartlove, the well-known Baltimore hardwood buyer, formerly of Bristol, is in this section placing orders for immediate delivery of stock.

## LOUISVILLE

The sessions of the Louisville Hardwood Club are divided into three parts, the discussion of trade conditions, railroad rates and the coming convention of the National Hardwood Lumber Association, which will meet in Louisville June 9 and 10. The improvement in business is a topic of never-failing interest, of course, while the success of the Transportation Committee in

securing better rates and traffic regulations for this market has encouraged the club to go into this subject deeply. The result is being seen in the fact that the hardwood men are now being able to enter markets from which they have been shut out by prohibitive railroad conditions.

While the Entertainment Committee of the club, which is charged with the important duty of seeing that the visiting lumbermen are properly entertained when they visit the Kentucky metropolis three months hence, has not got down to brass tacks yet, a meeting will be held soon to go over the many plans the committee has thought out. T. M. Brown of the W. P. Brown & Sons Lumber Company believes that there will be 1,000 here, and the plans of the club will be made on that basis. Something rich, rare and racy is promised for the visitors.

Regarding the railroad question, the action of the Interstate Commerce Commission in taking up the whole subject of milling in transit is expected to result, provided the commission approves that plan, in Louisville securing the reconsignment privilege, by which lumber shipped into the yards here and then rebilled to consuming points would get the benefit of a through rate. This practice, it is asserted by President A. E. Norman and other members of the club, is in vogue at many other points, and there is no reason why Louisville should be discriminated against. It results in a considerable decrease in the rate, and when it is in effect puts the lumberman who has the privilege at a decided advantage over his competitor who hasn't it. The club has retained the firm of Hines, Chandler & Norman to represent it before the Interstate Commerce Commission, and it is believed by the members of the club that Louisville will have the reconsignment privilege extended to it if the milling in transit proposition is approved by the commission. If it isn't, then the privilege will be abolished everywhere, and this market will be no worse off, relatively, than others.

Lumbermen were interested and rather disappointed in the action of the state legislature, which, after passing the forestry bill through the senate, turned it down in the house by a narrow margin. The bill provided for the creation of a State Forestry Commission, which was to have charge of forestry in this state and to exercise general supervision over the timber operations. The lumbermen raised no objections, and it is believed that had the bill been passed conservative steps would have been taken in the direction of scientific lumbering without injuring the lumber business of the state. The bill was defeated because of the appropriations it carried.

Members of the Hardwood Club are much pleased at the interest being taken in the organization by the North Vernon Lumber Company, which recently became a member. The company, which has its principal offices in North Vernon, Ind., conducts its hardwood business here and operates a good-sized band sawmill. The officers of the concern are: Frank M. Platter, president; Charles E. Platter, vice-president; Joseph H. Powell, treasurer, and Orval R. Platter, secretary. The club now has ten members and is in a flourishing condition.

The Norman Lumber Company has not yet had an opportunity, because of bad weather, to begin moving to its new quarters on Magnolia street. Conditions have settled considerably, however, and it looks as if the process of changing base will commence shortly. Mr. Norman believes that the new site will be an improvement over his present one.

H. J. Gates of the Louisville Point Lumber Company is in the mountains looking after stock of the company. The heavy demand has cut into that held at the Louisville yards, and Mr. Gates is getting the lumber at the Ford mill in shape to ship. The company sells freely to manufacturers of automobile bodies, and has a good

trade in wide poplar, exceptionally good grades of which are required by the makers of the benzine buggies. W. P. Brown & Sons' Lumber Company has also done well in this line, though the trade is unusually difficult to handle on account of the extreme care which must be taken with the stock. Prices on all grades are going up, E. L. Shippen of the Louisville Point company said. He added that good weather is enabling his concern to ship out a lot of orders that bad weather delayed the movement of.

Barry Norman of E. B. Norman & Co. has returned from a trip down the Ohio river. He went down on a scouting expedition to recover as many as possible of the logs which the ice and high water deprived him of. He lost 1,100 and succeeded in getting 700 of them back. There was a payment of twenty-five cents salvage for each log recovered on the Kentucky side of the river and fifty cents for those picked up on the Indiana side. They were gotten into fleets and will be towed back to the Louisville mill as soon as possible. Mr. Norman's company was the only loser here, but thousands of logs belonging to C. Crane & Co. of Cincinnati passed Louisville and landed if the term may be used in the Mississippi river.

S. E. Booker, who has charge of the box department of E. B. Norman & Co., has returned from French Lick, Ind., where he attended the convention of the National Association of Box Manufacturers. He enjoyed the meeting a great deal. While there he discovered that he had a chorus girl in his family, a fact of which he had not been aware. It turned out that Bodley Booker, his younger brother, had that sort of part in "Turvyland," a musical comedy produced recently in Louisville by the Arcadians, the dramatic organization of the University of Virginia, where young Booker is acquiring a higher education.

J. T. Armstrong of the Tyler Box Company, A. W. Cornwall, Jr., of the Mengel Box Company and H. W. Elbry and Wallace Embry of the Bell-Coggeshall Box Company, all of this city, who attended the French Lick meeting, are back, and pronounced the convention unusually interesting and profitable. Mr. Cornwall was accompanied by his wife, who assumed his name just three weeks ago.

T. M. Brown of the W. P. Brown & Sons Company is making hay while the sun shines, or, to put it more accurately, is shipping lumber while the sun shines. Bad weather put him, like the rest of the hardwood folks, behind, but he is rapidly catching up. Business is fine, he said, and the scene in the big yards of the company at Sixth and A streets testified to that.

H. A. McCowen of the Ohio River Saw Mill Company came down for a little while from Salem, Ind., where the furniture factory in which he is interested is located. Business with the company is good, according to R. F. Smith, the local manager. The McCowen furniture factories absorb a large part of the saw mill's output.

C. R. Mengel and D. C. Harris, president and traffic manager, respectively, of C. C. Mengel & Bro. Co., are back from a two weeks' trip in the South. Mr. Mengel had the pleasure of seeing one of his African cargoes of mahogany logs come in at Pensacola, and was much pleased at the sight. They also visited Mobile while they were away. Business with the company is excellent. J. C. Wickliffe, secretary, who is back on the job after a trip through the West Indies and various other sections of this hemisphere, saying that February was one of the best months the company ever had. Building reports are very encouraging, also. In order to take care of the increasing demand for yard room, the company has filled in a low part of its tract in South Louisville, and has added several acres to its available space.

Though rain has interfered somewhat with shipments, business generally is good, said Ed-

ward L. Davis of the Edward L. Davis Lumber Company. Claude Sears of that company, who is a member of the Entertainment Committee of the Hardwood Club, is working his mental apparatus unusually hard framing up some "stunts" for the hardwood lumber convention in June. He believes that it will be a hummer.

John Davey, who is known as the "tree doctor," will deliver a lecture here shortly on the subject of "Our Wounded Friends, the Trees." Mr. Davey is said to be an expert on the care of trees, and will be brought here under the auspices of the Woman's Outdoor Art League.

It has been announced that the recommendation of the Kentucky Retail Dealers' Association, which convened here recently, regarding the adoption of the strip count instead of face measurement as a basis for handling flooring, ceiling and other dressed and matched lumber, has been indorsed by the retailers of Louisville, and that it will go into effect beginning March 15. The Louisville Lumbermen's Club, the organization of brokers and retailers, had a beef-steak dinner at the Louisville Hotel March 5. William C. Ballard is president of the organization.

Senators Paynter and Bradley, representing Kentucky at Washington, are joining with Representative Langley in an effort to secure \$50,000 additional for the improvement of lock 14 on the Kentucky river. The river is much used by the lumber people.

The Louisville Bridge Company may double track its bridge across the Ohio at Fourteenth street. The announcement of this probability has interested the hardwood men, as a great deal of lumber shipped out of here goes over that bridge, which is used by the Pennsylvania and the Monon railroads. The single track has cramped its facilities considerably.

The State Railroad Commission has adopted the demurrage rules approved at the national convention of the Association of Railroad Commissioners. Average demurrage, giving credits when less time than the limit of forty-eight hours is consumed in unloading, is the feature of the system. The Hardwood Club recommended that this feature be incorporated when the subject was up for discussion at Washington.

Improved business conditions all over the South are indicated by the report of the Louisville & Nashville Railroad Company for the three weeks of February covered by the report. An increase of \$341,000 is shown, while since July 1, the beginning of the fiscal year, the increase in gross earnings is \$3,496,000.

The lumber interests of the state are much interested in the good roads bills now in the legislature. It is feared that the session will adjourn before they are put through. They are the result of the adoption of the good roads amendment to the state constitution at the November election. Bad roads are the bane of Kentucky lumbermen, many mills being idle right now because it is impossible to transport logs over the muddy highways.

The report of the building inspector for February shows that 130 permits were issued for a total of \$318,988, as compared with 151 permits in February, 1909, representing \$100,000. The gain of more than 200 per cent is considered encouraging.

Lumbermen of Louisville recognize an old friend in E. L. Roederer, who has been appointed division agent of the Big Four railroad with headquarters in Louisville. He was formerly located here, and owing to his familiarity with the lumber situation and his desire to help the hardwood market, he won a place in the hearts of the local men.

The Moody-Mitchell Lumber & Building Company has filed an amendment in the county clerk's office enlarging the scope of its business and fixing the amount of its indebtedness at \$70,000. Those interested are John Mitchell, W. H. Feltman and J. R. Kirwan.

## ASHLAND

Vansant, Kitchen & Co. placed in operation their double band mill last week and have on a supply of logs that will run them for a short time. They did not receive the amount of timber on the tides of last week that they had expected, as the rise in the Big Sandy and its tributaries was not sufficient to bring out a large supply of timber. Large amounts of poplar lumber are being loaded out at present, making room for the new stock. The company is now making a specialty of long oak timbers in addition to poplar lumber. Regarding present conditions, the office reports that the receipt of large orders and inquiries are more plentiful than they have been since before the panic of two years ago.

B. F. Vansant, lumber dealer of Morehead, Ky., was a business caller in our city and visited our lumbermen. Mr. Vansant has a very optimistic feeling as to the lumber business for this year and is very much pleased over the outlook.

Leon Isaacson, vice-president of the Yellow Poplar Lumber Company, was a recent business caller in the city. He advises that a large supply of timber was received on the tides of last week, although not as much as was expected. The company is very busy in the logging operation some distance from Elkhorn City, and expects with the new splash dam it has in the brakes of the Big Sandy to get out more timber this season than ever before.

The Wright-Saulsberry Lumber Company is running its mills again and loading out a number of cars this week, consisting of oak and poplar lumber and oak timbers, shipping, especially, some very long oak timbers, of which material it makes a specialty. The company received a fair supply of timber on the tides and it is expecting more on the tides of this spring than it has received thus far. Business with the company is very satisfactory and prospects are very encouraging for this year.

The Miller-Crosier Lumber Company, the new firm of Huntington, reports the work of building new houses for its men and also the hotel and commissary building at the large mill it is erecting near Anthony, W. Va., moving along nicely. Mr. Miller advises that the company has a large portion of the right-of-way graded for the railroad, which is being constructed for the purpose of hauling its timber to the mills on the C. & O. railway. The company expects to be in operation in a short time.

The Dimension Lumber Company of Herkimer, N. Y., is operating its band mill at this place. This is the first it has had this mill in operation for some time on the account of having no timber. The company is putting the lumber on sticks, which will later be shipped to its own factories, where a large portion of its lumber is consumed in the manufacture of dimension stock and furniture.

August Schmidt of the Herman Lumber Company spent several days last week on a business trip to Louisville, Ky. Very good reports are received from this company's office as to the present conditions of business and the amount of orders received. The company makes a specialty of cutting its lumber into knock-down furniture stock, shipping it mostly to eastern customers.

## ST. LOUIS

Building operations during the month of February fell off in comparison with February of last year. The total estimated cost of the buildings proposed in the 557 permits issued during the month was \$1,229,263 against \$2,170,041 for the 655 permits issued during February, 1909. This shows a decrease of \$940,778. New buildings last month aggregated \$1,111,495 and \$117,768 was spent in alterations.

The following is a report of the movement of lumber at this market during February: Receipts by rail during February, 1910, were 13,488 cars; during February, 1909, there were 11,398 cars; an increase of 2,094 cars in 1910. Shipments by rail during February, 1910, were 9,230 cars; shipments by rail during February, 1909, were 8,243 cars, an increase of 988 cars during this year. During February of this year there were 37,000 feet received by river. Last year there was none. There were no shipments by river either last February or this February.

The lumber inspected and measured by the Lumbermen's Exchange of St. Louis during February was as follows, as reported by Secretary A. H. Bush:

Plain oak, 290,352; cypress, 54,787; maple, 1,704; ash, 83,718; poplar, 39,755; sycamore, 245; cottonwood, 93; cherry, 154; locust, 22; spruce, 16,065; pecan, 12,469; gum, 14,496; quartered oak, 57,333; hickory, 4,882. Total, 576,075 feet.

The Federal Court of Appeals has affirmed the verdict of the United States Court for the western district of Arkansas against the St. Louis Stave & Lumber Company, finding it liable for damages of \$1,894.43 for timber cut from government land in Arkansas. An improper survey of the last is said to have occasioned a misunderstanding about ownership of the timber.

A good business is reported by the Krebs-Scheve Lumber Company. Many inquiries are coming in and the company looks for a good demand for hardwood lumber during the spring months.

R. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, reports a nice trade on all items on the hardwood list. The sales of gum during the past few weeks have been quite large. The company's facilities for handling and the promptness with which it can ship lumber, owing to its mill connections, is a great advantage that it has over the majority of hardwood dealers. Alf. Bennett, president of the company, has returned from a business trip to Little Rock, Ark.

The F. C. Moore Lumber Company has changed its name to that of the Moore-Jordan Lumber Company, and its capital stock has been increased from \$2,000 to \$10,000. F. C. Moore, president of the old company, is a well-known hardwood lumberman, and one of the board of directors of the Lumbermen's Exchange of St. Louis. On February 1 the office of the company was moved to its yard in the north end, where it has excellent shipping facilities.

Gum and other items on the hardwood list are reported in good demand by the Garetson-Greaseon Lumber Company.

After attending numerous conventions throughout this territory, Julius Seidel, president of the Julius Seidel Lumber Company, is at home. He says the prospects everywhere are very good for hardwood lumber, just as soon as the spring demand begins.

A steady trade in all hardwood lumber items is reported by E. H. Luehrmann of the Chas. F. Luehrmann Hardwood Lumber Company. This is particularly true of red gum.

The Gram & Noser Lumber Company, wholesale hardwood lumber, dissolved a few days ago. However, it is reported that both members of the old firm will go into business again in a short time.

The Noser-Eppler Lumber Company was incorporated on March 2, to deal in all kinds of lumber. The capital stock is given at \$6,000. Those interested are Thomas J. Noser, Louis R. Eppler and Anthony Kulage.

## LITTLE ROCK

According to railroad men, there has probably never been such a demand for building material before in the history of the railroads in this section of the country; at least, material for railroad construction work, bridge timbers,

etc. This is particularly the report that comes from the transportation department of the Rock Island lines.

From the lumber trade there is also a most favorable comment, and the pessimistic note of a few months ago has entirely disappeared.

There has also been an unusually large number of lumber companies chartered within the last few weeks, indicating unusual activity in all lines throughout the state. Among the latest is the Home Lumber Company of Prescott, capitalized at \$15,000, incorporated by W. A. Hatley, president; T. H. Duke, vice-president; J. E. Williams, secretary-treasurer. This company will establish and operate both a sawmill and planer at Prescott.

The Blythesville Lumber Company, capitalized at \$25,000, all subscribed, is another of the husky lumber concerns to organize for operations in eastern Arkansas. The incorporators include W. W. Holipeter, president; J. H. Elkins, vice-president; A. L. Sanders, treasurer; R. L. Morris, secretary; J. C. Blair and T. B. Morris.

The Southwest Manufacturing Company of Little Rock, was recently granted a charter. It is capitalized at \$25,000, and will do a general saw milling business. Incorporators include C. A. Sawyer, M. G. Lapierre, A. J. Hale and Alvin Boss.

C. T. Abeles of the Abeles Lumber Company of this city, head of the committee pushing the project for a Hoo-Hoo temple for Little Rock, announces that the stock subscriptions from the lumbermen have already exceeded \$30,000, and that the project is an assured success. The building will be devoted exclusively to lumber company offices, with the exception of the ninth floor and roof garden, which will be dedicated to the order.

An interesting note is found in the reorganization of the Malvern Chair Company at Malvern, which discontinued business some two months ago on account of alleged mismanagement. The new company is capitalized at \$100,000, and is known as the Cooper-Purdy Chair Company. T. H. Purdy, late of Philadelphia, an experienced chair manufacturer, is at the head of the new company as president, and Walter Bady is secretary. The board of directors includes H. L. McDonald, T. H. Purdy, J. L. Cooper, Walter W. Bady and J. H. Reaves. The plant has already resumed operations.

The Perkins Land & Lumber Company of Memphis has secured a charter to operate as a corporation in Arkansas. H. E. Perkins of Watson, Ark., is named as state agent and to have charge of the affairs of the company as manager of the operations at Watson. The company has about \$20,000 invested in Arkansas properties. Its main office is located at Memphis.

Railroad extensions are being planned numerously in the timber section of the state. A deal is on now for a general extension of the Memphis, Paris & Gulf railroad, from its eastern terminus at Murfreesboro, in Pike county, on through the central portion of the state to Pine Bluff, thence to Marianna and on to Memphis. This latter extension, from Marianna to Memphis, is to be taken up by the business men of the two cities the ensuing week. Work is also being done on a western extension toward Dallas, Tex.

Another extension planned, and upon which some contract work has been let, is that of the Pine Bluff & Louisiana, from Dollar Junction across Union county to a connection with the Crossett branch of the Rock Island, at Campagnolle, a distance of twenty-two miles and across a splendid timber belt.

Both the Rock Island and the Iron Mountain are carrying on big improvement enterprises in track betterments, amounting to hundreds of thousands of dollars. The Iron Mountain will spend \$100,000 in small passenger stations alone during the coming year, and will put over \$1,000,000 into track betterments in this state. Among its improvements, also, is an addition

to the car shops here that will practically double the capacity. The addition is 500 feet long by 150 feet in width.

## MILWAUKEE

Referee in Bankruptcy E. Q. Nye of Milwaukee has ordered a dividend of 10 per cent to be paid the creditors of the bankrupt Milwaukee Seating Company. The proven claims of the creditors amount to a total of \$31,000 and the trustee reported at the recent hearing that he has in his hands as proceeds realized since he took charge of the assets, a total of \$6,500. The company went into bankruptcy last fall.

News has been received in Wisconsin of the recent death at Ludington, Mich., of A. C. Cartier, a wealthy lumberman, formerly identified with the lumbering interests of northern Wisconsin. He was a resident at Ashland for several years.

A big run of orders for the new models of the Raymond log loader are being received by the Raymond Log Loader Company of Marinette. The Cleveland-Cliffs Iron Company has purchased several of the machines.

It is expected that logging operations in the Wisconsin lumber country will soon be brought to a close for this season, not because of unfavorable weather at the present time, but because conditions have been so favorable this winter that an unusually large cut has been made.

The plant of the bankrupt Reidling Piano Company of Plymouth has been sold by the trustee, Charles Voigt, to the Parlor Frame Company of Plymouth for \$5,000. The plant will be remodeled and added to the present quarters of the Parlor Frame Company.

Announcement has been made that more than \$75,000 worth of improvements will be made this year upon the Racine, Wis., plant of the American Seating Company. A brick and steel powerhouse will be added, new boilers will be installed and a new two-story dry kiln, 100x70 feet in dimension, will be erected. It is rumored that the company will also erect a new warehouse and office building.

The plant of the Automatic File & Index Company at Green Bay was destroyed by fire recently and an adjoining warehouse partly wrecked with a loss of \$15,000. An insurance of only about \$6,000 was carried.

A. A. Frazer has taken out a lease on the Wambold building at Appleton and will remodel the structure for planing mill purposes. Later, the manufacture of office and bar fixtures will be taken up.

The Hamilton Manufacturing Company, manufacturers of cabinets and wood type at Two Rivers, has taken up the manufacture of ticket racks and has been receiving orders from all the leading theaters of the country.

The Fond du Lac Church Furnishing Company of Fond du Lac has enlarged its factory force in order to care for its rapidly increasing orders.

The Gillette-O'Leary Company, a new wholesale lumber firm, has been organized at Tomahawk by F. E. Gillette and D. J. O'Leary.

## MINNEAPOLIS

Twin City building is just as brisk as ever, and Minneapolis building permits for the first two months of this year ran 57 per cent higher than last year. Minneapolis permits for February increased from \$300,745 last year to \$470,890 this year, while St. Paul increased from \$375,022 to \$543,706. Minneapolis for two months had permits estimated to cost \$1,073,285, and St. Paul for the same time had a total of \$898,298.

F. H. Lewis, who has been engaged in the wholesale hardwood business here for a number of years, is spending the winter vacation in

California. He is expected to be at home by the last of this month.

C. P. Coon of the Beldenville Lumber Company, Bruce, Wis., a well-known hardwood manufacturing concern, was here a few days looking over marketing conditions.

R. B. Thompson of the Thompson-McDonald Lumber Company, one of the veteran dealers of Minneapolis, has sold out his interest in the company and retired from business.

E. Payson Smith of the Payson Smith Lumber Company and L. P. Arthur, manager of the Chicago office, have finished a trip in Wisconsin where they were looking over some contracted stocks. Mr. Arthur remained in this city long enough to attend the annual meeting of the company.

## SAGINAW VALLEY

The lumber industry in this valley and eastern Michigan is in good form. There has been a steady movement of lumber all the winter, and it has increased, while prices have materially hardened, particularly on maple, birch and basswood. The winter has been on the whole favorable for logging, although in some of the northern localities the snow has been too deep for convenience. Despite this, however, a larger quantity of logs have been put in than during the last two years and operations will be brisk during the summer. Many sawmills have been operated at Bay City, Alpena, Cheboygan and other points during the winter, and a number of railroad mills are also turning out lumber. But the demand has absorbed all available stocks and large contracts have been made for stock to be cut. It is estimated that 60,000,000 feet of maple has been contracted for during the last thirty days, none of which has yet reached the saw.

The Johannesburg Manufacturing Company, operating on the Mackinaw division north of Bay City, sold 5,000,000 feet of maple to the Forman Lumber Company of Detroit to be converted into flooring.

W. D. Young & Co. are operating their plant day and night and are moving a large quantity of flooring by rail. Mr. Young says that business is brisk and satisfactory. Heavy shipments are being made for the export trade.

All of the hardwood plants are active at this time. The S. L. Eastman Flooring Company has bought the timber interests of the Prescott-Miller Lumber Company, operating a mill near Rose City, Ogenaw county, consisting of about 12,000,000 feet of timber. The mill at Rose City has logs to keep it busy about a month yet, when it will go out of commission. There will be considerable lumber to ship from the mill after it shuts down, and after that has been shipped the Prescott-Miller Company will wind up its affairs. The standing timber will be manufactured by the S. A. Robinson Lumber Company operating a sawmill near South Branch in the same county. Mr. Eastman is a heavy stockholder in the Robinson Company. This company has now more than 60,000,000 feet of stumpage. The maple lumber will go to the Eastman Flooring Company's plant at Saginaw for conversion into flooring. In addition to this the Eastman company has purchased 8,000,000 feet of maple lumber of the Kneeland-Bigelow Company at Bay City. This is to be manufactured during the season.

Five mills were operated at Alpena last season. The Richardson Lumber Company manufactured 2,550,000 feet of hardwood lumber. The Churchill Lumber Company manufactured 4,000,000 feet of hardwood lumber. The Island Mill Lumber Company manufactured 4,200,000 feet of hardwood lumber and the Beck Company manufactured 545,300 feet of hardwood lumber. The mill of F. W. Gilchrist is estimated to have manufactured 4,250,000 feet of hardwood lumber.

This gives Alpena a total hardwood output of 17,545,700 feet. All of the mills are being stocked, and one or two are now in operation. New boilers have been installed in the plants of Richardson Lumber Company and the Island Mill Lumber Company.

The Michelson & Hanson Lumber Company at Lewiston manufactured 10,369,000 feet of hardwood lumber last year. The mill will exhaust its timber and go out of commission in May next. The machinery has been sold to Louis Jensen of Salling and will be moved to Ontonagon county and set up, the owner owning a large quantity of timber there.

At Millersburg, S. F. Derry & Co. manufactured 7,299,944 feet of hardwood lumber. The mill has shut down and the firm is not lumbering to any extent this winter. It will have about 1,500,000 feet to cut in the spring. A portion of last year's cut is being shipped from the mill. Holmes & Nicholson have about finished logging in the Wolf Creek country near Alpena. They put in 1,000,000 feet of hardwood, mostly maple. The logs were manufactured into lumber with a portable mill right on the ground. A considerable quantity of the stock is birdseye maple.

Charles English put in 1,500,000 feet of hardwood near Alpena for the Island Mill Lumber Company of that place.

The Standard Hoop Company of Bay City operates a small sawmill in connection with the hoop and heading business. After five months' idleness the mill has resumed operations. The daily output is 120,000 headliners, 60,000 hoops and 20,000 feet of lumber.

A handle company is seeking through the officials of the Detroit & Mackinac Railroad Company a new location. The concern demands 600,000 feet of second growth ash annually and the certainty of a supply for ten years.

### CADILLAC

C. E. Chenevert of Defiance, Ohio, has finished the cutting of 1,000 pieces of hardwood timber for export to England. In addition, he has cut fifty pieces of square timber from pine to be exported, a rather unusual thing for this country. Mr. Chenevert has worked in Wexford county for three or four years.

There is still some good timber in the vicinity of Austin. John Stansell is shipping to the shipyards on the Clyde, via New Brunswick, three cars of rock elm logs of finest quality. None of the logs is less than 18 inches across the end and run from 12 to 32 feet in length. They are to be squared and used in ship construction.

The East Jordan Cooperage Company's dry kilns and stock was burned February 24, causing a loss of \$13,000. The kiln will be rebuilt at once.

The Charlevoix Lumber Company has completed its lumbering operations at Twin Lakes. It will run its Charlevoix mill another year to cut its up-lake timber.

It is stated at Lansing that the railroads are planning to attack the rate of taxation under which they are assessed by the State Tax Commission. There have been a number of conferences of railway officials relative to mode of attack who made a demand on the tax commission for copies of the proceedings of the commission in reviews of the general property which was refused.

Antoine E. Cartier, the pioneer millionaire lumberman of Ludington died March 1, as a result of acute kidney trouble. He was seventy-four years old. Mr. Cartier was identified with Ludington's early history, was a public-spirited man and mayor of the city in 1880 and 1881. He was president of the Northern Michigan Transit Company and head of the Cartier Lumber Company.

Frank J. Cobbs, vice-president and secretary

of Cobbs & Mitchell, Inc., and wife are spending the balance of the winter at Los Angeles, Cal.

Charles T. Mitchell, vice-president and manager of Mitchell Brothers Company has returned from a month's trip to the West Indies Islands.

Henry Ballou, superintendent of Cobbs & Mitchell, Inc., has returned from a three weeks' trip to New Orleans, La., Havana, Cuba, and other points.

Fred A. Diggins, Joseph Murphy and D. B. Kelley, prominent Cadillac lumbermen, have returned from a three weeks' trip to Texas.

Traffic on Lake City branch of G. R. & I., also Northport branch of same road, has been especially hindered because of the deep snow. One hundred men on each branch have been shovelling for several days to open up the tracks. The logging roads have also had their trouble in keeping their lines open. However, the thaw of the past few days has helped very materially in clearing away the snow.

Contractors having the job of decking logs for the Cummer-Diggins Company will have finished their work within a week or two. Edward Wing has decked 1,800M feet at Peru Siding without an accident to mar the winter's work, which is considered by woodsmen to be a sign that men are becoming more careful in woods work.

William Hayden will soon finish decking 1,500M feet of logs at McPherson, and Frank Skillet's contract for 500M feet at Peru Siding is about completed.

Tom Denton, of square timber fame, finished his cut of square timber at Mesick recently. He cut 1,200 pieces of excellent timber at Mesick; also 400 pieces in Henderson township on the R. G. Peters Salt & Lumber Company's land.

### GRAND RAPIDS

Fred I. Nichols of the Nichols & Cox Lumber Company, L. L. Skillman of the Skillman Lumber Company, and Charles Dregge of the Dregge-Grover Lumber Company have returned from the convention of wholesale dealers held at Cincinnati and report a very enjoyable time.

Z. Clark Thwing, manager of the Grand Rapids Veneer Works, reports that business is booming in both dry kiln and veneer manufacturing departments. The stock of logs in the yards at the present time is the biggest in ten years and the company is expecting to do a record-breaking business during 1910.

Otis A. Felger, secretary of the Hackley-Phelps-Bonnell Company, has just returned from a business trip through the South. He reports an improved tone in the hardwood market and a

better feeling. With a marked improvement in weather conditions, stock is moving much better and all desirable lumber is on a rising market. Cars are still hard to get, which is the one bad feature in the present situation.

"Business, in general, is very satisfactory," says E. F. Miller of the Engel Lumber Company, George Engel, president of this company, is now greatly improved in health and is able to work at the office and yards every day. The company has cut about two million feet of logs this winter in the vicinity of Floodwood siding, on the Pere Marquette road, in Clare county, and since its mill at this point was destroyed by fire last fall it will be necessary to hire the logs sawed.

"We shall be fully settled in our new building by the end of the month," says President Rice of the Rice Veneer & Lumber Company. "Business is picking up right along with us."

Henry S. Holden of the Henry S. Holden Veneer Company has returned from a business trip to the company's southern plant at Norfolk, Va.

The Wilmarth & Mormon Company, manufacturers of pulleys, drill grinders and factory tools, report a fine business. The shop equipment has been increased, with an increase, also, in the working force of about fifteen per cent.

The recent death of John Widdicomb of the John Widdicomb Furniture Company has resulted in reorganization of the company, with an increase in capital stock to \$500,000. The new officers are as follows: President, Harry Widdicomb, Jr.; vice-president, Ralph H. Widdicomb; secretary-treasurer, Burt A. Hathaway.

The Grand Rapids Car Loading Company, a private concern organized two years ago to handle carload shipments of furniture to distant points, has been purchased by the Grand Rapids Furniture Association, made up of the leading local manufacturers. E. L. Ewing, traffic manager for the association, will also have charge of the car-loading business in the future.

Marcus Schaff of the upper peninsula is Michigan's new state forester. He has just returned from a trip through northern Michigan and says that the first important question for the state to consider is the proper protection of its reserves from fires. Instead of planting more trees, he will urge the preservation of the trees that we now have.

George E. Donner of Cheboygan, who has completed a five-year lumbering contract for the Wylie-Buell Company, recently cut one of the largest elms known in that section. It measured six feet three inches across the stump and scaled 4,448 feet.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

The situation in Chicago is gradually getting back to the normal condition, most prices meeting those that prevailed before the panic and some showing considerable advance over any former figures. This can be said of quartered oak and the higher grades of birch especially. Owing to the enormous demands of some big Chicago companies, as well as to the increasing popularity of this wood, the upper grades of birch are exceedingly short and will continue to increase in value until checked by their own high price.

Air-dried birch is quoted at from \$38 to \$40 in firsts and seconds. The fact that a large amount of stumpage must be cut to supply the demand for high qualities results in overproduction of the low grade stock, hence the prices on low grade are not as high as might be expected. No. 1 common is worth \$24, No. 2 common bringing \$18.

Quartered white oak brings an average of \$80, and no good substitute has yet made itself evident. This figure shows a slight inclination to decline on the part of quartered oak, the falling off probably being due to the increase in price, which has already reached a figure beyond the means of many people.

Upper grades red oak are still in good demand, but few firms reporting a full stock. Firsts and seconds inch plain white oak are listed at about \$60.

High-grade hickory plank for wagon stock sell in this market for as much as \$55, the supply being commensurate with the demand.

Following prices prevail for cherry in the Chicago market, eastern and western stock being included: Firsts and seconds are worth from \$75 to \$80; No. 1 common, \$40 to \$45; No. 2 common, \$22 to \$26. Indications are that the prices on the better grades of cherry used for fine cabinet work will continue to increase until, as with other similar woods, they

have been placed it beyond the reach of the ordinary individual.

While good basswood is in very good demand and prices all that could be expected, the lower grades are still pretty unsteady.

Walnut shows the usual healthy condition, the best grades bringing from \$85 to \$95, depending on the stock. No. 1 common is worth from \$40 to \$50; No. 2 common from \$20 to \$25. Stocks are fairly plentiful.

Three-inch first and second maple is selling locally as high as \$40; one-inch stock showing a commensurate value of \$33. While the demand is excellent, thus far there has been no difficulty encountered in filling orders.

The elm market shows no appreciable change, quotations for the last month remaining in effect.

The first four grades of cypress are selling for \$45, \$40, \$30 and \$22.

The opening spring building trade has boomed the hardwood flooring business to a considerable extent, prices being favorable and orders excellent.

### NEW YORK

The hardwood market at New York shows a much better tone all along the line with the opening of spring. There is more activity noted among the retail mill work dealers, many of whom report a better trade for the year thus far than they enjoyed even in the late summer months, and the general feeling prevails that the spring season will produce a large amount of desirable business in all consuming lines. This activity on the part of buyers and consumers is being reflected in the wholesale market, and hardwood stocks of all kinds are moving more freely in all branches of the trade. The chief difficulty which seems likely to concern the spring trade will be in the matter of supplies, particularly good-grade lumber. Stocks are short at mill points which with the large increase in demand is keeping wholesale buyers scurrying in order to pick up their requirements, and there is no question but what the next sixty days will see prices moving up on a higher range of values, especially on good-grade lumber, with a very fair promise of low-grade moving up in sympathy. Taken as a whole, the general situation seems to be very promising for the hardwood trade for the spring and early summer.

### BUFFALO

The main question with the lumberman is where to get stock enough to meet his sales. This state of things has been true for quite a long time in the straight hardwood trade, but now that other woods have been added it remains quite as true. It is easy to push side woods so that they will take the place of certain hardwoods, but they do not always promise to last any more than hardwoods themselves do. One hardwood firm reports that it has sold a million feet of cypress this year and others are going into yellow pine.

Buying is as brisk as ever. As one of the dealers says, if anyone has any stock he is a very poor salesman if he cannot sell it. In most hardwoods the best market is for common and better, but if one has oak, chestnut, elm, basswood or maple he can sell it without much effort. A few of the dealers with southwestern mills behind them are now saying that they have some quartered oak in sight, but others say that there is a prospect of chestnut giving cut almost as completely as birch has done, and if it does it is going to be hard for the oak, as chestnut has been put in to replace it a good deal of late.

There is a big demand for maple, and white ash is doing decidedly well, but a dealer who

tried to pick up some black ash here the other day says he could find but very little.

### PHILADELPHIA

The first part of February showed a falling off in hardwood trading, but of late there has been a manifest improvement, and hardwood dealers are more encouraged over the outlook. However, there is no gainsaying the fact that there has not been the acceleration in the lumber business or in business generally that was predicted in the early winter, which nonfulfillment of promise to a wide extent is the result of the frequent storms, which have naturally interfered with prompt shipments. Railroads have been blocked and, in consequence, the unloading and transportation of merchandise has been accomplished only at an exceedingly advanced cost; in many instances a cancellation has been unavoidable, or at best a most undesirable delay in deliveries.

The hardwood end of lumber on account of the scarcity of stock at the mill centers has held firm prices, and orders are coming along more freely. The strikes in Philadelphia and in the near territory have hampered in no small degree and naturally had a disquieting effect upon the industries generally.

### PITTSBURG

If the hardwood business does not show a big gain in the next thirty days, every wholesaler in Pittsburg will be greatly disappointed. A gain was expected in February. No doubt it would have materialized had it not been for the extreme cold weather, the shaky condition of Wall street and threatened labor troubles. The first objection is now removed. The second is fast disappearing and the third, while still present, is not likely to seriously affect this district in the light of present prospects. On the other hand, conditions are steadily shaping themselves now for a good spring trade in hardwood. Building projects which have been on the boards for months are beginning to be let. Retail yards are once more moving stock out to contractors and builders. Big jobs of railroad and construction work are being started or resumed and purchasing agents have been ordered to secure quick deliveries of lumber. Inquiries are much improved and there is a general scarcity of stock at the mills.

Prices of hardwoods have held remarkably steady considering the unfavorable conditions which the market had to compete with. In fact, there have been no reductions. In several lines, such as white oak, hickory, ash and walnut, higher prices have been paid during the past six weeks than for two years previous. Stocks of these woods have been at practically low point for the past twelve months and shrewd buyers are coming into the market with all speed to corner any good lumber which can be secured for early spring delivery. It will take many of the country hardwood mills from sixty to ninety days to get square with their shipments already ordered and this will help to put a bulge on prices in April and May.

### BOSTON

The feature of the hardwood market continues to be the strength displayed in all sections of the country, and this without an active demand. Just an ordinary business is all that can be reported with possibly a few exceptions. No manufacturer is trying very hard to force business. Buyers admit the strength of values and state they cannot buy on as favorable terms in some cases as they could a few weeks ago. Although the general demand is not heavy at present, most dealers entertain cheerful views of the future. They believe the spring business will be satisfac-

tory, even with prices high. The lower grades of hardwoods are coming in for more attention. Retailers in this section are carrying moderate-sized stocks and offerings of dry lumber are not large. Automobile manufacturers are busy. A report from one of the largest makers shows their product for 1911 is practically sold at this time and another company plans to produce a thousand cars a month for the next year. Many mills have been handicapped for several weeks by the weather. Veneers are in better demand, with offerings of fair size.

A very firm market is reported for quartered oak and prices are higher. A leading wholesale dealer stated this week that it is not safe to take an order unless one owns the lumber, as it is very difficult to find mills in a position to accept prompt delivery orders. Plain oak is also very firmly held, with stocks far from burdensome. Maple flooring continues firm at the recent advance and prices tend upward. There has been an excellent export demand. Basswood has been attracting quite a little attention in this market. There has been no abatement in the strength of the market for cypress. Manufacturers continue to insist upon full asking prices, which in many instances show an advance. Whitewood is also well held. Ash and birch are firm. A moderate demand is reported for North Carolina pine.

### BALTIMORE

Though developments in the hardwood trade during the past week have not been of special moment, the movement continues to increase steadily and has now attained a fair volume. The numerous interferences with operations at the mills have restricted the output until it has fallen rather below ordinary proportions, while the demand has been sufficiently active to take up all the stocks offered, the result being that the mill men are enabled to ask and obtain satisfactory prices. With the exception of some eastern points, which salesmen have apparently visited in inordinate number, the trade seems to be in good shape, yardmen buying with considerable freedom, and showing a disposition to meet the terms of the manufacturers. Low-grade stocks, say some of the hardwood men, are offering with rather more freedom than is conducive to acceptable returns, but even in this respect the situation is stronger than it was some time ago.

Of note in the local building world are the proposed million dollar hotel in the center of the city and the addition to the Fidelity and Deposit Company's building, which will cost more than a million. These and other structures will consume large quantities of fine hardwoods, and will contribute to the improvement in trade conditions to be looked for. The railroads and furniture manufacturing establishments are in the market for lumber of all kinds, and the yards are preparing to take care of unusually large wants. Much uncertainty still prevails regarding the foreign situation, but the tendency appears to be toward a better demand, with higher prices. From some of the foreign centers large accumulations are reported, while in others the selection is not as free as it should be. At any rate, the foreign buyers show a willingness to forego some of the conditions which they insisted upon very strenuously not so long ago, and exporters have been asked to bid in a number of big orders. In view of all the circumstances the mills feel warranted in pushing operations as much as possible. It seems now as though there would be room for all the lumber that can be produced.

### CLEVELAND

The Cleveland market here seems to be strengthening considerably, the call for the higher grades especially being better during the

past month. Dealers here look for a big business during the spring and summer months, especially in the building line. The hardwood flooring business is constantly improving.

Poplar in wide widths still holds the center of the limelight in the manufacturers' field. The auto body companies can't get enough of it. Both quartered and plain oak are in good demand. The call for other lines of hardwoods, however, has not increased much above the normal as yet.

### COLUMBUS

The brighter weather which prevailed during the early part of March had the effect of increasing the demand for all varieties of hardwoods in Columbus and central Ohio. Prices have shown more strength under this influence and everyone connected with the trade expresses an optimistic view of the future. Manufacturing establishments have continued to operate steadily and their orders for materials have been slowly increasing. The same is true of the demand from the yard trade. There have been no declines in any variety or grade and the whole tendency of quotations has been to advance. It is believed that with the breaking up of the severe winter the hardwood market will become stronger and the sales will be larger. A car shortage together with a lack of motive power on some of the railroads having southern connections have been about the only drawbacks to the markets. Shipments have been delayed as a result in some quarters. Bad weather has also prevented the movement of stocks from the mills to the railroads.

The demand for quartered oak continues to increase, which with a limited supply keeps prices to the high point. There is also a good demand for both red and white oak. Poplar is one of the strongest points in the market and prices are firm. Wide sizes ranging from 24 to 27 inches bring about \$145 at the Ohio river, and sizes ranging between 18 and 24 inches \$125. Ordinary sizes are also strong in all grades. Chestnut is one of the steadiest woods on the market, with prices stronger. The same is true of ash, which has recovered from its weakness of the midwinter season. The demand for basswood is steady. Hickory is in good call. Hardwood flooring is now attracting more attention and the entire list shows a tendency to improve.

### TOLEDO

Oak, both plain and quarter-sawn, continues to lead the local hardwood market. According to reports from local concerns there is no trouble in selling all the oak to be had at fair figures. The poorer grades of poplar are plentiful and a trifle weak at the present time, but the better grades are strong. Inch stuff in widths from fifteen to twenty inches has recently moved at about \$70, while widths ranging from twenty-four inches up are selling from \$125 and over, depending much upon how badly the buyer wants it and how badly the seller wants the money. In fact, no regular price can be named for poplar that is suitable for automobile bodies. High-grade birch is scarce and not only is the local supply very limited but shortage is reported from the mills. Prices have advanced in some instances as much as \$4 since the first of the year, and the price tendency is all upward at present. Boxing materials continue to enjoy an active demand, and while the supply is abundant, prices are holding up well. Factory demand for all kinds of hardwoods is normal, and hickory, oak, ash, chestnut, birch, beech and even elm are finding ready sale. Dealers are still inclined to buy heavily and have lost none of their confidence in the prospects of the coming season. Shipments are coming in more promptly, but there is still some trouble in the Michigan district, and hardwood consignments

from that section are badly belated. The hardwood demand from the building end of the business has picked up considerably during the past few days and a number of large contracts which have been closed will supply a market for large quantities of various kinds.

### EVANSVILLE

The market continues good and it is certain the pleasant weather now prevailing will make March a big month in the lumber business, as quite a number of local dealers were behind with shipments on account of severe weather conditions. Mills are now running steadily, having plenty of logs to run on until the logging season opens up a little later. Local factories are having a good business at present, some being behind with orders. The call for poplar is still good with prices improving. Plain oak is in brisk demand, as is ash, especially in the common grade. Quartered oak, both red and white, enjoys its usual activity.

### INDIANAPOLIS

The spring trade has opened up nicely, now that winter has broken and the thaw is over. Hardwood manufacturers and dealers say they have some most satisfactory orders on their books and that there is more business in sight.

Manufacturing concerns using hardwoods are all running full time and are placing some orders, although many of them seem to be well stocked from last fall. Prices are practically unchanged, with the principal demand for all grades of oak and poplar.

### MEMPHIS

Lumber interests here continue to take a cheerful view of the outlook. Business in domestic circles is good and there has been considerable improvement in export business during the past few weeks. In fact, some of the exporters here take the view that business in their lines will be very good this spring and summer. Lumber interests have had considerable difficulty in operating their plants during the past few weeks because of continued sleet, snow or rain, but the way appears to be entirely clear for them just now. Manufacturing interests do not attempt to conceal the fact that they are manufacturing lumber as rapidly as possible. They state that conditions have improved to such an extent that they are thoroughly justified in this course and they furthermore declare that it is necessary for them to continue in steady operation if they are to have enough lumber ahead to meet the requirements of the late spring and early summer trade. Salesmen on the road are reporting very satisfactory business and orders taken by mail are of good proportions.

There is a splendid demand for high-grade oak and ash and a good movement is noted in the upper grades of cypress. Cottonwood is moving more readily in the higher grades and both firsts and seconds red and sap gum are in good demand. Red is very much wanted, especially in stock two inches thick, the supply of which is very light. Red gum is bringing better prices now than for a long while and the supply on hand is none too large. Cottonwood box boards are particularly firm and offerings are comparatively small.

The excellence of the demand for box boards made of this lumber has led to increased inquiry for gum box boards. There is not much poplar for sale in this market and what is offered is readily taken. Low-grade ash and oak move well and there is also a very good demand for shops and selects in cypress. The lower grades of cottonwood and gum are improving in tone and there is decidedly more business under way.

**SPECIAL 30-DAY SUBSCRIPTION OFFER TO HARDWOOD RECORD READERS.**

The Hardwood Record

Regular Subscription - \$2.00

The Woman Beautiful Magazine

Regular Subscription - \$1.00  
\$3.00

**BOTH FOR \$2.00**

For one full year

By special arrangement with the publishers, Hardwood Record is able to make this special offer to its readers.

You know what Hardwood Record is—the best lumber paper published.

Something about The Woman Beautiful Magazine, "Written by women for women." Edited by Idah McGlone Gibson

A monthly magazine containing many clever articles of decided interest to all women. Devoted to the cultivation and preservation of womanly beauty. Every number contains 8 full page portraits of beautiful women of the stage, printed in colors, together with 50 and more pages (superbly illustrated) of fashions, beauty culture, hints on the care of the hair, skin, face and hands—London and Paris correspondence—many articles of literary merit and in all, a woman's magazine from cover to cover.

This special \$2.00 subscription offer good on new or renewal subscriptions. Present Hardwood Record readers can take advantage of this offer by extending their subscription one year. Send your order today before the time limit expires; or send 10 cents (coin or stamps) for specimen copy of The Woman Beautiful.

Numbers one and two common red gum are in good request, but the lower grades of sap gum do not move quite so readily.

#### NASHVILLE

General satisfaction over the business for the month of February just passed is expressed by the Nashville lumbermen. In fact, it is frequently stated that it was the best February for several years past and at least fifty per cent better than February of 1908. Prices are regarded as satisfactory and the movement of timber is active enough, especially in the upper grades of poplar, oak and ash. Some of the dealers seem to fear the nightmare of scarcity of stocks in the future, while others are not so much afraid of it, knowing that scarcity of stocks means better prices, according to the law of supply and demand. Admittedly at this time, however, dry hardwood stocks of the good grades are scarce, and such stocks are broken as well. The recent heavy tides in the Cumberland have caused liberal receipts of logs. The local mills are quite busy filling their numerous orders. Heavy demands on the part of the railroads for construction material are reported. Some improvement is noted in low-grade hardwood stocks. Gum is in this list and cottonwood. The local dealers are all looking forward to an active spring trade in all departments. Reports reach them that stocks in the East are scarcer than usual and this in turn affects the local demand.

#### BRISTOL

With a few weeks of good weather, which now seems probable, after some months of the roughest this part of the South has ever experienced, hauling from country mills will begin and this will greatly add to the supply from this section. However the rural mills have done very little during the winter. There is a great scarcity of the higher grade stocks in the yards of this section, while several bandmills that have been closed will be started again. Several smaller mills are being installed. The railroads report traffic heavy and indications are that there will be much activity in business generally, as well as the lumber business, during the spring and summer.

#### LOUISVILLE

Although the low grades of hardwoods are still rather sluggish, the upper grades of nearly all items on the hardwood list are in much better demand than at any time since the opening of the new year. The demand is strong, with a tendency toward considerably higher prices. The fact that the severe winter made it impossible for the mills to begin operations until late has decreased the available supply of dry lumber, and those with large stocks are congratulating themselves. Calls for quartered oak and plain oak are coming in volume from the furniture factories and the planing mills, while the automobile body manufacturers continue to repeat orders for the best grades of wide poplar. Mahogany, owing to heavy building operations in the cities and the activity of the car builders, is in strong demand, while veneers are being bought in larger quantities than ever. The general line of hardwoods and allied industries are in splendid condition.

#### ASHLAND

Manufacturers are not receiving the amount of timber they had expected on the recent tides and are becoming somewhat alarmed for their timber supply to keep their mills going this season. Most of them have received a fair

supply, but nothing compared to what they have received in former years up to this time. The demand for lumber continues to increase and inquiries as well as orders are plentiful. Buyers are experiencing trouble in finding dry stock to satisfy their wants. It is the opinion of manufacturers here that the next six months will find the supply of dry stock very scarce, much more so than at the present time, with prices considerably higher.

High-grade stock is moving very freely, with prices getting better. The lower grades also are becoming more active than they have been for the past two years. The mills which make a specialty of car stock and planking report the receipt of orders, some of which have had to be refused. Prices on this stock have materially increased the past sixty days and there is every indication of a still better price. Poplar panel stock continues to soar very high in price and the supply very much limited in dry stock. The box manufacturers are buying very freely of the No. 3 common and box grade poplar which has been very slow on the markets for two years.

#### ST. LOUIS

The local hardwood conditions during the past couple of weeks have been rather quiet, owing to the general weather conditions. Cold weather has prevailed nearly everywhere in this territory. However, a good many sales have been made. Prices are quite firm on high-grade lumber and low-grade stuff is also firmer than for some time. The demand, too, for the latter has improved. The items most in demand are plain sawed white oak and quartered red oak, both in the upper grades. High-grade ash, first and second red gum and cottonwood are all in good demand. Buyers seem inclined to hold back orders, hoping for slightly lower prices, but those best informed state that instead of a weakening in price, there will be a stiffening. The factory and shop demand is improving. Inquiries are coming in from retailers very freely and the general outlook is excellent for a good spring trade.

#### MILWAUKEE

The inability of the railroads to furnish sufficient number of cars to meet the demands of the trade and the general slow movement of freight is causing considerable inconvenience to the general lumber trade of Wisconsin. The general tie-up means much at this time of the year when the near approach of the building season necessitates the placing of large orders.

While retailers are proceeding carefully about ordering stocks because of the traffic situation, excellent inquiries are being received by jobbers and every indication points to a busy spring trade. The brightest feature of the Milwaukee situation is the fact that factories in general are placing larger orders daily. The sash and door plants are now operating at full capacity in preparation for the building season and finishing and hardwood flooring establishments are all busy. Furniture manufacturers are all laying in good stocks also.

Low-grade stocks are in much better demand than they have been for some time. Plain and quartered white and red oak is wanted, as usual, and the supply of better grade stuff is getting low. Higher grade birch, poplar and basswood have advanced. Considerable improvement is taking place in hardwood flooring.

#### MINNEAPOLIS

Wholesale dealers here complain that their country trade is held back by inability of the railroads to furnish cars. Their trouble is all with carlot orders, as under present conditions

the roads are rushing the higher class freight and making lumber wait. When hardwood stock is sent in small quantities and at less than carload rate, it is delivered with fair promptness. The demand is fairly good from outside towns for flooring and wagon stock, and good prices prevail.

City trade continues fairly brisk from the factories, and is limited chiefly by the available supplies of factory hardwood. Oak from the South is taking an active place in present transactions. No. 1 and No. 2 birch are so well cleaned up that it is not so much a question of price as whether the stock can be obtained. Basswood uppers rule very strong. Maple flooring is selling well on advanced prices. There is a better situation with regard to low-grade stock. The box demand has improved to such an extent that prices are getting stronger on the low grades of pine. This has helped hardwood culls somewhat. A good call is reported for birch culls. Basswood culls are about out of the market.

### SAGINAW VALLEY

The market is strong and prices very firm with an upward tendency for some grades and these are much higher than last season. Sales have been so free that there is no excess accumulation of dry stock and lots of lumber has been sold to be cut, particularly maple. No. 3 has been sold up close to an advance of about \$1 per thousand feet. Lumber is moving freely. A large quantity of maple flooring is being shipped out. The stock of available basswood is small and dealers are asking here \$27 and \$32. No. 2 common maple brings about \$22 and \$25 and the trade would take more than is being offered at the moment. There has been less doing in beech than any other hardwood commodity. The market is strong for birch and sales have been reported at \$23 and \$26. Elm is moving fairly well at \$26 and \$30, a lot of it being used for auto and carriage bodies. The limited quantity of ash in manufacturers' hands is quoted at \$32. Trade conditions are good and there is much confidence in the situation. Some firms at mill points north of Bay City have not shipped as much as they would have, had cars been available.

### CADILLAC

Lumber trade conditions in Cadillac are normal with many inquiries for maple and birch upper grades which cannot be furnished because of shortage of dry stocks. Generally the stocks of all dry hardwoods are low, including No. 3 common. Hemlock is moving but slowly. Weather conditions in this vicinity have hampered the moving of traffic and, consequently, a very small proportion of the orders have moved the past two weeks.

### LONDON

The London hardwood market can only be described as dull. The last arrivals from Philadelphia and New Orleans consisted of the usual parcels of whitewood, black walnut, oak and satin walnut with some hickory logs. It is very difficult to effect business for forward shipment, and although exporters are anticipating a still further rise in values, buyers are holding off. The scarcity in America of prime whitewood is beginning to be felt here and any prime stock that comes forward is quickly picked up. There is a slightly better demand for clear saps and medium, but culls are weak. In quartered oak the volume of business is limited, owing chiefly to the high prices quoted by shippers, but plain oak is in fair demand. There is a steady call for medium satin walnut, but prime

is slow of sale. Black walnut has been in poor request for some time now. Business in mahogany still continues on somewhat restricted lines.

### LIVERPOOL

The trade here is gradually settling down, after the disturbance of the general election, though many people of both parties regret the indefinite nature of the result. Shippers, however, need have no fear of the "Tariff Reform" policy being introduced by this parliament, at any rate, though it is generally considered that the present parliament will be short lived. Most people look for an election in twelve months time, when the danger to shippers of new duties on manufactured hardwoods will be more serious.

Business in England is not too good at the moment, though it must be said that it is improving. The hardwood position is distinctly firm. Oak planks, both wagon and coffin, are in much request, especially prime quality, and even the usually unsalable "rejects" are finding a fair market. Ash planks are particularly strong and shipments, especially of No. 1 common, in all thicknesses would find a ready sale. Ash logs are still strong and commanding high prices, especially second growth wood. The latter is easily commanding fifty-four cents per cubic foot on the quay here. Hickory is still scarce, in spite of the heavy arrivals. Prices realized have been very high and buyers are still scrambling for stock. The demand for hickory has never been so large as at the present time and shippers are advised to send all their available supplies to this market. The prices obtained will repay them. The mahogany sales of February 16 and 17 were attended by a large number of buyers, and prices realized were much higher than the last average. It is thought that prices will go even higher at the next sale.

### OAK FLOORING

An artistic volume by Henry H. Gibson, editor Hardwood Record; 40 pages, in colors, on heavy India tint paper; tells all that's worth knowing about Oak Flooring, its hygienic qualities and low cost; as well as the proper finishing and care of oak floors.

Profusely illustrated, an ornament to any office or library table; contains no advertisements, and constitutes an authoritative text-book on this important subject. Of special interest to architects, builders, house-owners and women. Price 50 cents. A limited number have been purchased by leading oak flooring manufacturers who authorize distribution FREE (until supply is exhausted). Copy will be sent on receipt of 10 cents in 2c stamps to cover cost of packing and mailing. Address quick: Book Dept., HARDWOOD RECORD, 355 Dearborn St., Chicago.

## INSURANCE COST

As a lumberman you carefully analyze the cost of your stumpage, manufacture and sales, but your insurance is usually bunched with "general expense."

We can convince you that fire insurance is worthy of even more careful analysis and attention than any other feature of your business.

We can also convince you that our form of insurance is the safe, logical and economical one.

Will you give us an opportunity to prove our claims?

11	Gum	20	Veneers and panel stock

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago

## A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances without adjustment. It has many other good features, but we've no more room to describe them.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

No. 35 SINGLE SURFACE PONY PLANER

Planes 24 inches wide and 6 inches thick. Table slides on outside of frame so it is steady and the work will not be wavy or have clipped off ends. Two rates of feed driven from cylinder, one regulating the other.

MOST PERFECT

## DOUBLE HEAD DOWEL MACHINE

These machines have two spindles running side by side, both spindles operated at the same time and by the same operator. Double No. 1 cuts from ¼-in. to 1-in. diameter; double No. 2 cuts up to 2-in. in diameter; double No. 3 cuts up to 3-in. in diameter. These machines are designed for the rapid production of round rods for all purposes, and have a capacity of 7,000 feet per hour and larger when required. Waste stock and every grade of stock may be turned without danger of it twisting off or clogging in the cutter head.

## THE SHERMAN FLOOR BORING MACHINES.

The Standard Side Boring Machine, shown herewith, can be attached to any machine to bore flooring run face down, and to belt from above or below. It has a slide so that drill head may set at any point along the matcher roll and for different widths of strips.

The manner of lubrication is entirely satisfactory and so arranged that grease is forced through entire machine by one grease cup and thoroughly lubricates every gear and bearing in the machine. There is a continuously revolving thrust bearing ring that takes the thrust from all bearings. This insures perfect lubrication, long life and easy replacement.

Drills don't break off inside this machine. The spindles project through the outer ring and the drills are screwed into the spindles. This construction admits of drills being

always easily and quickly removed or replaced by the use of pliers. No parts of the machine project in such way that they are liable to be caught by crooked strips of flooring being fed through matcher, thus providing against machine being forced from its fastenings and broken.

There are a number of other interesting features about this machine we shall be glad to tell you about. Write us. We also manufacture the Sherman End Matchers and Face Boring Machines for flooring.

## PACIFIC COAST

We employ a **larger** force of **expert** timber cruisers than any other firm in the **world**. We have furnished **banks** and **trust** companies with reports on timber tracts upon which **millions of dollars** of timber certificates or **bonds** have been issued. We furnish **detailed** estimates which enables the buyer to **verify** our reports at **very little expense** and without loss of **valuable time**. Correspondence with bona fide investors solicited.

**NEW YORK SAW WORKS**

THE ONLY PRACTICAL MACHINE FOR HANDLING PRESENT DAY STYLES IN FURNITURE TURNINGS

IS THE

## Mattison No. 5-7

No matter how complicated or delicate the pattern—

No matter how deep the cuts—

No matter whether back posts are bent before turning—

No matter if turned parts are built out larger than the squares—

No matter whether the Design is Round, Square, Octagon, Oval or any Polygonal shape—

No matter whether the diameter is 1 inch or up to 18 inches—

This machine will do the work, do it absolutely smooth, and perfect in shape and size, better than can possibly be done by hand, and at a fraction of the cost of Hand Work. If you make Turnings of any kind, let us tell you what the machine will do for you. Asking for information places you under no obligation. Write today.

**C. MATTISON MACHINE WORKS, 897 5th St., Beloit, Wis.**

## BUTTING SAW

for

**Flooring Factories**

For cutting out defects and making square and smooth ends for end-matching machines. Used by the largest producers. Write for particulars and prices.

**Cadillac Machine Co.**

CADILLAC, MICH.

# OUR NEW TRIPLE-DRUM SANDER

is designed to meet the highest requirements in furniture, piano and wood working shops of all kinds where a perfect surface is wanted, either for varnishing or painting.

Many excellent features are illustrated and fully described in our New Sander Book.

**WRITE FOR IT TODAY**

New No. 225 Triple Drum Sander. Has Automatic Take-Up Drum

**J. A. FAY & EGAN CO., 414-434 W. Front St., CINCINNATI, OHIO**

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address:

**THE SINKER - DAVIS COMPANY, Indianapolis, Indiana**

## Results Are What Count

A combined skidding and loading machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results.

The latest Russel Machine has some distinct improvements that save time, trouble and money.

The skidding sheaves are hung from a vertically hinged jib the outer end is gauged by two power tightened lines.

An all-steel machine which has special features that absorb all

shocks and strains. Rapid in operation and setting. Swinging boom easily controlled by one lever. The machine is raised or lowered by hydraulic or patented geared jacks. Built for 2 or 4 lines. A machine that will interest you; because it is the fastest and strongest of the day.

## Russel Wheel and Foundry Company DETROIT, MICHIGAN

**High Daily Averages** in skidding depend principally on initial capacity and the degree to which the skidder can be operated to that capacity.

**The Clyde Self-propelling Steam Skidder** is absolutely independent of loading and is never held back nor its full capacity interfered with by any loading conditions that may exist. Full capacity is therefore possible when conditions are favorable and the hauls are short thus insuring a surplus of logs to compensate for those days when conditions are unfavorable and the hauls are long.

With the independent and separate loading unit, the loading crew may then be pushed to its fullest capacity at all times assuring a uniform daily flow of logs to the mill. It is self-propelling, can move frequently without loss of time and sets quickly because of its special steam guying device.

# THE BEST THREE DRUM SANDER

No. 400-C TRIPLE DRUM SANDER

A SANDER that produces a volume of output from 200 to 600% more than any other sander now built.

What a recent purchaser in Muskegon states:

"The Smith Sander will do the work of three sanders and the operator will have time to take a nap between times."

The **Traveling Bed** feature allows the operator to feed stock as small as 3 inch square and  $\frac{1}{16}$  inch thick, side by side, even if the pieces are of slightly different thicknesses. And the machine will do some classes of work not possible on any other sander.

The **Drums** being **over** the work assist in lifting the dust into a hood overhead so that none of it passes through the machine or working parts.

# CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

*Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

## RED BOOK

Published Semi-annually  
in February and August

It contains a carefully prepared list of the buyers of lumber  
in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of  
meeting obligations. Covers the United States, Alberta, Mani-  
toba and Saskatchewan. The trade recognizes this book as the  
authority on the lines it covers.

A well organized Collection Department is also operated and  
the same is open to you. Write for terms.

## Hardwoods for Immediate Delivery

Prompt Shipment is more than a trade phrase with us—it is an actual fact. If you use the telegraph (our expense) we can answer your inquiry, quote you, sell you and ship the lumber all in two days' time—sometimes the same day.

## O'NEIL LUMBER CO.

King's Highway and Manchester Ave., St. Louis, Mo.

## CHECKING, SPLITTING, ROTTING POSITIVELY PREVENTED

by LORAC, a thick liquid, to be applied to either timber or lumber at a trifling cost. It will not discolor or injure the wood, neither will it interfere with its subsequent working or painting. It requires no preparation before use, no heating or mixing, and is easily applied by unskilled labor.

Ryan-Stimson Lumber Co., Memphis, Tenn., writes us July 21, 1909: "The Lorac Protector we received seems to be doing pretty well. Please ship us at once another barrel of 600 lbs."

The Florence Pump and Lumber Co., Memphis, Tenn., writes July 6, 1909: "The Lorac Protector we recently had from you was all that could be asked for, and works splendidly, preventing the ends of squares from checking. Send us two barrels of 600 lbs. each."

Dec. 18, 1909: "Please send us two barrels of Lorac, about 600 lbs. each."

L. A. Schwarzwaelder, Chichester, N. Y., Manufacturer of Bank and Office Fixtures, writes us under date of Aug. 9, '09: "I have given your material a trial on some lumber, and find it has fulfilled all that you claim for it. Please ship me a barrel of 600 lbs. at your earliest convenience."

Herr Lange, Chief Forester, The Bismarck Forestry, Friedrichsruh, Germany, writes: "As your Lorac Protector has shown excellent results on Beechwood, we request that you send us immediately additional 500 lbs. of the same."

# Linderman Automatic Dovetail Glue Jointer

To the woodworker who weighs the cost of Jointing Lumber and the value of his finished product the LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER offers a method that eliminates the operations necessary to complete a glue joint as jointing, glueing, clamping, unclamping and edging the jointed panel to width, combining the five hand operations into One Automatic Operation with a

## WEDGE DOVETAIL JOINT

which has proven by practical tests to be stronger than a flat joint because it allows the glue to stay in the joint until the tapering wedge Dovetails draw the lumber together which forces the glue into the pores of the wood welding it with a permanent clamp.

# CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

☐ For more than thirty years the manufacturers of lumber at Cadillac have conducted business on one definite policy.

☐ In brief, that policy has embraced a source of timber supply of the best in the state of Michigan; the employment of the highest class of workmen and best machinery in the manufacture of their lumber and flooring; the exercise of exceptional care in the seasoning of stock, infinite pains in grading and painstaking attention to the requirements of every customer.

☐ The result of this policy has been Cadillac Quality and Cadillac Reputation for Satisfactory Dealing.

☐ If you are not a Cadillac partisan, it will be to your interest to get in line. Be friendly—write us.

# Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock **THAT IS IN SHAPE TO GLUE.**

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. **THE GLUE WE USE IS GUARANTEED HIDE STOCK.**

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed **THE BEST.**

PHILIPP, MISS.

# R.E. Wood Lumber Company

☞ Manufacturers of Yellow Poplar, Oak, Chestnut, Hemlock and White Pine.

☞ We own our own stumpage and operate our own mills.

☞ Correspondence solicited and inquiries promptly answered.

GENERAL OFFICES:  
CONTINENTAL BUILDING.

Baltimore, Maryland

# **"Sure-Fit" Flooring is made by the Foster-Latimer Lumber Company, Mellen, Wis.**

They have as complete a hardwood flooring plant as any in the world. The machinery they use eliminate handling more than the majority of mills of that character.

"Sure-Fit Flooring" is their trademark.

It means that the flooring not only fits perfectly but is of perfect manufacture throughout.

They put that brand out because their product speaks for itself. It gets repeat orders because of its quality.

And other brands like the "Eureka," "4 L Co.," "Acorn

Brand" and "Licking River" are manufactured on the same machines.

These machines are Berlin Hardwood Matchers, fast-feed type with thin knife equipment.

They use the Pyts Steel Knives, our own development, and turn out a product that sells on its merit.

They turn out flooring at a lower cost because their equipment is of the latest type.

We are proud to have them as customers.

## **Berlin Hardwood Matchers**

have features not found on any other machine. We have made a study of hardwood flooring manufacture.

We know how each different stock should be handled. We know the right bevel for each wood.

Our grinding and jointing devices for cylinder and side-heads keep the knives in a perfect cutting circle.

Our Reverse Feed Device prevents stock from spoiling the side-head setting.

You will find this a feature distinctive of our machines.

The other day we received a letter from the Superintendent of a new hardwood flooring plant just started. Read it—it is written because he meant what he said.

"I send you herewith two samples of Oak Flooring run on the

89-X at 90 feet per minute. When I say 90 feet per minute I mean that actually 90 feet of stock passes through in 60 seconds by the watch. In other words, a practical test.

The machine will do as good work at 125 feet per minute, but owing to our present facilities, we cut down the feed to 90 feet and that keeps everybody on the jump.

I picked out two knotty and cross-grained pieces to show that the 89-X does not tear out but leaves the stock as smooth as if scraped by hand."

The balance of this letter is too long to give all here. Soon we will reproduce it in its entirety.

That letter was written thirty days after a machine had been running and on January 30, 1910. Name of superintendent and plant given gladly.

## CHECKING, SPLITTING, ROTTING POSITIVELY PREVENTED

by LORAC, a thick liquid, to be applied to either timber or lumber at a trifling cost. It will not discolor or injure the wood, neither will it interfere with its subsequent working or painting. It requires no preparation before use, no heating or mixing, and is easily applied by unskilled labor.

Ryan-Stimson Lumber Co., Memphis, Tenn., writes us July 21, 1909: "The Lorac Protector we received seems to be doing pretty well. Please ship us at once another barrel of 600 lbs."

The Florence Pump and Lumber Co., Memphis, Tenn., writes July 6, 1909: "The Lorac Protector we recently had from you was all that could be asked for, and works splendidly, preventing the ends of squares from checking. Send us two barrels of 600 lbs. each."

Dec. 18, 1909: "Please send us two barrels of Lorac, about 600 lbs. each."

L. A. Schwarzwaelder, Chichester, N. Y., Manufacturer of Bank and Office Fixtures, writes us under date of Aug. 9, '09: "I have given your material a trial on some lumber, and find it has fulfilled all that you claim for it. Please ship me a barrel of 600 lbs. at your earliest convenience."

Herr Lange, Chief Forester, The Bismarck Forestry, Friedrichsruh, Germany, writes: "As your Lorac Protector has shown excellent results on Beechwood, we request that you send us immediately additional 500 lbs. of the same."

**THE GEORGE HENKE COMPANY** 62 Beekman Street  
NEW YORK

You need not pay for it if it does not do all we say. What better guarantee can we offer?

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## HARDWOOD RECORD, Chicago

# PARQUETRY FLOORING

If you have a dry room why not carry a stock of ornamental parquetry borders? They will round out your flooring business. We have exclusive agents in the large cities. Where we have no agents we will quote direct.

If you do not wish to carry stock and will send us rough sketch of room where you wish borders laid we will at once send you estimate of material required. Advise us of thickness of the flooring with which you wish to lay these borders and show us a sample of your grooving and we will make the borders to match.

Send for our handsome new book showing photographs in natural wood colors. We are sure that you can use our goods and add class to your flooring business.

Advertising copy must be received five days in advance of publication date. Advertising rates on application.

### Coming Association Meetings

#### NATIONAL LUMBER MANUFACTURERS' ASS'N.

The Board of Governors of the above association have fixed the dates for the 1910 annual meeting for April 19 and 20 at New Orleans, La.

GEORGE K. SMITH,  
Secretary.

EDWARD HINES,  
President.

#### NATIONAL HARDWOOD LUMBER ASSOCIATION.

The next annual meeting of this organization will be held at the Seelbach Hotel, Louisville, Ky., Thursday and Friday, June 9 and 10, 1910.

F. F. FISH, Secretary.

O. O. AGLER, President.

### General Market Conditions

Lumber conditions generally are improving and are more nearly satisfactory in the hardwood trade than in any of the building woods, with the possible exception of eastern spruce. When it is said that hardwood conditions are satisfactory the statement is only relative. Hardwood stocks of nearly all varieties are badly out of balance and in several woods the leading and most desirable items in shipping condition are practically out of stock. In many quarters there is a hesitancy about buying in quantities, but the aggregate of small orders makes up a vast volume of business.

Sales conditions in the Middle West are much better and values are stronger than they are in the East. Trade in the Atlantic Coast cities is still more or less spotted. In all the chief cities of the country the wagon-load hardwood trade is better than the car trade, and the car trade is more in evidence than big block orders.

The entire hardwood producing country is overrun with hordes of buyers who are trying to make advantageous purchases. The average

manufacturer is making little effort to crowd sales; his stock is badly broken and with a number of daily buyers at his office feels as though still higher prices were coming soon, and is therefore playing a waiting game.

The position of the jobber just at this moment is not to be greatly envied; he is between the "devil and the deep sea," on account of the aggregate higher scale of prices being asked by manufacturers on the one hand, and the insistence of the wholesale consumers that they buy from hand to mouth until they are assured of the stability of values on the other hand. The average stock of lumber at sawmills and in the hands of the jobbers is "shot full of holes."

The good end of plain and quartered oak, in both red and white, is commanding high and steadily increasing prices, and wide poplar is even stronger than oak.

There is a gradual absorption of medium and low grades, which are being taken on by remanufacturers, since they can not secure a sufficient quantity of firsts and seconds and No. 1 common to supply their needs.

Birch and maple are also leaders in higher prices, and a good many of the other woods are close followers.

### Universal Hardwood Inspection

In the minds of the vast majority of hardwood manufacturers, jobbers and consumers there has crystallized an urgent demand for an agreement between all parties in interest on the subject of a universal code of hardwood inspection. There is no desire for radical changes in any of the sets of rules in force, but there seems to be an urgent call that all the existing rules be codified into one universal standard.

Apropos of this subject it is pertinent to repeat an abstract from the banquet speech of Robert W. Higbie, president of the National Wholesale Lumber Dealers' Association, delivered at the recent Cincinnati annual meeting:

There was a time when it was said that competition was the life of trade. That is no longer true; for the word "competition" we substitute the word "co-operation," and today it is true that co-operation is the life of trade. The formation of all associations is simply the carrying out of that word.

Our associations have done much good; we have straightened out a great many of the faulty customs of our trade until we have well nigh reached the condition described by one of our guests yesterday, who said that the relations between the various branches of the lumber trade are today ideal.

But there is something yet to be done. I refer to the question of hardwood inspection, and I am not going to say very much about it because the position of this association is very well known. We are not primarily a hardwood association, but we have adopted the broad principle of national and international inspection. On that broad principle we stand and to that end we are ready to co-operate with other associations, and I believe that the men who conduct the lumber trade of this country are big enough, broad enough, fair enough and liberal enough to get together and settle this question. John Sherman, who was an honored son of this great state, said when Secretary of the Treasury, that the way to resume specie payments was to resume, and let me say, if you will, the way to settle this question is to settle it.

## Why Prices Are High

President Taft in reply to a recent query as to why prices are high, is reported to have said that he didn't know.

Previous to the enactment of the last tariff law, **HARDWOOD RECORD** warned the lumber trade against its falling into line with the trust politicians and assisting in the enactment of the one-sided, iniquitous legislation that prevailed. Such lumbermen as interested themselves in the matter at all went to Washington with a strong lobby, and while they did not get all the alleged "protection" they asked for, they succeeded in obtaining three-fourths of the old rate on lumber. Their coöperation in this enterprise permitted other "interests" to secure a much higher proportional protective rate. This paper stated at that time that the alleged protection which they asked for had but little effect on soft woods, and none of any consequence on hardwoods, since the majority of hardwoods grow in this country and do not fall into competition with foreign woods. This publication stated that the lumber trade would be far better off to exert its strength for a general reduction in tariff in all lines, and if it failed to do this that it would find there would be an increased cost on nearly everything that entered into lumber manufacture, including machinery, dry goods, food supplies, live stock and labor.

This prophecy has proved true, but all increased cost should be chargeable only indirectly to tariff legislation. The tariff has been made the excuse for increased prices on a good many articles of necessity and luxury that are not directly affected by this legislation. The manipulation by trusts of capital and labor, by cold storage and other forms of special privilege have had a good deal of influence on advances in prices. Note the fact that meat from Chicago is cheaper in London than it is in New York. Retailers of foods and family supplies have improved every chance to gradually increase prices. Retail distribution has become an economical extravagance in this country.

There are other reasons why prices are high. There is an increased flood of gold. The world's gold production for 1909 was four times the average yearly production from 1860 to 1890; more than twice as much as the average from 1891 to 1900, and nearly one-third increase over the yearly average from 1901 to 1907. Last year gold to the amount of \$450,000,000 was dug out of the ground and added to the previous supply. Since values are based upon gold, a surplus of gold means higher prices.

Again during the last few years the hours of labor have been much reduced with no corresponding reduction in wages. On the contrary, as much or more money is now paid in most industries for the eight-hour day as was formerly paid for the ten-hour day. The result is an increase of twenty-five per cent. in labor cost. The actual increase is greater than this, because of the overhead charges that must be assessed against every manufacturing plant. Labor-saving machinery has made no phenomenal advance during the last ten years, hence shorter hours of labor at the same or higher wages have not been offset by evolution in labor-saving machinery.

It must again be borne in mind that this nation is devoted to two great and non-productive extravagances. One is an attempt to equip

a navy that shall outstrip any nation on earth, and the other is the cost incident to the automobile craze. These two great "industries" in certain lines of labor have produced a war-time scarcity in these piping times of peace.

Once again, the quantity of farm products has hardly kept pace with the increase in population. While the world's per capita production of cereals has been about the same as for the last five years, in the United States there has been a relative decrease in many lines of farm production. The demand has been greater than the supply, hence higher prices for farm products.

The country is on a "spree of prosperity" following the quick recovery from the panic of 1907. Matters are now settling down to a more solid basis, and the general industries should be prosperous for some years if there comes about an increased respect for old-fashioned economics. Today human wants, or more accurately speaking, human desires, have multiplied. High living is costly, and people never lived so well or so extravagantly as they do today.

Undeniably prices at the present time are at a high level and many of them will show a gradual reduction for some time to come. This observation is not true of lumber. The law of supply and demand is paramount everywhere, and with this fast diminishing product it is probable that values will show a gradual accretion for all time to come.

Even the highest priced lumber is showing less increase in cost than any of the standard products emanating from the natural resources of the land.

## The Administration of the Public Domain

It is timely that the **RECORD** should present in this issue a sketch of that foremost advocate of conservation, Gifford Pinchot, dismissed head of the United States Forest Service. Gifford Pinchot's only offense was his insistence that the public domain is public property and should be so administered as to benefit the whole people. He, in common with other honest men, has no

objection to individuals getting rich by developing the natural resources of the country so long as the people at large receive a share of the benefits. He does object to a system which gives multi-millionaires through development of public property opportunity to use their wealth and power to make the cost of living higher.

Such is the new theory that is becoming generally accepted throughout this country. It is very new yet, so new that the forces in control of Congress up to the last few days have believed it to be a joke, and the trusts can not repress a smile when the subject is mentioned. The clipping of Joe Cannon's wings is the first demonstration that the nation has had that Congress as a whole believes that the public domain is public property.

The movement for the preservation of the national wealth in the interest of all the people will now probably press steadily forward. The middle West and the West are keenly alive to the significance of this new conception, and all sections are developing a persistent demand that it be made a new departure in national policy.

It may be well to recall that Gifford Pinchot and Mr. Roosevelt are on the other side of the water in consultation about things that have been done and are doing. Wait!

## USEFUL MEN

**S**OME of the most useful men, as well as the most unselfish and devoted, with whom I come in contact are successful business men of large affairs. They are modest and unassuming; simple and direct in their methods; wide as the world in their sympathies; lofty as the stars in their aspirations for human progress; sagacious beyond other classes of men, and respected to the point of veneration by those who know them well, because they are men of deeds rather than of words, who make good their professions from day to day. Business has not so narrowed them, nor has devotion to philanthropic ends or public reforms so distorted their mental visions, that they are not able to enjoy what is good in life, whether books, music, pictures, the companionship of friends, or the restful contact with Nature in field or forest.

—ALBERT SHAW

## The Trouble with the Times

On the whole the general business of this country is from fair to good, and when one talks about "the trouble with the times" there is and should not be any serious menace to the future of business conditions.

The only trouble with the times seems to be a general distrust brought about by political and commercial agitation. Theodore Roosevelt discovered that there was a good deal of political and commercial wrong-doing in this country. He set about in a drastic way to expose these wrongs and attempt to correct them. Trusts and corporate money resisted these attacks. He had a fight on hand in every quarter of the country. A panic ensued and while corporate greed was checked, the average business man suffered, and this suffering went down the line to the poorest laborer in the land.

Mr. Roosevelt set up new ideals of commercial integrity and in carrying out these ideals he has many followers. Chief among these followers is the present incumbent of the White House.

Mr. Roosevelt left matters in a good deal of turmoil. While President Taft was equally anxious to see good morals and a "square deal" prevail in politics and business, he has largely ceased working on Mr. Roosevelt's drastic lines, but has chosen rather to placate everybody and everything as far as was in his power. He probably has been unfortunate in his selection of advisers, because he certainly has things in worse shape than they were left by his predecessor. No matter what the result of the Ballinger investigation may be, Mr. Ballinger is discredited in the minds of nine men out of ten. Mr. Taft is in all sorts of rows with other countries over his Aldrich-Payne tariff law, and he is certainly in bad with the average American citizen.

Roosevelt was brave in his attempts. He welcomed a fight when he thought he was fighting for the right. His successor undeniably has made an honest attempt to accomplish Rooseveltian ideas on lines of conciliation and diplomacy, but the "big stick" has been hidden. Roosevelt was sponsor for a cult which has grown up in all parts of the nation and has been popularized—the agitators.

The nation has become pessimistic. The great publishers of the country, with doubtful integrity of purpose in many cases, have dug into the by-ways for any possible thing which they could attack. They have gone for and after conservation; they have gone after railroads; they have gone after Alaska legislation; Colorado politics; Standard Oil; the sugar trust; Joe Cannon; general business morals and hardwood inspection.

There is a perfect tornado of muck-raking, and it has come to such a pass that the average business man would be willing to take any sort of bitter medicine if by that means he could once more bring about commercial peace and harmony in the land.

## Prosperity Shown by Iron and Steel Production

That Wall Street is evincing a growing callousness as far as adverse legislation is concerned, and is exhibiting a tendency to overlook the more or less temporary effects of recent and pending congressional action, for the more genuine indications of industrial soundness, is the note most strongly sounded in Charles M. Schwab's report on the iron and steel production, recently published in the Wall Street Journal.

Mr. Schwab makes the astonishing prophecy that in the near future there will be a yearly increase in the yearly output of iron and steel, of forty million tons, a statement which really reiterates his prediction of a few years ago that the net earnings of the United States Steel Corporation would shortly amount to \$250,000,000 yearly.

Of paramount importance, however, is the moral support, lent business in general, by the unwavering conviction of this industrial Goliath in the ability of the United States to rise unchecked over all adversity, to a goal of prosperity higher than ever before attained.

Evidence of late has been plentiful, according to this authority,

that business men in general are becoming convinced that with production and distribution carried on in accordance with sound economic laws, there need be no fear whatsoever of the ripples caused by state or Federal legislation or action, which constantly keep the bosom of the industrial sea in a state of minor unrest.

## An Inning for Mahogany

There is a material strengthening in mahogany values at Liverpool, the chief point of assemblage and distribution outside of the few big importers in the United States. This was particularly noticeable at the Liverpool sales on March 16 and 17. The Timber Trades Journal of Liverpool is responsible for the statement that there was a falling off of forty-two per cent in imports of mahogany logs during 1909 as compared with 1908.

There is manifestly a dearth of stocks of mahogany logs at points of production, otherwise it is certain that with the advancing values exporters would have rushed them forward before this time to get the benefit of the increasing values that have developed during the last five of six months.

With the increased price of high-class American furniture woods, mahogany is certainly having an inning in the way of demand, and today it is in an exceptionally strong position. The surprising feature of the situation is that mahogany lumber values are not advancing at all in proportion to the rise in oak, and this is assuredly the fault of the manufacturers and dealers in this premier of furniture woods.

It is also noted that there is a marked improvement in the general character of log shipments now being received at Liverpool. The London contemporary recites that in question of size, utility and ease with which a wood can be seasoned and manipulated and the cost of finishing, mahogany stands an easy first when compared with all other high-class furniture woods. Even the lower priced wainscot oak now on the English market, if the difference of measurement is considered, is distinctly dearer than the much superior mahogany. As a matter of fact yellow poplar panel in wide stock commands a higher price today in the English markets than does mahogany. The American demand for mahogany is manifestly increasing, and it is up to the producers to get a price for it that is something near commensurate with its value.

## Editorial Notes

There is a good deal of talk about a lumbermen's liability insurance company that will embrace sick benefit, life and accident policies for employees. This eventually will be a success if employees can be convinced that the employer is the best friend they have, and is interested in the welfare of those whose labor contributes to his prosperity. Such a system of insurance would protect both the employer and the employee against unjust claims, and would drive "jack-leg" lawyers out of the business of enforcing unfair claims from employers and then absorbing seventy-five per cent of the resultant verdict for collection charges.

\* \* \*

The thoughtful visitor at lumber associations is always impressed with the fact that it is the successful ones of the number who frankly offer at these meetings all the information to their fellows that is in their possession, and sacrifice their time and money for the benefit of the trade at large. There is a reason for it. Can't you guess it? These wise men know that the educated competitor is the best competitor that they can have. It is unintelligent competition that plays hob in business, whether it is the hardwood trade or any other line.

\* \* \*

It now looks as though the proposed railroad strike among various railroad employees is on the verge of being settled for some time to come. The Baltimore & Ohio Railroad Company has made a new and advanced scale for its employees, and the same policy will probably be pursued by the big western lines in connection with the demands of locomotive firemen and switchmen. It is sincerely hoped that this result will come about and the strike will be averted.

## Pert, Pertinent and Impertinent

### The Measure of Success

A tall and pompous citizen pursues his stately way. "That man is worth five million bucks," we hear admirers say; and folks salute him as he goes and wear a servile smile, and while he lingers in their view they talk about his pile. It's good to have five million bucks, or half a million less, but being wealthy doesn't mean that you are a success. Of all the gifts the gods bestow, the commonest, I wot, is that of raking in the scads till friction makes them hot. There is no crossroads in the land but has its plutocrat, some village Astorbilt who hoards and grows exceeding fat; but villages are far between to judge from late returns, which breed a future Millet or a follower of Burns. It's good to have five million bucks, if they're not counterfeit; it's nice to chase yourself around and feel that you are It; but if you

have no other claim to confidence and love, the jumping-off place you should seek, and give yourself a shove. I'd rather keep a-plugging on, with little to disburse, and journey to the bone-yard in the county poor farm's hearse, and have folk say I tried my best to do my little part, than leave a lot of rocks behind and not a mourning heart.

—Walt Mason.

### Be a Good Fellow

While roaming about on the highway of life,

To the fact did you ever get wise?

There's all kinds of lobsters about every day;

And there are tin-horn sports in disguise

But just pass them up, they are not in your class,

They are full of hot air, as a rule,

When you're out for a time, "pin this in your hat."

Be a good fellow, not a durn fool.

And don't be a "piker" whatever you are,

For you'll surely bump into some fan,

Who is up in the game with all kinds of dope,

And ready to size up his man,

Just keep your glims open, 'tend strictly to

"biz."

Don't get up in the air, but keep cool,

It surely will win, and bring home the tin, to

Be a good fellow, not a durn fool.

—Tom J. Nicholl.

### To Be Hoped For

A little more sweet and a little less sour,

A little less weed and a little more flower,

A little more song and a little less sigh,

A little less earth and a little more sky!

—Baltimore Sun.

## A Pertinent Warning

Hold the Output Down, or the Chap in the Back Seat Will be Bounced Out.

### A Riddle

She had a diary, all bound  
In leather red,  
Designed for keeping till its course  
A year had sped.

She had a secret rich and rare,  
Told by a friend,  
Designed for keeping tight until  
The world should end.

She had a gold piece round and bright,  
A nest egg planned,  
Designed for keeping till it grew  
A fortune grand.

Concerning all into our mind  
This riddle crept:  
Which of the three do you suppose  
She longest kept?

—New York Sun.

### Old Joke Revamped

Wedderly—"My wife tied this string around my finger this morning so I would remember to mail a letter for her."

Singleton—"Did you mail it?"

Wedderly—"No; she forgot to give it to me."

Fair Millionaire: "Oh, Vladimir, they say you are a fortune hunter, and are only marrying me for my wealth. Tell me that this is not true."

Lord Dedbroke: "Why, my dearest, I would marry you if you were penniless."

Fair Millionaire: "Prove this, my own Vladimir, and I shall be absolutely happy."

Lord Dedbroke: "Settle the whole of your

vast fortune on me, leaving yourself destitute, and I will wed you in the face of the whole world."

A man who has controlled Fortune is always amazed when he finds he cannot control a woman.

It's never half so hard to raise money for our luxuries as for our necessities.

It's easier to lead some men to the bar than it is to drive them away.

The average man is either dissatisfied with what he has or with what he hasn't.

Many a man lives on the square who resides on a back street.

There must be something wrong with the vision of some people who do their duty as they see it.

# AMERICAN FOREST TREES

## EIGHTY-FOURTH PAPER

### Shingle Oak

*Quercus imbricaria* Michx.

Shingle oak, so called because of the fact that it is largely manufactured into shingles, is an entire-leaved member of the red oak group. While inferior physically to true red oak, it has quality sufficient to give it a fair commercial value. It is a quick growing tree, with foliage of singular attractiveness, and consequently is sometimes planted for ornamental purposes. It seems especially suited to hybridize with other species, and *Quercus laevis*, believed to be a cross between *Quercus imbricaria* and *Quercus velutina*, now has an extensive range, though scattered in growth.

*Quercus imbricaria* requires good soil for growth, but is not partial either to uplands or bottoms. It is found at its best in the lower Ohio river basin and in Missouri, but is comparatively rare in the East. From middle Pennsylvania its range extends southward along the Alleghenies to northern Georgia, Alabama, Tennessee and Arkansas.

While generally known as shingle oak in Delaware, North Carolina, South Carolina, Kentucky, Indiana, Illinois, Kansas, Iowa and Nebraska, it also bears the name of laurel oak in Pennsylvania, Delaware, South Carolina, Kentucky, Illinois and Nebraska; jack oak in Illinois and water oak in North Carolina.

A mature tree might be as much as one hundred feet high and three or four feet in diameter, and has a round or pyramidal, attractive crown composed of many slender branches and twigs. The foliage is distinctively grouped at the ends of the twigs in star-like clusters. The leaves are four to six inches long, are oblong in shape with wedge-shaped or rounded bases and are deep green and shiny on the upper side but lighter below. Winter buds are small, light brown and slightly angled; the male flowers grow in white fuzzy aments, the female on slender peduncles. The acorns are short, stubby and rounded, covered one-third of the way with thin shallow cups. The bark on the older trees is brown, tinged with red, close fitting and firm and divided into even scales.

There is rather a marked similarity in the general appearance of shingle and pin oak, especially in the slender twigs, and the branch arrangement. Yet there is no possibility of confusing the trees, as the short, rigid pins of the latter are lacking

on the shingle oak. The leaves are a totally different, as described, those of the pin oak being deeply cleft and having sharp pointed lobes. Characteristic of the shingle oak is the grouping of the leaves on the ends of the twigs. Not only is the foliage of this tree beautiful in the summer; in spring the delicate pink tints of the new-

leaves and rather wide annular rings, the grain is somewhat coarse. The wood finds general use, where the growth exists in any quantity and size, as siding, clapboards and shingles, and also in construction. It is a good fuel wood and is used for making charcoal.

TYPICAL FOREST GROWTH SHINGLE OAK

born leaves and later the richer autumn colors are especially pleasing to the eye.

Shingle oak has a wood of typical red oak appearance and color, the sapwood being thin and lighter in tone than the heart. The wood is tough, hard, strong and heavy, weighing about forty-seven pounds per dry cubic foot. On account of the large

### Last Year's Forest Fires

Fire played less havoc in the wood lands of the national forest states last year than it did in 1908, although the number of fires was 410 greater. The Department of Agriculture has just completed the statistics. The protective value of the work of the department is shown in that (1) almost eighty per cent of the fires were extinguished before as much as five acres had been damaged; (2) less than one and one-half acres to the square mile of national forest land was burned over; (3) and the amount of damage done to the burned over area averaged but \$1.26 per acre.

For the twelvemonth ended December 31 last, there were 3,138 fires on the forests, 1,186 caused by locomotives, 431 by campers, 294 by lightning, 181 by brush burning, 97 by incendiaries, 38 by sawmills and donkey engines, 153 by miscellaneous and 758 by unknown agencies. The area burned over was, in round figures, 360,000 acres, of which about 62,000 were private lands in national forests, as against 400,000 acres in 1908. Some 170,000,000 board feet of timber was consumed, of which 33,000,000 feet was privately owned, as against 230,000,000 in the previous year. The loss in value of timber destroyed was less than \$300,000, of which close to \$50,000 was privately owned. The loss of the year before was about \$450,000. Damage done to reproduction and forage shows a remarkable decrease, less than \$160,000 being the record for 1909 and over \$700,000 that for 1908.

The report of the forester for 1909 said of the fire record of 1908: "That year was one of prolonged drought during the summer and fall, and of disastrous forest fires throughout the country. The national forests suffered relatively little. \* \* \* About 232,191,000 board feet of timber, or 0.06 per cent of the stand, was destroyed. \* \* \* A total of 2,728 fires was reported, of which 2,089 were small fires confined as a rule to an area of five acres or less. The cost of fire fighting, exclusive of the salaries of forest officers, was \$73,283.33. This sum, added to the proportion of the total salaries of rangers and guards properly chargeable to patrol and fire fighting, was less than one-twentieth of one per cent of the value of the timber protected, estimated at an average stumpage value of \$2 per thousand."

The Osage Handle Company of Eldon, Mo., has resumed the operation of its factory, with E. D. Hartwell as manager. Mr. Hartwell has a wide experience in the handle business, having been in that line for thirty years. The company is engaged in the manufacture of a high grade of shaved hickory handles.

# Builders of Lumber History

NUMBER XC  
Gifford Pinchot

(See portrait supplement.)

When Gifford Pinchot graduated from Yale, forestry in the United States existed in books only. But he became interested in it and went abroad to study. In England, by chance he met Sir Dietrich Brandis, one of the greatest figures in practical forestry in the world. Following the advice of Sir Dietrich, Pinchot started his preliminary training at the Forest School at Nancy. After finishing there, he studied extensively in the forests of Germany and India, still under the guidance of the man who had outlined his first studies. Pinchot inherited the same untiring energy and enthusiasm that gave to that old "saint of the forests" the exalted position which will always be his. As a consequence, the two became close friends, which resulted in Pinchot being given opportunities for study and observation usually denied foreign students.

In 1892 Pinchot undertook the first practical task in forestry, on any considerable scale in the United States, at Biltmore, N. C., and he prepared the forestry exhibits from that state for the World's Fair at Chicago. Later he opened an office in New York as a "consulting forester"—a profession that had practically no clients, yet he worked with as much enthusiasm as if he were achieving great visible results every day, and with the keenest enjoyment.

July 1, 1898, he became chief of the Division of Forestry in the Department of Agriculture. The Division of Forestry at that time consisted of eleven people, only two of whom, Mr. Pinchot and his successor, Henry S. Graves, were professional foresters. Its work was entirely scientific, though it had no laboratory and was advisory to private owners who did not wish advice. The forest reserves which had been created in President Cleveland's administration, chiefly upon the advice of the commission of which Mr. Pinchot was secretary, were still under the control of the Interior Department. There were no trained men in the ranger force, and the whole field service was hardly more than a farce.

Beginning in 1898 the Division of Forestry transferred its chief interest to the field, though it had not yet acquired any authority over national forest reserves. It began two definite tasks: to get the data necessary to found the science of American forestry, and to educate the public to its necessities.

By 1901 the work was so increased that the division was enlarged to a bureau. It still, however, had no forests under its charge. The first administrative work began two years later, when the sale of the

timber on the Chippewa Indian lands in Minnesota was put under its charge.

Still, while the Forestry Bureau was building up a trained force, creating the science of forestry in this country, giving a striking example of its benefits in Minnesota, and beginning to educate the public, the National Forest Reserves were administered much in the same manner as they had always been, and a strong feeling of resentment against them was growing in the West, which sooner or later seemed sure to cause their abolition. This was a natural resentment. The forests were simply kept from any human use whatever. They were still under the management of the Interior Department, which had no scientific knowledge of forestry. At the same time the Agricultural Department's corps of foresters had no forests to care for.

On the first of February, 1905, this illogical situation was remedied. The control of the forest reserves, since then called the National Forests, was put into the hands of the Bureau of Forestry, which was renamed the Forest Service. It was the beginning of a new era, in which the theory of beneficial use was the keynote of the work.

It was at this time that the real work of Gifford Pinchot began, the work of conducting forestry, not to save trees, but to use them wisely—trees and every other natural resource. The policy of proper forestry was begun with imperfect means of execution, but it was begun; and in 1909, 352,434,000 board feet of timber were cut in the National Forests, and this cutting left them in better shape than they were in before. More than a million and a half cattle and horses and nearly eight million sheep and goats grazed within their borders without damage to the range, and without bloodshed between the cattle and sheep men. Now, 216,000 people live in the National Forests, and mills, mines, power stations and many other activities are carried on, of benefit to the people, and without damage to the forests. The fire loss has been reduced to about one-half of what it was under the old administration.

While all this is going on, the National Forests are protecting the head waters of all the streams in the West, and the streams mean life and light and power to the population.

All this was not accomplished without a struggle. To some people the ideas were revolutionary and therefore bad; others opposed them because they felt they meant too much centralization. But the real opposition came from those who had benefited from the old system of bad laws and loose methods. They were numerous and

strong and they were hard fighters. Pinchot went West to meet them.

In the summer of 1906 he met criticism at a cattlemen's conference at Glenwood Springs, Colo., and Senator Heyburn's attack on him at Boisé. In 1907 he faced his opponents in the Denver Land Convention, "packed" to rebuke him and his policies, but nothing came of it. The convention was discredited and its promoters lost ground.

It was from necessity, and not from choice, that Pinchot became connected in any way with the present proceedings at Washington. Only when the conservation policy was definitely discouraged and set back, did he become even indirectly involved in the controversy. But then the strongest quality of the man began to assert itself—the fighting quality. For any merely personal advantage, he would not fight any human creature. In all his work he had never considered his personal fortune. It is said that he had always given his salary to further the interests of his work—a story which is truly characteristic.

There is probably no other case entirely parallel to this—a man whose personal fortunes are in no way involved, who never gave a day's work in his life to make a dollar, and who has no political ambition, nor a desire for office except for the furthering of conservation, who knows perhaps more nearly every square mile of our territory than any other man, who, beginning as a \$2,000 clerk under Civil Service rules in President Cleveland's time, has worked out a great policy of more fundamental importance than any other; a policy which all political parties have accepted and which underlies a true philosophy of national life and growth.

It was indeed unfortunate that President Taft's administration did not at the very first show an active sympathy with what Mr. Pinchot stands for. The fact of this man's loss for the public service or that man's—the fact of any man's loss—is a little matter. It is no great matter, therefore, that Mr. Pinchot's official services were lost to the Government, in an atmosphere of changed and changing relations, but it is a very great misfortune that this policy should be questioned or disturbed.

Gifford Pinchot out of the public service is the same as Gifford Pinchot in the public service, and the forestry machinery of the government is in the hands of men of his own training (most of the foresters that we have were trained by him, or owe to him their first inspiration). But there is this difference: As a private citizen and president of a national forestry association, he will do more active work than he could do in an official position, for the ed-

**GIFFORD PINCHOT**  
WASHINGTON D C

ucation of the people on this subject. He is still chairman, too, of the National Conservation Commission.

After all, the proper measure of his work is not the number of square miles of land that he has saved for right and perpetual use, but the changed thoughts of the whole nation about the sources and perpetuation of all fundamental wealth. He has been a great awakener of the people on a subject that strikes deeper than any political policy.

Mr. Pinchot is now forty-four years old. He has the biggest constructive idea of our

generation, an idea that works for the direct personal benefit of every dweller on our land in our generation and in all succeeding generations. He has no private ends to seek. He has no private business. He has given once for all his life and his time for the public welfare. He is a well-equipped man, of prodigious industry, of attractive personality and of the hardy virtues—a woodsman, a sportsman—a man at home in all parts of our country and with real persons of every grade of life. He has already made a great career, but a greater is before him.

## Utilization of Hardwoods'

### ARTICLE XXXVII BOWLING ALLEYS

It is not often that in a line of manufacture involving many thousands of dollars only one kind of hardwood plays an important part. Several varieties are usually required where hardwood is used at all, but in the manufacture of bowling alleys and pins there is only one hardwood employed, namely, the best grade of clear white maple.

Illustrations shown in connection with this article are furnished by the Brunswick-Balke-Collender Company, the largest manufacturer of bowling alleys and their accessories in the world. This concern, in order to secure a perpetual supply of high-grade maple, in 1908 bought 12,000 acres of timber situated in Wisconsin and Michigan, which bears, among timber experts, the reputation of being the finest stand of maple

in the world. In addition, the company owns a similar tract in Wexford county, Mich.; it has its own steam barge on which the raw material is transported from Lake Superior to the plants at Chicago and Muskegon. The pine used for the main part of the alley is partly bought from southern manufacturers and partly cut from a tract owned by this concern in North Carolina.

There are three types of bowling alleys: the continuous alley, the sectional alley, in which maple is used for the entire length, and the sectional alley, in which maple is used only for approach and pit-ends, and Georgia pine for the main alley. The hard usage to which approach and pit-ends are subjected necessitates the use of hard maple in that part of the construction. In the case of the main alley, however, the

chief requisite is a smooth, slick surface, producing as little friction as possible, and not necessarily being required to endure any great wear. Speed is here sought, and clear Georgia pine is the material used, as it seems best to answer all requirements.

As before stated, only the finest quality of maple is used, stock being selected for grain and color. After cutting it is stacked on end and air dried for a considerable period before being shipped to the factory. Before finally being worked, the stock is subjected to a re-drying at the plant, and is then cut into strips one by three inches, of various lengths. Special machinery is employed in cutting these strips, which are tongued and grooved and dovetailed into the pine of the main alley. Steel clamps are used to hold the strips securely in place, one of the accompanying illustrations showing the method employed.

The pine is selected for grain and hardness, only "B" and better grades being used. Georgia pine is used exclusively, as it grows much more slowly than the ordinary yellow pine and hence is much tougher. All the stock is quarter-sawn, and before shipping to the factory is air dried for several months, and later is re-dried in the factory kilns. The strips into which the lumber is sawed are treated separately in a machine, which in addition to giving them a perfectly smooth and true surface, provides a side, tongue and groove, similar to that employed in the maple. This process of tonguing and grooving involves a large waste in the thickness of the material, and hence adds considerably to the ex-

MODERN CONTINUOUS BOWLING ALLEY

pense of the alley. Steel clamps, similar to those used in the approach, are employed here to insure greater strength and firmness.

The usual method of installing alleys is to ship the strips previously manufactured directly from the factory to the place of installation, trained mechanics being employed by the alley company to perform the work.

SECTION OF BED, SHOWING TONGUE AND GROOVE CONSTRUCTION AND METAL CLAMP

All material for gutters or troughs at either side of the bed is cut to proper dimensions and prepared. It consists of white-wood and pine strips put in proper shape so that no difficulty whatever is experienced in placing them in position. Before laying the gutters are grooved and kept in a mold from one to six months.

The balls are made of one piece, *lignumvitae* being commonly used. It is readily understood why exceptionally hard wood is necessary for bowling balls. Wood in this construction is being superseded by a composition that is known as "mineralite." Balls made of this material are claimed to be faster and harder, and in many ways give more satisfaction. It is said that they last practically forever.

The pins are made of absolutely clear maple. After felling, the trees are cut into blocks of approximate dimensions of 5x5x18 inches, in which shape they are seasoned before manufacture. After being shipped to the factory they are roughly shaped down preparatory to being subjected to the same re-seasoning process which all the other material undergoes, and are then turned to the required shape. Experiments have been made from time to time with a view to the substitution of some other material or composition for maple in the construction of bowling pins. As yet nothing has been discovered which will even approach it in this line of manufacture. Special lathes are used in turning out the pins.

After installing, the alleys as well as the pins, balls and other accessories are finished with shellac and enamel polish, the only

method which seems capable of giving the required smoothness. Maple seems to be the only hardwood which will take and hold a proper finish, although experiments in this line have been made with various other woods, such as oak. In using enamel and shellac the natural color of the wood is preserved.

Only young or slow growth of maple answers the requirements of manufacturers of alleys, and it is always cut according to the grain, a method necessitated by the manner in which the strips are laid. In the case of balls and pins the cuts are at right angles to the grain, or through the heart of the tree, this being necessary to get the strongest possible fiber.

Before re-drying in the factory kilns, all stock is carefully examined and is placed on small shelves, which allows of a complete circulation of air and hence more thorough seasoning. Notwithstanding the fact that *lignumvitae* is of exceptional hardness, particular care is taken in seasoning. With the increasing use of "mineralite" balls the abandonment of *lignumvitae* for the manufacture of bowling balls is probably a matter of the near future.

THOUSANDS OF TEN PINS IN THE ROUGH BEFORE SEASONING IN THE KILNS OF THE BRUNSWICK-BALKE-COLENDER CO., CADILLAC, MICH.

#### Teak Forests of Siam

Vice-Consul-General Carl C. Hansen of Bangkok has prepared the following account of the management and production of the teak forests of Siam:

The total export of teak from the port of Bangkok, Siam, for the year ended March 31, 1909, amounted to 7,693,037 tons, valued at \$4,259,907, being a decrease of \$546,358 as compared with the previous year. The great teak forests of Siam are in Payap, or northern Siam, and in the upper parts of the Nakonsavan and Pitsanuloke provinces. The survey of these forests was begun in 1907 and is not yet finished. Britain has two consular officers stationed in northern Siam to care for her commercial interests there, which chiefly consist in teak forests. One of these officers states:

The teak industry in northern Siam is prac-

tically monopolized by European firms. The interests concerned are four British firms and one Danish firm. A French firm also obtained a concession early in 1909, but does not appear to have yet started operations. The forests that are leased or owned by Laos and Burmans are in almost every case worked under some form of contract or agreement with one or other of the five firms referred to. The actual amount of teak delivered at Kado, the Salween duty station for Siam teak, exceeded the deliveries of 1907 by 1,925 cubic tons, and of the five-yearly average by 1,387 cubic tons, though the value of the timber shows a decrease in both cases of \$10,000 and \$4,280, respectively. This may be accounted for by the presence of a larger percentage of small wood than formerly, and also possibly by the general depression of trade. Owing to an exceptionally good floating season the number of logs that passed the duty station at Paknampho greatly exceeded the deliveries of the previous year. The official returns for the year ended March 31, 1909, show a total of 121,367 logs.

These valuable teak forests are now under the supervision of a well-organized forestry department, based on the India-Burmese system, with trained European officers in charge, and the former wholesale denudation of the teak forests is prevented. Only trees of 76.5 inches girth can now be girdled or barked near the ground, which causes them to die, and a certain number of trees must be left untouched within a given area to seed the ground for the future.

After being girdled the tree soon dies, and is left standing, to season, for about two years, is then cut down, dragged by elephants or buffaloes to the nearest stream and floated to Bangkok or Moumain, according to the location of the forest. The teak industry forms one of the most important resources of the country, and thousands of people are engaged in cutting, hauling and rafting the teak logs to the Bangkok market and sawmills. Teak wood ranks second in the exports from Siam. The revenue from royalty on teak and other wood was estimated at \$412,943 for the year ended March 31, 1909.

The world's supply of teak comes from Siam, Burma, India and Java. Teak wood is not attacked by the "white ant," which is so destructive to other wood in the tropics, and teak is thus largely used in Siam for the building of the better class of wooden houses. The main uses of teak wood are for the shipbuilding, furniture and rolling-stock industries, as aside from other qualities, such as hardness and durability, it contains an oil which prevents the rusting of iron or steel imbedded in it, and therefore makes it especially useful for these purposes.

The teak tree (*Tectona grandis*) is not found in Siam in the forests composed of its kind alone, but grows scattered among trees of many other species at an elevation not exceeding 2,500 feet, and prefers the hillsides and comparatively dry land in districts where the average annual rainfall does not exceed 50 inches.

The direct exports of teak to the United States from January to October, 1909, amounted to \$5,610. In Germany, Great Britain and other countries large quantities of teak are used for naval construction.

Forestry in Siam is by no means limited to teak, as many other valuable woods are found in the extensive forests, both in the north and in the south of Siam. An English company has lately taken over a concession for the working of some of these forests in the province of Siracha, but this industry has hardly been touched yet. The total value of the export of wood, outside of teak, amounted to only \$60,727 for last year. Among the woods other than teak may be mentioned "padoo," a valuable furniture wood, ebony, rose, iron and box wood, and many others, the value and use of which has not yet been ascertained.

# President Taft's St. Patrick's Day Conservation Talk

Before a cheering audience that filled the Auditorium Theater, Chicago, to overflowing, President Taft, on March 17, outlined his program on the conservation of natural resources, in a half-hour "talk," as he termed it, but which proved a most important and extensive utterance on the subject. The President made a strong plea for a law that will validate immediately existing and future withdrawals, under the President's order, of coal lands, oil fields, waterpower lands and phosphate beds from the public domain, so that the government may then, at its leisure, proceed to the solution of the conservation problem.

The President outlined many of the difficulties confronting the movement and the remedies that have been suggested, and toward the close of his remarks took up the "lakes-to-the-gulf" deep waterway project. On this, he said, he is "still waiting to be convinced."

The meeting, which was one of the largest conservation gatherings in the history of the movement, was held under the auspices of eighteen Chicago clubs with a membership of 12,000, and the Chicago committee of the National Conservation Association.

The President was loudly applauded throughout his speech, the handclapping amounting to almost a demonstration when he mentioned former President Roosevelt and former Chief Forester Gifford Pinchot.

"Mr. Roosevelt was inspired to this movement by Gifford Pinchot," declared Mr. Taft. "I am in favor of giving credit where credit belongs." This was the only allusion which President Taft made during his speech to any of the participants in the Ballinger-Pinchot controversy.

The recommendations made by the President were:

Passage of a law validating withdrawals of lands from the public domain on an executive order, legalizing an existing custom.

Retention by the government of such control in its coal and water power lands so that it still may act as a director to prevent any abuse.

Passage of a law for the classification of public lands.

Development of a national health department for the preservation of the health of citizens.

The difficulties with which the supporters of the conservation movement still are wrestling, as outlined by the President, were:

Coal lands—How to dispose of them in a way to attract investment and still retain for the government control so that forty or fifty years hence the government may resume possession.

Water power—How many years to let a power for, when a readjustment ought to be had, what kind of leases should be given and how royalties should be adjusted on these and on coal lands.

Phosphate lands—Proposition to keep them

under the control of the government and to see that the deposit shall have general distribution at reasonable prices.

"The most foolish landlord," said the President, in driving home his points, "is the gentleman with a big building, who gets an enthusiastic tenant and shoves his rent up so high that the next year the lease has gone into the hands of a receiver."

When the President took up the subject of waterways he referred to the fact that in 1908 he, with William Jennings Bryan, spoke in the Auditorium at the waterway convention, and that last fall, to complete his education, he took the trip down the Mississippi River to New Orleans.

"I was waiting to be convinced—and I am still in that condition," he said. Going into the subject deeper, the President pointed out that water ways are useful instruments in regulating exorbitant railroad rates, and declared that whenever a river improvement project has been examined by experts, its cost reported, and it appears that it will assist in regulating railroad rates and will furnish transportation sufficient to justify the investment, he is for the proposition. He said that the Ohio River is the only one meeting these requirements, and after stating his belief that the Missouri from Kansas City to St. Louis and the Mississippi from St. Paul to Cairo are capable of development, he hit the "lakes-to-the-gulf" idea.

"As to your fourteen-foot water way from Chicago to the gulf," he said, "I am waiting to be convinced. There is in the present bill a provision by which the matter is to be submitted to engineers again. I hope I can select impartial ones, and the whole subject can be reconsidered, and then if the report is favorable I am sure Congress will act on it."

## Hardwood Record Mail Bag

### Material for Making Shoe Pegs Wanted

VIENNA, AUSTRIA, March 10.—Editor HARDWOOD RECORD: We want addresses of manufacturers of wood for making shoe pegs, and if you are able to give them to us we shall be much indebted.—

The above inquiry comes from a foremost importer of wood goods at Vienna, and if any of the eastern subscribers to the RECORD engaged in the production of maple or other shoe peg billets are interested in a good foreign connection, they can have the address of the above concern upon application.—EDITOR.

### Wants Oak Squares and Chair Back Stock

BUFFALO, N. Y., March 12.—Editor HARDWOOD RECORD: We want lists of manufacturers who are able to supply us 2x2 oak squares and 1x7-18½" quartered oak chair back stock.—

If HARDWOOD RECORD clients who are able to supply this stock want to make a good con-

nection, the address of the above concern will be supplied on application.—EDITOR.

### Wants to Sell Osage Orange Timber

LOCKLAND, O., March 12.—Editor HARDWOOD RECORD: I have three hundred fine osage orange trees which I would be glad to cut and sell to anyone interested in this wood. V. H. DENN, Box 235, Lockland, Ohio.

### Seeking New Pencil Woods

Recent conferences of representatives of the Agricultural Department, with several lead pencil manufacturers, have resulted in plans for testing new woods with a view to ascertaining whether or not they are suitable for the pencil industry. Some of the manufacturers contend that the supply of red cedar, which now supplies practically all the material for the 325,000,000 pencils turned out every year, will be exhausted within five years. A substitute fairly soft, with a compact, straight, firm grain, few knots, and capable of being easily whittled, is in immediate demand, and wood fulfilling these requirements and occurring in sufficient quantities will very shortly receive a tremendous boom.

At the suggestion of the pencil makers, the Forest Service will cooperate in tests of a number of the wood species growing on the national forests, mainly conifers, such as Rocky Mountain red cedar, alligator juniper, western juniper, redwood, incense cedar, western cedar, Port Orford cedar and Alaskan cypress. Specimens from the national forests will be sent to four leading manufacturers, who have agreed to make pencils of them and to record all tests and report same to the Forest Service, as well as to submit their own ideas and convictions as to the different woods.

The vast quantities of this type of coniferous trees found on the national reserves is a sufficient incentive for the service to render all possible assistance in this work. In the event of the adoption of any of the afore-mentioned woods for this use, a definite and conservative policy will be adopted by the government, with a view to eliminating the possibility of a repetition of the present shortage in pencil wood.

### Influence of Trade on the Car Supply

Reports from the freight car bureau maintained by the leading roads of the country since the beginning of 1907 reveal various facts interesting in connection with a résumé of trade conditions during the period of its existence.

At the time at which the bureau was inaugurated there was a period of serious car shortage generally throughout the country. This condition was remedied somewhat during the summer, but in the late fall months, even with the three hundred thousand new cars built during the year in commission, the supply was even further below the demand than previously, and so continued up to the days of the panic, when the balance shifted to the other side, maintaining that position until midsummer of 1909, when it gradually crept back to the former position, with the general opening of fall trade.

Recovering again in December of that year, an excess surplus of 25,000 over shortages was reported, the shortages being usually local and temporary and generally caused by inclement weather conditions, and indications do not point to any immediate repetition of the conditions prevailing late last fall.

The unusually severe winter conditions have been more or less offset by the fact that new rolling stock is being delivered constantly, and also by the increased size of cars and speed of trains—a fact pointed out by the railroads, who say that the cars are doing more service per car than ever before. The best figure for the year was set in March, 1909, when each car reported carried the equivalent of 493 tons per mile per day.

## THE STORY OF YELLOW POPLAR

Illustrations from Photographs by Editor Hardwood Record

### CHAPTER VI

This chapter of the story relating to the operations of the Yellow Poplar Lumber Company of Coal Grove, O., is not intended primarily to illustrate the picturesqueness of the Grand Canyon of Virginia, locally known as the Breaks of the Big Sandy, but to impress on the minds of readers the immense cost involved in securing poplar timber from the remote mountain fastnesses, where the last great stand of this wood remains.

In previous articles the operations of the Yellow Poplar Lumber Company from the woods to the river, and its big splash dam operations have been described in text and picture. Below this big dam exists a five mile gorge, tortuous to an extreme, with

uprising cliffs reaching in places an altitude of fifteen hundred feet above the water level. Russell Fork, on which the Yellow Poplar Lumber Company operations are at present located, finds its way to the main Big Sandy River through this cleft in the Cumberland Mountains.

The pictures accompanying this article but inadequately depict the rough topography of the region. The bed of the stream was originally strewn with rocks from the size of a tea-kettle to that of an ordinary business block, and previous attempts in driving the stream even in flood tides have demonstrated that between these obstructions logs lodged, forming great jams, so that it was impracticable to drive the stream in its natural condition.

Regardless of cost, Mr. Isaacsen of the Yellow Poplar Lumber Company determined to blast out these obstructions and make a reasonably clear channel for the passage of his company's annual log crop of forty million feet. The work was done last summer when the stream was low. These immense rocks were drilled and dynamited. The bald statement of this fact means very little, but when it is considered that there is no wagon road within miles of the Breaks, and that every pound of explosives, tools, coal and food supplies used by the crew that did this work, was carried in sacks on the men's backs for miles over rock-strewn trails and let down into this canyon, some little idea can be had of the expense involved. In this work twenty-two thousand

TOWER ROCK, THE IMPOSING PINNACLE OVERLOOKING BREAKS OF SANDY

pounds of dynamite were employed. It took four hundred and fifty pounds of this explosive to demolish Jerry Rock, one of the large obstructions in the stream.

This was all experimental work. When the Yellow Poplar Lumber Company made the great investment in this splash dam and in blasting out this channel, the officers did not know whether it was possible to make a success of it or not. They exercised rare judgment in every detail of the work and their skill and daring has proven a monumental success. The Breaks of the Big Sandy are no longer a bugbear to log driving operations.

Today forty million feet of big poplar sticks, heretofore described in the Record are through the Breaks of the Sandy and in rafting water between Elkhorn City and Pikeville, or safely in the log harbor of the Yellow Poplar Lumber Company at Coal Grove, O.

The next chapter of this story will describe the process of catching the loose poplar logs of the Yellow Poplar Lumber Company below the Breaks, forming them into rafts and floating them to the mouth of the Big Sandy River at Catlettsburg, making the rafts into fleets and transferring them to the log harbor of the company at its big sawmill plant at Coal Grove.

# VENEERS

### VENEERS IN AUTOMOBILE MANUFACTURE

In the first place, the indiscriminate use of the word "veneers" and its improper application to a great many articles in manufacture that are simply the product of cutting machines or are compounded from such products is deplorable. The word "veneers" as used today has become a misnomer, and I say this without referring to the definition of the word as found in the dictionary. The time was when that definition was absolutely correct, but it has become obsolete. The custom nowadays seems to be to call everything that is produced upon a cutting machine a veneer, and not only this, but in some instances to go farther and call the glued-up stock that is used for sides and tops in the manufacture of automobiles a veneer. I think that it is a mistake, in the first place, in using the word "veneer" as applied to all the products of a cutting machine, no matter what the wood, the thickness or the purpose for which it is used, and it is decidedly improper to call glued-up stock veneer. There are other and better terms, such as three-ply stock, five-ply stock, or as the railroads term it, "compound wood" or "laminated wood." I believe the latter to be the best term of all of them.

The use of laminated wood in the manufacture of vehicles is not new. For years carriage tops and bodies, hearse tops, the sides of delivery wagons, car ceilings, in both street cars and railroad cars, have been made of laminated wood. There seems to have been no difficulty about the finish or the practicability of the work in either of these lines. It ought to be unnecessary to say that glued-up stock, if exposed to moisture without protection, will disintegrate the glue as soon as the moisture attacks it; therefore, all classes of work where laminated wood is used must be carefully protected by paint or varnish, or both.

Where shaped work is required, laminated wood is almost indispensable. There should be no trouble about solid lumber checking. The man who makes any class of vehicle work should know when his lumber is dry and should finish it properly, and the danger of checking is then inconsiderable. The danger of checking, in my opinion, in laminated wood is more probable. The mere fact of cutting, i. e., the forcing of a knife through wood, no matter how well prepared the wood is nor how good the condition of the knife may be, naturally shatters the fiber to a greater or less extent; therefore it is necessary in finishing laminated wood to be careful as to the filler and coats, so that the danger from the natural checks of the wood shall be reduced to the minimum. I think that some concerns that rushed into the manufacture of automobile bodies in glued-up stock and have perhaps not used properly prepared materials thoroughly dried, may not have been as careful in the selection of their glue as they should have been, or may have overcooked their glue, and for one or many of these reasons their work may have been defective and the plies have parted. With good dry material and good glue properly prepared, and the plies put together under proper pressure, and the moisture evaporated before finishing, there should be no trouble about the plies adhering for an indefinite length of time, provided they are protected from moisture.

The special advantage in laminated work is that wide stock can be obtained for sur-

faces and, therefore, joined surfaces can be obviated and the chance of open joints eliminated. When large sizes are considered a high cost for the laminated wood must be also considered. The initial cost as compared with steel bodies will certainly be higher, and for that reason they cannot compete with the initial cost of steel bodies. I believe that with care they will last longer. A manufacturer of dashes claims that they spent months of time and several thousand dollars in experimenting with and perfecting a finish for dashes that would last six months. They probably do not mean to say that that is the life of a dash, but the intimation is pretty strong that within six months they must be refinished to prevent them from going to pieces. On these dashes veneers as thin as 1/30 inch are used. I hardly think that a carload of 1/30-inch veneers has been sold to be used in the bodies of automobiles, yet it is possibly the case. A carload of 1/30-inch would make up many an automobile.—D. E. K.

From the principal veneer centers of the country most gratifying reports are heard on the condition of this line of business. The demand continues strong and plants are running full time and will probably continue to do so throughout the spring and summer months.

There is a good demand for mahogany and Circassian walnut veneers, with a good supply of mahogany of various kinds in stock, and prices remain unchanged. The demand for Circassian veneers is constantly growing, while the supply of logs is insufficient to take care of the call. Prices are quite firm, good figured stock bringing, of course, higher values. Quarter-sawed oak veneers are in active demand, with only a slight advance in price. The call for oak veneers is not as active as the demand for mahogany and Circassian walnut. Plain and fancy veneers of all kinds are generally meeting with fair sale.

The Guelph Patent Cask Company, manufacturer of hardwood and hemlock lumber, veneers and hoops, with headquarters at London, England, and large operations at Wolverine and Honor, Mich., will establish another mill at Montreal, Canada. This will be up to date in every respect and will be under the management of Fred Start, who for a number of years has been superintendent of the Wolverine plant. Mr. Start will take charge about April 1.

In a recent windstorm the monster smoke-stack on the Roddis Lumber & Veneer Company's plant at Marshfield, Wis., was blown down, smashing the waste tunnel and tearing off sections of the roof of the building. The factory will be closed down about a week for repairs. The company is enjoying an active business, and it is reported that its factory may be enlarged if the present rush of orders continues.

The Gemmer Lumber & Veneer Company of Indianapolis, Ind., has completed a number of improvements in its plant which were made following the taking over of the business of the Standard Veneer Company. Lumber sheds have been built and the mill enlarged. The company is now in good shape to take care of its increasing business.

The Veneer Joining Company is a new con-

cern at Indianapolis, organized with \$5,000 capital. The company will establish a plant at once and will engage in the joining and manufacturing of veneers and will also deal in lumber. A. K. Hollowell, L. P. Hollowell and G. E. Hadley are the organizers.

The big plant of the Evansville Veneer Works at Evansville, Ind., continues to run full time as it has during the past year. The company reports business active.

It has been decided by the creditors of the Holland Veneer Company, Holland, Mich., that further operation of the plant affords better possibility of recovering claims, and the company will not be forced into bankruptcy now by being compelled to make payments. The factory will be operated for a time under the supervision of five trustees. The liabilities of the concern aggregate more than \$87,000 and the assets not much more than \$80,000, it is reported. Recently the company has taken up the manufacture of a veneered dashboard for automobiles, and the new management feels that this product will put the company back on a paying basis. Orders for more than 12,000 of these boards have been received and the factory is working overtime in an effort to take care of this business.

The Freiburg Lumber Company's new veneer plant is sawing veneers from flitches produced in the company's own mills. This concern specializes in Mexican mahogany and holds the record for bringing in the largest shipments of this wood ever landed in Cincinnati. It also cuts a fine quality of Spanish cedar and quartered sawed oak stock.

Frederick Eggers, founder of the Eggers Veneer & Seating Company, Two Rivers, Wis., died recently at the age of eighty years. Mr. Eggers was a pioneer in his state, locating at Two Rivers when but eighteen years of age. He established the industry of which he was the head in 1885 and brought it to its present successful state.

Work will begin in a short time on the new addition to the factory of the Evansville Dimension Company, manufacturer of veneers, panels and dimension stock, at Evansville, Ind. The Big Four Railway Company will build an extension from Evansville to Mt. Carmel, Ill., and will run the line through the yards of this company, thus greatly improving the shipping facilities of the concern.

Fire recently destroyed the plant of the New York Veneer Seating Company at Jersey City, N. J. The factory was badly damaged and the fire spread to neighboring buildings, burning a number of frame dwellings in the vicinity. A \$3,000 sander which the company recently installed was totally destroyed. A number of finished table tops and other furniture, a large amount of lumber and about \$35,000 worth of machinery were also burned.

The Buffalo Hardwood Lumber Company, which operates a fine veneer factory at Buffalo, N. Y., has been so successful in this line since it took up the manufacture of veneers some years ago that it has outgrown its quarters and recently moved its whole plant to the vicinity of its table factory at Blasdel, just over the south line of the city. The veneer works will be enlarged and new machinery, including a big rotary cut system, is now being installed.

The Escanaba Veneer Company, Escanaba,

Mich., is running day and night in an endeavor to take care of its orders. The concern employs about forty men, and with its present equipment consumes about a million feet of stock annually.

A large stock of logs has just been put in by Hood & Wright at their Big Rapids veneer plant.

J. F. Stengel of the Buffalo Veneer Works, Buffalo, N. Y., reports business active. He is cutting oak mostly at the present time. This plant has entirely recovered from the fire of last summer, and is now running in fine shape.

The Batesville Lumber & Veneer Company of Lawrenceburg, Ind., has increased its capital stock to \$70,000.

On March 19 fire damaged the plant of the Cincinnati Veneer Company at West Sixth and Front streets, Cincinnati. At two o'clock in the morning a blaze was discovered in the glue room, which spread rapidly, causing a loss of about \$25,000 on the stock and plant. This is fully covered by insurance. The loss on the building, which was leased by the veneer company, is estimated at \$5,000, also well covered by insurance. George Unnewehr, president and treasurer of the company, states that the cause of the disaster is a mystery, as there is no fire used in the glue room, and though the plant is wired for electric lighting there was no current in the wires at the time of the blaze, as at that hour the power was shut down and the dynamo not in operation. The company manufactures veneers and thin sawed and cigar box lumber and had a well-equipped factory.

A new factory is being erected by the Central Veneer Company at Winter avenue and the belt railroad tracks, Indianapolis, Ind. The company is also installing a new power plant.

Directors of the Plymouth Veneer Company of Plymouth, Wis., recently elected the following officers for that concern: President, H. G. Davis; vice-president, D. E. Meyer; secretary and treasurer, E. E. Eastman. The company will soon begin the erection of a new factory.

Charles E. Gregory, Mary H. Gregory, Mary W. Mothershead and O. M. Mothershead have organized the Veneer Package Company at Indianapolis; capital stock, \$10,000.

### Leonard Bronson Active Against "Trust" Howl

Manager Leonard Bronson of the National Lumber Manufacturers' Association is entering upon a campaign in behalf of the lumber trade. Many of the hardships heretofore experienced through adverse public sentiment could have been readily avoided by putting before the people a true statement of facts in contradiction of the erroneous and unjust statements so willingly published by the daily press. The following article, written for the Chicago Record-Herald, by Mr. Bronson, will be welcome to that thinking element who are fair enough to want to hear both sides of the question before passing judgment:

You may have noticed that Mr. Gifford Pinchot, in his statement following his deposal from the position of chief forester, spoke of the especial danger of monopolistic control of water powers and of coal lands now in government ownership. He said: "The first great immediate danger is that the water powers will be lost; the second, that the coal lands will be lost." Did you notice that he failed to mention the danger of monopoly of forest lands?

The omission is significant of the fact that

he is not in sympathy with those who cry "lumber trust" and with those who delight in denouncing the so-called "timber barons" or "timber monopolists." Mr. Pinchot is not apprehensive on this score, because he knows that there are two factors protecting the public. One is the law itself, by which it is impossible for timber lands to be "grabbed." The other is the fact, of which no one is so well advised as he, not only that timber owners and lumber operators themselves are the ones upon whom the country must chiefly depend for a perpetuation of its forest resources, but that they are in sympathy with the conservation movement and are coöperating with every public agency in an attempt to devise practicable measures by which this property, of value to them and of immense importance to the welfare of the country, shall be conserved and perpetuated.

Mr. Pinchot knows that, while there are large timber holdings in private hands, there is no monopoly nor prospect of monopoly. He knows the financial, industrial and political difficulties that stand in the way of the management of timber holdings, according to forestry principles and theories. He appreciates that timber property must be handled like any other property, with a view of at least a reasonable profit resulting from its ownership and operation.

He knows that the timber owners and lumber producers of the United States are at least as patriotic as any other class of citizens and that, as a class, they stand ready to do whatever can reasonably be done toward the adoption of methods of management which will, without working forfeiture or serious injury to private property, promote the interest of the community at large. He realizes that his most efficient assistance, promising most definite beneficial results, has come from the lumbermen themselves.

The public has been aroused as to the necessity of conserving the forests, among other natural resources, but has not yet realized its own share in this work. It has been popular to denounce the lumbermen without taking into consideration the conditions under which they have operated—conditions which largely have resulted from public indifference, ignorance, or even hostility.

The people were indifferent to this subject until the decreasing supply of timber resulted in higher prices for certain classes of lumber and then, ignorant of conditions, the people denounced the lumbermen for methods of which the people themselves were the chief beneficiaries.

The lumber industry has made some money, though by no means as much as the people suppose, by supplying the demand for cheap building material. If fifty years ago forestry methods had been adopted, the cost of lumber used in the settlement of the West would have been fifty to one hundred per cent more than it was, and who shall say to what extent this might not have retarded the development of the prairie regions?

The lack of conservation methods is today supplying the market with lumber at prices which barely cover the present cost of production, much less the costs which would accrue if forestry methods were adopted. Still the demand goes up for "cheaper lumber."

The hostility resulting from ignorance of conditions has led to the adoption of public policies which have hindered conservation, have made it almost impossible to adopt forestry methods and so have defeated themselves.

I do not believe that the people wish to do injustice to any class of their fellow citizens. I do not believe that the farmer would, if he understood the facts, consent to policies leading to the confiscation of any private property honestly acquired. He is too honest to take such a position, and if he were not honest he would feel that the title to his own property would thereby be endangered.

I think every lumber consumer who is capable of thought would say that he wanted lumber

only as cheaply as it could be furnished, with a reasonable profit to everyone legitimately engaged in its manufacture, transportation and merchandising, together with due regard for the future welfare of the country.

I believe that the people are prepared now to support and await the results of a careful, calm, thorough investigation of the relation of the lumber industry, as such, to the forest resources of the country, as well as to their own present welfare.

The National Conservation Commission was, before its activities were reported by Congress, engaged in preparing for such a study of this and other related questions. The scope of such an inquiry is wide. It involves the determination of what is practicable from the standpoint of the constitutional rights of the individual property owner; it involves the duties of not only the national government, but of the state toward any industry. This involves taxation and the whole subject of uniform state laws, as well as the development of a sound and effective state policy looking to the control of ignorant or reckless lumber operators.

Under Mr. Pinchot's regime in the Forest Service co-operation between the government and timber owners and lumber manufacturers made great advance. Now the public should demand that, in a matter of such importance as this, co-operation between the people, represented in the state and national governments, and the holders of four-fifths of the standing timber of the United States should be continued and advanced, to the end that by the same procedure public interests should be conserved and private rights respected, and thus the highest degree of general prosperity be fostered as well as the future be assured.

The people look to papers like the Record-Herald for leadership in the public study and discussion of such vital questions as this. They expect sanity and fairness from them and look to another class of journals for denunciation and appeals to prejudice and partisanship.

You, in turn, must look for technical information to agencies like the Forest Service, whose duty it is to make special study and investigations along this particular line, but you can guide the public in the direction of a sane and reasonable attitude toward these questions and all the great interests affected by them.

Out of such consideration as you are able to give these subjects will come good to the people, both in the present and for the future, and the foundation to be laid in right laws, and a correct public sentiment, for a more abiding prosperity.

### Lee Wilson & Co. to Rebuild Plant

Fire recently heavily damaged the band mill, resaw and veneer factory of Lee Wilson & Co. at Wilson, Ark., and it is stated that the firm will take immediate steps to replace the plant with a first-class operation on which will be expended about \$100,000. The fire destroyed the building and machinery, but all of the material on the yards, amounting to about 4,000,000 feet of logs and 3,000,000 feet of lumber, was saved. The company is under the necessity of cutting this stock as quickly as possible, and for this reason steps will be taken just as soon as the losses on the plant have been adjusted to get the new mill into running shape.

Lee Wilson & Co. have selling headquarters at Memphis, Tenn., and a large mill at Armored, Ark., in addition to the one at Wilson. The Armored plant is working full time, but it is such a great distance from this mill to Wilson that there is no possibility of working up the timber at the latter place at the Armored mill. The new plant will be equipped with automatic extinguishers, a new feature among country mills, where as a general rule there is a lack of water pressure. Lee Wilson & Co. have overcome this difficulty by establishing their own artesian well at this point.

## Obituary

### Sad Ending of W. A. Bonsack

Dispatches received at St. Louis from New Orleans on Friday evening, March 18, stated that W. A. Bonsack, the well-known lumberman of that city, was drowned in Lake Pontchartrain near New Orleans on that afternoon. Mr. Bonsack hired a boat and together with a fisherman put across the lake. The water was choppy and the fisherman says that Mr. Bonsack, while standing up in the boat, lost his balance and fell

latter in 1883, when the business was incorporated as the F. C. Bonsack Lumber Company.

In 1897 the company was reorganized as the Bonsack Lumber Company, and William A. Bonsack was made president. He held that position up to the time of his death. Mr. Bonsack was a director of the Lumbermen's Exchange and was formerly a director of the National Hardwood Lumber Association. He was a member of the Lumbermen's Club, the Mercantile Club, the Masonic order, the Legion of Honor and the Royal Arcanum.

Mr. Bonsack had been in New Orleans four days and wired his wife that he would leave for home on Saturday. A mysterious telegram was found in the pocket of his coat, reading, "Case postponed until October." Attaches of the Grunewald hotel, who had become acquainted with Mr. Bonsack, now imagine that he appeared to be worried over something.

Mr. Bonsack was one of the veteran lumbermen of St. Louis and was highly esteemed both at home and abroad, and his death will be sincerely mourned not only by those associated with him in business transactions but by a host of others who came in contact with him in association, musical and art work, in which he was much interested. He was an extremely affable and kindly man, and his mysterious passing is a matter of sincere regret.

### Death of F. J. Johnson

The lumber trade of the East was shocked to learn of the sudden death on the morning of March 4 of Frederick J. Johnson, eastern manager of Bliss & Van Auken of Saginaw, Mich., the Bliss-Cook Oak Company of Blissville, Ark., the Otter Creek Lumber Company of Otter Creek, Fla., all manufacturing lumber interests dominated by A. P. Bliss of Saginaw.

Mr. Johnson's death resulted from scarlet fever after an illness of only three days. He had recently returned from a trip to Florida and complained a few days afterward of a cold, but

Storage Company. Then he became connected with Bliss & Van Auken as salesman, and on the removal of the company's eastern offices to New York became manager.

Mr. Johnson was the soul of good fellowship and soon established a reputation for integrity and fair dealing that won the hearts of the New York and Philadelphia trade, and incidentally secured a large volume of business. His word has always been good with every man in the eastern trade and he was not only universally respected but loved by those with whom he did business. The funeral services and interment were held in Boston, his old home, on March 6. He is survived by a widow and daughter, to whom the RECORD extends its most sincere sympathy.

In such high regard was Mr. Johnson held in the Philadelphia market that a special resolution of condolence was passed concerning his demise by the Philadelphia Lumbermen's Exchange, and very likely a similar action will be taken by the New York Lumber Trade Association.

Mr. Johnson was very near and dear to the editor of HARDWOOD RECORD, who shared offices with him both at Philadelphia and New York for some years, who was his neighbor and friend in a social way in both cities. The writer spent two hours with him on August 12 in New York, and Mr. Johnson never appeared in better health and spirits in his life. It is hard to be reconciled to the fact that he has gone to the Great Beyond.

### Meeting Wagon Oak Exporters' Association

A meeting of the Wagon Oak Exporters' Association, which was organized last year to look after the interests of exporters of wagon oak planks, was held at Roanoke, Va., on March 10, to consider the demands made by foreign buyers. What the exporters desire above all things is a uniform set of inspection rules which will hold on all shipments made, and which will be recognized both by the domestic trade and by buyers abroad. At a meeting held in Baltimore in February, a set of tentative rules was formulated and these were submitted at the Roanoke meeting. They were thoroughly discussed before decisive action was finally taken. This set of rules will be sent to Liverpool for the approval of foreign buyers and it is expected that eventually representatives of both sides will be appointed to confer and work out an agreement satisfactory to all concerned.

The Liverpool Timber Trade Association, with which the American organization is negotiating for a satisfactory agreement in this matter, held a meeting at Liverpool on March 10, at which a report in regard to inspection of American wagon oak planks was presented for consideration. It was decided by the committee reporting that this matter be turned over to members of the association who are especially interested in this line of trade, and that they hold a special meeting to consider this subject. John H. Burrell, president of the Liverpool association, in moving the adoption of the report containing this recommendation said: "With regard to the inspection of American wagon oak planks, as you are doubtless aware, this trade is second in point of volume in the amount of goods imported to Liverpool from the United States, the import during 1909 reaching one and one-quarter million cubic feet, while in 1908 it nearly totaled two million. A request that the Liverpool trade should form some rules to bring about a more uniform inspection was sent by an American association of, I believe, considerable standing. The matter was considered, and a resolution in reference to the grading had been forwarded to the American association for their consideration." This controversy has continued for some time, with much inconvenience and financial loss to American exporters, and it is to be hoped that some satisfactory solution of the matter will be arrived at before long.

THE LATE W. A. BONSAK

overboard. The fisherman alleges he made an effort to rescue him, but the body never appeared.

In later dispatches an evident attempt is made to surround Mr. Bonsack's death with mystery, as the police are presuming the theory that he has not been drowned at all and is seeking seclusion. There is apparently no reason for this assumption, as his family relations are known to have been pleasant and he is not known to have been in any financial difficulties. Persistent efforts have been made to recover the body, but at last advices were unavailing.

There are several theories connected with the drowning of Mr. Bonsack. One is that he accidentally fell from the boat; another is that he contemplated suicide and jumped overboard; the third is that he was stricken with heart disease and fell into the water, and the fourth and unbelievable one is that he was not drowned at all. Mr. Bonsack had laid his coat and vest aside before the accident occurred, which was not unusual considering the warmth of the day. The boatman's head was turned when the accident occurred and he is not sure whether Mr. Bonsack fell or jumped into the water. A. A. Bonsack, a brother, left St. Louis on receipt of the telegram announcing the drowning and is now in New Orleans trying to unravel the mystery.

William Andrew Bonsack was born in St. Louis August 7, 1857. He was the son of Frederick C. and Catherine (Meiser) Bonsack. He was educated in the public schools of St. Louis and was married in 1884 to Miss Lulu Ringer. Besides his widow he is survived by two children, Adele and Marion.

Mr. Bonsack began his business career as a salesman for Williams & Alfred, lumber dealers, in 1879. Later he became a salesman for his father, F. C. Bonsack, until the death of the

THE LATE F. J. JOHNSON

was attacked by fever and his death resulted very shortly.

Mr. Johnson was about forty-five years old. He had been identified with the lumber trade of the East for a good many years. Ten years ago he went to Philadelphia from Boston as a salesman for W. H. Fritz & Co., where for several years he was at the head of the South End

## The Foreign Lumber Trade

The information embodied in this article was culled from various numbers of the Daily Consular and Trade Reports issued by the Bureau of Manufactures of the United States Department of Commerce and Labor.

In this connection Vice-Consul Paul Knabenshue of Belfast, Ireland, recently sent in a suggestion that is worth consideration by exporters. He brings forward a simple plan whereby the compilation of reports on foreign trade conditions as requested by exporters of specific products from this country may be considerably expedited.

Usually such requests are general and while the investigations might cover the subject in a thorough manner, in fact they usually give considerable valuable matter which is not especially solicited in the request, it often happens that information really required but not definitely requested is omitted. Mr. Knabenshue states that the Consular Service will be greatly aided in its work if such letters from exporters are put in the form of a number of specific questions such as the writer might ask if actually present.

### COLUMBIA

The lumber trade in Columbia is summarized in the report of Consul-General Jay White of Bogota, who reports that the populated districts all have abundant available supplies of timber to meet local requirements.

Inland freight rates are prohibitive so far as American timber shipments are concerned, though river and seaports place occasional foreign orders for lumber.

A few Pacific and Caribbean ports in which some dock and railroad timber, building and ship material is used offer the best available market for American products.

American woods must usually be impregnated or otherwise treated with preservatives to render them available for use.

Detailed maps containing a vast amount of information pertinent to the lumber industry in Columbia are available at the Bureau of Manufacture.

### AUSTRIA-HUNGARY

Merchandise from abroad, according to the report by Consul George M. Hotschick of Trieste, is discharged in a free port outside of that city. Here goods not to be shipped immediately may be stored in the government's warehouses, rents being charged according to duty. Duty is levied only when shipments leave the free port for inland points. If the cargo is consigned to be reexported it does not get inside of the city limits, but is reshipped directly from the free port and no duty charged. A large new harbor for nondutiable goods is soon to be opened. Here will be ample yards and sheds for the storage of a large amount of lumber. Timber is stored in the open at a cost of 1/10 cent for the equivalent of 220.4 pounds.

### PORTUGAL

Concerning the dock facilities at Lisbon, Consul-General Louis H. Aymé of that city writes as follows:

"There are no docks in Lisbon, all importers sending their own lighters to receive the goods when the vessels discharge their cargoes in the stream, and their own foremen and laborers to land and store the cargo when the discharge is alongside quay. All timber cargoes are discharged alongside the quay at Entrepoto da Santos, where the cargoes are separated and piled according to dimensions and measured by customs officers. Steamers drawing 21 feet can go alongside this quay and about 80 standards (standard=165 cubic feet) are discharged each day. Lumber is discharged alongside at the Santos quay, but staves are loaded into lighters in the stream. Staves constitute the largest

single item of import from the United States in the lumber trade."

### URUGUAY

Consul Frederic W. Goding, of Montevideo, in a report on the timber trade of Uruguay states that practically all the lumber used there is imported. He continues:

"Considerable quantities of walnut come from southern Europe and the United States, which is used in the local manufacture of furniture. Shipments of pine and other kinds of lumber are received from the United States, Brazil, Argentina and Paraguay, moldings being imported from Belgium, France and England. However, the importations from the United States exceed many times the combined imports from all other countries, and are composed of white pine, yellow pine and spruce principally.

"One consignment of 34,100 feet of hardwood arrived from West Australia last June, which, together with several shipments of railway sleepers to other River Plate ports, shows that Australians are awake to the value of this market. The only competing country of any magnitude is Brazil, whence come large shipments of local pine; but the lumber from that country is said to be much inferior to the North American article, rotting away in two or three years.

"The importation of lumber from the United States is increasing in quantity every year, and has reached such proportions as to merit careful attention.

### UNITED KINGDOM

American houses doing an export business with the Liverpool market operate chiefly through Liverpool brokers, of which there are a large number of reliable houses.

The general policy of the British trade is to extend long credit to customers. Six months' credit without security is often extended from brokers to merchants, who in turn sell to the consumers on the same terms.

Transactions in the Liverpool market come under one of three general classes, namely, (1) on cargo in full terms, (2) on ex-quay terms and (3) on yard or stored terms. Under the first heading most large transactions, usually in soft woods from this side, are grouped. Smaller transactions, usually in United States hardwoods, are, as a rule, under the ex-quay terms class, and in this case the shipper is considered to own the stock until it is landed and consequently must pay landing charges. Class three covers but few sales and relates to transactions in which the brokers find it more advisable to store lumber than to sell on ex-quay terms, and the shipper must pay all charges up to the time the stock is taken from storage. Storage charges usually amount to 4 cents per ton in the open and one-half more under cover. Landing charges include portage or proper sorting and distribution of the cargo on the dock, and a charge is made for hauling over the dock estate.

Outside of the courts there is no trade board of arbitration to settle disagreements between Liverpool merchants and brokers and the shippers in the United States. Often brokers are requested, as disinterested parties, to act as arbitrators, and in case this method does not satisfy both sides each appoints an arbitrator, who before acting choose a suitable umpire. Such umpires must not only be trade experts, but must be impartial and disinterested and are not easy to secure.

### GERMANY

Consul-General Robert C. Skinner at Hamburg is working to secure the establishment of a warehouse and lumber market in that place under American control and ownership, the object being to eliminate middlemen in the inland German trade. Efforts to reach this market by making through bills of lading have not proved feasible, as the barge rates to inland points are extremely

unsettled and railroad rates too high to warrant such shipments. It has always been difficult for American shippers to discount their drafts on foreign inland consignees at New York banks, as it is never a certainty that the shipment will meet the demands of German grading and terms. The American market on German soil would make it possible for the buyers to examine stocks before purchasing and hence eliminate this uncertainty.

American lumber is always sold cash against shipping documents. The ocean bill of lading must be delivered to the banker, as bills of American railroads are not regarded as conclusive proof that the cargo is really en route to Europe. Shipments reaching Germany enter the free zone, the consignee assuming payment of the duty in that country. Demurrage charges are levied three days after arrival.

Bonded storage warehouses, privately owned, take care of the overflow trade. J. F. Müller & Sohn have at present the only such warehouse for lumber and timber.

In addition to the regular private sales usually conducted on the cargo in full basis, J. F. Müller & Sohn conduct several auctions annually, sending out catalogs previously showing the stock to be sold. Brokers usually represent the German houses and receive 1 per cent on log sales and 1 1/4 per cent on sales of lumber. These auctions have an approximate average of \$100,000 in actual trade.

Trade disagreements are usually settled by two arbitrators, and if necessary a third is named by the Chamber of Commerce, whose judgment is final.

All Hamburg docks are state property and as such are leased to private concerns; for instance, the Hamburg-American Line, which is the only line having a regular service between that point and American seaports.

Quay rates are fixed by government tariff. The lightering concerns have special rates.

### Largest Order on Record

The Linderman Machine Company, Muskegon, Mich., has received contracts from the Paine Lumber Company of Oshkosh, Wis., for fifteen Automatic Dovetail Glue Jointers, which is undoubtedly the largest jointing machine order on record.

The dovetail method of jointing lumber has been in use at the Paine Lumber Company's plant during the last five years, making the famous "Korelock Door" which originated with the dovetail glue joint.

These machines are to be in two sizes, 3-foot machines to make rails and 8-foot machines for making stiles. The New Model Automatic Dovetail Glue Jointer has many new features that will increase the capacity and economize over the machines the Paine people are now using. These machines will be equipped with back guide attachment for jointing on narrow strips, magazine feeds for feeding short blocks, cut-off saws which will cut the stock to exact length as they are being fed into the machine.

It is estimated that the Paine Lumber Company is spending a quarter of a million dollars improving its large plant, which will be completed June 1. The company will then have in operation twenty Linderman Automatic Dovetail Glue Jointers, giving a capacity of more than 10,000 stock veneered doors per day. This vast expenditure will, undoubtedly, give the Paine company the largest equipment in the world for making veneered doors.

Considering that there is but one operation to complete a glue joint by the dovetail method, there are several operations eliminated, as gluing, jointing, clamping, unclamping, etc., and the work can be accomplished in a more satisfactory manner and with considerably less room than by other methods. It is further estimated that the saving in glue will be enough to pay the operating expenses of running the machines.

EDITOR

## News Miscellany

### Handle Men Organize

TO SHOW more fraternal feeling among handle manufacturers throughout the United States, representatives of about twenty leading handle concerns from Kentucky, Tennessee, Missouri, Kansas, Oklahoma, Texas and Arkansas met at Little Rock, Ark., on March 18 and formed an organization to be known as the Hickory Handle Manufacturers' Association.

Turner R. Clendinen, president of the Missouri Handle & Manufacturing Company of Atchison, Kan., one of the prime movers in the effort to bring the handle men into a national organization, was elected president of the organization. H. R. Fory of Timpson, Tex., president of the Timpson Handle Company, was elected vice-president, and J. E. Duffield, president of J. E. Duffield & Co., St. Louis, was chosen secretary and treasurer.

G. A. Trinler, general manager of the American Handle Company, Jonesboro, Ark., and W. E. Bruner, president of the National Handle Company, Almyra, Ark., with the above officers constitute the Executive Committee.

The handle men in attendance at this meeting

T. R. CLENDINEN, ATCHISON, KAS., PRESIDENT NEW HANDLE ASSOCIATION

represent companies with a combined output of 10,000 dozen handles daily, and valued at from \$7,000,000 to \$8,000,000 annually. The next meeting is to be held in Memphis, and by that date (not later than June 10) it is expected to have all handle manufacturers in the organization.

More economic grading and closer cutting of the supply to curtail waste were discussed at length. An effort will be made to educate domestic consumers to the fact that a handle may be better than it looks, and that often a hickory handle as serviceable as anything on the market can be secured at a cost far below that of the stock selected merely for its appearance. Measures of this sort are contemplated in order to get more stock out of the tree in the initial cutting.

There was much discussion also on trade ethics, and it was brought out that certain differences exist between the large and the small companies as to facilities for supplying the trade that cannot be overcome by reckless cutting of prices by the small mills.

The adoption of a new price list was another important step. This is an attempt to arrive at something standard in order to eliminate the confusion incident to multiplicity of lists. There is an advance in the new list over that of some mills heretofore obtaining, but it was argued that

the conditions in every way justify the increase.

It was brought out at the meeting that the ensuing year will undoubtedly be from twenty-five to thirty per cent better than last year on domestic trade, with all the export business that the manufacturers can handle. Even now many of the exporters are well supplied with orders and are buying everything that is loose in the market for the foreign trade.

Those in attendance at the meeting were:

J. T. Miller, Eldon Handle Co., Dardanelle, Ark.

W. E. Redwine, Success Handle Co., Success, Ark.

G. I. Dill, G. I. Dill Handle Co., Harrisburg, Ark.

Charles D. Gates, Turner, Day & Woolworth Handle Co., Louisville, Ky.

I. R. Hartzell, Hartzell Handle Co., Memphis, Tenn.

W. E. Bruner, National Handle Co., Almyra, Ark.

A. E. Loy, Frankfort Handle Manufacturing Co., Beebe, Ark.

Turner R. Clendinen, Missouri Handle & Manufacturing Co., Atchison, Kan.

J. E. Duffield, J. E. Duffield & Co., St. Louis, Mo.

R. W. Walker, Little Rock Handle Co., Little Rock, Ark.

W. B. Grant, Grant Manufacturing Co., Batesville, Ark.

C. H. Amos, Amos Bros. Handle Co., Poteau, Okla.

T. R. Kind, Ivory Handle Co., Hope, Ark.

H. R. Fory, Timpson Handle Co., Timpson, Tex.

G. A. Trinler, American Handle Co., Jonesboro, Ark.

Robert P. Sallee, Cotton Plant Manufacturing Co., Cotton Plant, Ark.

### Meeting Gulf Coast Exporters' Association

On March 11 at the Grunewald hotel, New Orleans, there was a meeting of the Gulf Coast Lumber Exporters' Association, which was largely given over to a discussion of inspection rules matters. The treasurer reported a balance of nearly \$900 after all February bills had been paid, which shows the healthy condition in which this organization now finds itself.

The first subject brought up for discussion was some minor changes in the official classification suggested by R. S. Somerville, chief inspector. The suggestion that there should be a list of definitions of defects published at the beginning of the classifications was referred to the Committee on Classification. Merchantable in boards, planks and deals was changed to show two-thirds heart on the face side and one-half heart surface on the opposite side. In the grade of kiln or air dried saps, usual South American or standard river Platte, an addition to the rules was made providing that the maximum knot allowed should not exceed one-half the width of the board. The sawn timber rule was changed by the addition of the word "some," so that the rule now reads "all sawn timber shall show some heart on all four sides, etc."

Two matters were referred to the Classification Committee—to define a grade of dimension for the South African trade between the grades of prime and merchantable, and the revision of the grade second class Cuban, as the present grade does not seem to cover the requirements of the market.

The plan to maintain foreign representation for the association, which was considered at the last annual meeting, was dropped. On motion of E. B. Holmes, the president was requested to appoint a new committee to report another plan.

Hans Forchheimer made a motion to create a grievance committee, which was adopted, and

the president requested to name such a committee.

The gathering was one of the most representative ever held by the association, and it was shown that the influence of the body is spreading rapidly and that its standard grades are beginning to be recognized in Europe and in other countries.

### Officers for Reorganized Nashville Club Elected

John W. Love of the well-known lumber firm of Love, Boyd & Co. at the spirited election held Saturday afternoon, March 19, at the rooms of the Board of Trade, was chosen president of the Nashville Lumbermen's Club, the reorganized association of Nashville lumbermen. Two full tickets were run in this election, and the "Selects," headed by Mr. Love, were victorious. The complete list of officers elected is as follows: President, John W. Love; vice-president, A. H. Card; secretary, F. G. Fetzner; treasurer, W. J. Cude; directors, Henderson Baker, A. B. Ransom, Hamilton Love, W. J. Wallace and J. H. Baird.

One hundred and thirty-five ballots were cast in the election, and from the time the polls were open at 4:30 o'clock until they closed two

JOHN W. LOVE, PRESIDENT REORGANIZED NASHVILLE CLUB

hours later there were busy times. Badges and streamers were everywhere in evidence and the lumbermen held full sway in the Board of Trade building.

Following the election the voters and candidates repaired to the rooms of the Builders' Exchange across the street in the Noel building, where a delightful spread prepared by Mrs. Anna Conger awaited their attention. It was here, while the spirit of good fellowship was at high tide, that the canvassing committee announced the winners. Of course, all the winners were immediately called upon for samples of eloquence and forensic venture, and everyone gave the crowd the best he had "in stock." Those present at the banquet were:

W. C. Smith.	T. H. Estes.
W. A. Binkley.	H. K. Wharton.
Olive White.	H. M. Greene.
E. M. Underhill.	John Eckstein.
J. R. McIlwaine.	William Dunlap.
L. Frank.	T. H. Dunlap.
F. C. Guthrie.	A. N. Trice.
J. S. Denton.	Al. C. Farris.
M. H. Holland.	B. Carmichael.
F. M. Hamilton.	W. M. Farris Jr.
C. T. Dews.	G. H. Cheeley.
Marvin M. Ransom.	A. B. Ransom.
E. A. Arnett.	J. W. Britton.
E. N. Ralston.	E. W. Pearson.
Charles M. Morford.	T. E. Crittenden.
J. H. Whorley.	Harold Patterson.
J. B. Jasper.	Fred Roth.

J. A. Hamilton.  
D. S. Hutchinson.  
W. J. Wallace.  
W. J. Wallace Jr.  
B. W. Kirkpatrick.  
Joseph C. Scheffer.  
C. R. Boyd.  
J. D. Smith.  
Will Smith.  
Frank G. Fetzer.  
O. F. Eagan.

L. D. Patterson.  
W. J. Cude.  
T. W. Washington.  
Hamilton Love.  
Henderson Baker.  
Charles E. Hunt.  
Thomas R. Lesueur.  
W. M. McFadden.  
William Andrews.  
C. D. McConnell.

### Memphis Lumbermen at Semi-Monthly Gathering

The regular semi-monthly meeting of the Lumbermen's Club of Memphis was held at the Hotel Gayoso March 19 at 1 o'clock. S. C. Major was in the chair. The regular luncheon was served and the attendance, while large, was rather less than usual at recent meetings.

The following new members were elected: H. L. Stern of the Dooley-Stern Lumber Company, active; A. W. Euler, in charge of the export department of Bennett & Witte, active; H. W. Wheeler of J. W. Wheeler & Co., associate.

A letter was read by Secretary Thompson from the Lamb-Fish Athletic Association of Charleston, Miss., challenging the team of the Lumbermen's Club for a game of ball any time after April 1. The writer of the letter asked that this matter be brought to the attention of Ralph Bennett, who was captain of the team during the past year. The game, if arranged, is to be played either at Memphis or Charleston. The association is composed of employees of the Lamb-Fish Lumber Company.

John W. McClure, first vice-president of the Lumbermen's Club, was elected manager of the team of that organization for the ensuing season. Ralph Bennett, who was captain during the past season, states that full organization will be perfected within the next few days.

Memphis now holds the championship for baseball, so far as lumberdom is concerned, and it proposes to defend its title against all comers. In fact, Mr. Bennett wishes it made known to the members of the baseball teams in Cincinnati, Chicago, St. Louis, Indianapolis, Nashville and other cities that the Memphis team is already beginning to practice and will be in fine shape for playing at an unusually early date.

### Monthly Meeting Philadelphia Lumbermen's Exchange

The monthly meeting of the Lumbermen's Exchange was held March 10. Herbert P. Robinson, president, in the chair.

The following committee was appointed for considering the adoption of "rules for grading spruce lumber," which the Spruce Manufacturers' Association has forwarded to the exchange for endorsement: Frank M. Gillingham, Edward B. Malone, S. A. Yorks, George F. Craig and C. E. Lloyd Jr.

A report was read by J. H. Lank, secretary, showing that during the past month thirty-one barges and schooners were entered in the docks of this vicinity laden with 11,284,940 feet of lumber, and six barges and schooners with 99,722 railroad ties.

The following were elected to membership in the exchange: J. H. Sheip; J. W. Turnbull Lumber Company; Coulbourn Brothers.

A resolution was adopted extending the heartfelt sympathy of the exchange to the bereaved families of the following members of the exchange who died recently: Stanley Louis Buck, William Nice Jr., Franklin A. Smith and Fred J. Johnson.

### First Annual Lumbermen's Club of New York

The first annual meeting of the Lumbermen's Club of New York was held at headquarters, 6 West Twenty-fourth street, on March 19, with a large attendance. The president's and secre-

tary's reports, covering the first eight months of the club's life, showed a total membership of 106 resident and 86 non-resident, and a generally satisfactory condition of affairs all around. The officers also made some important suggestions as to the future of the club, which were unanimously endorsed, viz.:

That the dues of resident members be increased to \$50 and non-residents to \$20, and that the Board of Governors proceed at once to carry out this recommendation and also such other plans as will broaden the club life and prestige in both the matter of membership and club facilities.

This practically means an expansion of the club on a scale commensurate with the prestige of the trade of the great Metropolitan district and an established effort to make it the leading lumbermen's club of the country.

The following gentlemen were unanimously elected to office:

For president, Waldron Williams; vice-president, William P. Youngs; secretary, Arthur E. Lane, and treasurer, George M. Stevens, Jr.

The Board of Governors to serve one year: I. N. Burdick, Patrick Moore and S. E. Slaymaker; to serve two years, J. S. Davis, E. F. Perry and C. O. Shepherd; to serve three years, W. A. Crombie, W. W. Lockwood and R. S. White.

### A New Bench Hand Planer

Realizing the many practical advantages of having a small hand-planer in the wood-shop, the J. A. Fay & Egan Company, Cincinnati, has designed a machine called the No. 254 Bench Hand Planer, which it believes will fill the requirements. Besides occupying very little space, this machine will accomplish a great variety of small work with greater rapidity and convenience than a larger type, and is as completely constructed as any of the largest machines.

Tables 6½ inches wide by 20 inches long are adjustable on long, gibbed inclines, free from vibration; the fence is arranged at a 45 degree angle. The cutter head bearings are of improved self-oiling type, the manufacturers' Safety Circular Cutter Heads being an additional feature. With each machine is furnished, when ordered, at slight extra cost, a bench box upon which it can be set. This box is open at the top to re-

ceive shavings, and is supplied with doors for their removal.

The Fay & Egan Company has just issued a descriptive circular of this machine, which it will be glad to mail on receipt of request at the home address, 414 to 434 West Front street, Cincinnati, O.

### Defiance Automatic Copying Lathe

The accompanying illustration shows the No. 0 Patent Automatic Copying Lathe, manufactured by the Defiance Machine Works, Defiance, O. This machine is the result of long and earnest effort on the part of the Defiance concern to supply the ever-increasing demand for a lathe capable of turning objects of irregular shape, and of reproducing exact fac-similes of delicate and intricate model with absolute and unerring accuracy; it can truthfully be said that this effort has materialized.

DEFIANCE NO. 0 COPYING LATHE

The lathe is especially designed for turning such articles as hames, side bars for saddles, hat blocks, golf stick heads, gun stocks, handles, spokes and similar articles up to 36 inches in length and 6 inches in diameter. An exact reproduction of any model, of any shape, is possible. In addition, either end may be made larger or smaller than that of the governing model, by a simple, quick adjustment. An attachment for turning both rights and lefts accurately from one model is furnished when especially ordered, at a nominal cost.

The machine is fitted with a heavy one-piece frame; the head spindles are fitted into long

FAY & EGAN NO. 254 BENCH HAND PLANER

connected bearings and are driven by cut gears; the tall spindles are opposite to and lined with the lead spindles, and have both horizontal and right-angle adjustments; the cutter head carriage is thoroughly gibbed to the main frame; automatically engaged and disengaged frictions start and stop the feed; the cutter head and guide-roll frame vibrates in a path corresponding to the shape of the model; both right and left hand cutters are provided to feed both ways; there are five changes of feed from one-eighth inch to three eighths inch, with intervals of one-sixteenth inch, and at the end of cut the feed is automatically released for the next cut.

The machine requires one and a half horse power to operate, and occupies a floor space of 34x86 inches. A descriptive circular can be obtained from the manufacturer upon request.

### Muskegon's "Sawdust"

Who among those who lived in Muskegon, Mich., the "Queen Lumber City of the World," in the late seventies and early eighties does not remember the "Sawdust" and the dump carts that were constantly arriving, discharging their contents and departing for another load?

Many acres were covered with the refuse from the mills—sawdust, bark, edgings, slabs, etc.

Neither are the old-timers likely to forget the fires that used to break out occasionally in this district, which burned for weeks, despite the best efforts of the fire department.

In our own day sawdust is too valuable a by-product to waste in this wholesale fashion. It is used to run the plant, furnishing all the fuel needed, and enabling the mill to make a handsome profit from the sale of the slabs, edgings and blocks. Of course, this usually necessitates the installation of some device like the Gordon hollow blast grate, which prevents the sawdust from settling compactly on the grate and causes it to burn freely. The manufacturers, the Gordon Hollow Blast Grate Company of Greenville, Mich., certainly performed a valuable service for manufacturers of lumber when they placed this grate on the market.

### Miscellaneous Notes

The Rib Lake Lumber Company is running two shifts at its plant at Rib Lake, Wis. It is cutting hardwood exclusively and its mill will undoubtedly be run continuously until midsummer.

O. L. Bennett is planning the erection of a saw and planing mill and box and spoke factory at Norwood, La.

A new concern at Asheville, N. C., is the W. T. Hill Piano Company, incorporated by W. T. Hill and others with a capital stock of \$100,000.

The Minnesota Woodenware Company will double the capacity of its plant at Cohasset, Minn.

Detroit, Mich., is the location of the new Wayne Cabinet Company, incorporated with a capital stock of \$20,000.

B. H. Cooley will engage in the manufacture of wood novelties, boxes, crates, etc., at Campbell's Port, Wis. The business will be operated under the style of the Wood Products Company.

A new concern at Oklahoma City, Okla., is the Miller Walnut Company, which will operate a sawmill, manufacturing walnut lumber.

John W. Henniger of Chilhowie, Va., has recently closed a deal with C. C. English of Bristol, representing the heirs of the late George D. Taylor, for a tract of 6,000,000 feet of timber in Happy Valley, Carter County, Tenn. The consideration was \$40,000. The timber on the property consists principally of oak and poplar of excellent quality and Mr. Taylor announces that he will install at once a mill to develop the

property. The mill will be of large size and up-to-date in character and will be located on the East Tennessee and North Carolina Railroad.

The A. Wyckoff & Son Company has recently started to manufacture water-pipe from cypress, at its new factory at Alexandria, La. The concern has been turning out a thousand feet of water-pipe of all sizes per day. As soon as electric lighting can be installed, both day and night shifts will be run. Orders have been booked for pipe to supply several towns in Oklahoma and Texas. The town of Prior, Okla., is installing seven miles of pipe manufactured by this concern. It is claimed that wooden pipe has a longer period of efficiency than the common iron type. All lengths and sizes are manufactured, varying from two to eight feet in length, and from two to forty-eight inches in diameter. The construction is similar to that of hollow wooden columns.

Webster & Whipple, prominent wholesale concern with headquarters in the Lumber Exchange, Minneapolis, announce that they have recently added a hardwood department to their business. Heretofore, they had made a specialty of factory stock, although catering also to the yard trade of the retail dealer. For the present the concern will confine itself to northern hardwoods, although later it is possible that it will also handle southern woods. W. H. Kemper, Jr., will have charge of the hardwood end of the business. He was formerly with the Mason-Donaldson Lumber Company at Rhinelander, Wis., and has a wide acquaintance among the hardwood trade of that territory.

The Birch Boom & Lumber Company is the name of a new concern which recently started operations at Glendon, W. Va. The officers are J. C. Remage, president; R. H. Pembroke, secretary, and S. Wiseman, treasurer. They own about 2,000,000 feet of oak, hemlock and poplar, and also have access to twenty-five or thirty million feet of timber on adjacent property, so that they are well supplied with material to run their mill, which has a daily capacity of 20,000 feet.

The Tennessee Lumber Company was recently incorporated with \$50,000 capital stock to deal in and manufacture hardwood and other lumber. The company is said to be in possession of a good tract of timber on which its mill will be erected. The incorporators are T. B. Johnson, George W. Killebrew, Johnson Bransford, A. H. Robinson and Robert Lusk.

The Highland Lumber Company was recently incorporated at Ironton, O., with \$30,000 capital stock. C. A. Hutsinpillar and others are named as the incorporators.

The Oscar Gartner Company, exporter of hardwood and pitch pine, which for years has been located at New Orleans, La., will move to Galveston, Tex., shortly. Officials of the company state that this change is being made because the wharves at New Orleans are so often congested that the company's shipments cannot be cared for promptly, thus necessitating increased charges for cars in which the lumber has to remain stored until wharf space can be secured. The company expects to be established in its new location early next month. A new wharf is being built, primarily for the lumber interests of New Orleans, which it is expected will be completed about the end of April.

Ioshall & McDonald Brothers, with headquarters in the Hibernia Bank Building, New Orleans, have purchased additional timber at Eola, La., where their mill is located. This will give the concern a three years' supply for its sawmill, which was put into operation February 7. The equipment of the plant consists of an eight-foot band mill which cuts 25,000 feet a day. The company turns out rough lumber only. The timber on the property recently purchased consists principally of oak, ash and cypress, and is estimated to cut 15,000,000 feet.

The Panama-American Land & Lumber Company of Peoria, Ill., which owns a 75,000-acre tract of mahogany timber in Panama, recently purchased the mill operated at Panther, W. Va., by the W. M. Ritter Lumber Company and shipped it to Panama, where the concern is building a large and up-to-date mill to cut a large tract of timber. The mill just purchased was originally built by Saginaw, Mich., capitalists and later leased by the W. M. Ritter Lumber Company. The mill was rebuilt a number of times, having had several fires.

The Morris Broom Company has been organized with a capital stock of \$5,000 at Rives, Ky. J. H. Shore, B. J. Wade and others are interested.

A tract of five acres of land has been purchased by Messrs. Hall & Polk of Troy, Tenn., on which will be erected a mill to cut hickory.

Work on a building at Dalton, Ga., to be used as a hub and spoke factory will begin shortly by the M. C. Blanchard Company of Spring City, Tenn.

Fire which destroyed the curtain pole factory of the Edward Reos Company at Paducah, Ky., damaged property worth \$44,000. The loss was well covered by insurance.

The Perkins Land & Lumber Company is a new concern at Memphis, Ark. L. E. Brown is president of the company, which is capitalized at \$25,000.

The M. B. Farrin Lumber Company recently increased its capital stock from \$500,000 to \$600,000. This is one of the largest hardwood institutions at that important hardwood center, Cincinnati, O.

The R. S. Coryell Company, well-known shippers of spruce, hemlock and hardwood lumber and red cedar siding and shingles, with headquarters at Newark, N. J., has opened a branch office at Halifax, Nova Scotia.

The Lally Column Company is a new concern at Chicago. It has \$100,000 capital.

The American Lumber Company has been organized by R. F. Benson and others at Madison, Ind. The company has a capital of \$10,000.

J. A. Mann of Burnside, Ky., is contemplating the purchase of the Smith lumber plant at Fullerton, Ky. This he expects to convert into a spoke and rim factory. Mr. Mann has a large plant at Burnside.

The Carriage Woodstock Company of Owensboro, Ky., is planning the erection of a two-story addition to its plant to be devoted to the manufacture of automobiles.

Rapid progress is being made on the mill being erected by the Diamond Lumber Company at Green Bay, Wis. The plant will be equipped with two 14" band mills and one 12" perpendicular resaw, as well as shingle and lathe machinery.

H. E. Shadel is one of the incorporators of the Morgan Lumber and Manufacturing Company recently organized at Charleston, W. Va., with \$100,000 capital stock.

The Vermont Butter Tub Company, Barton, Vt., has been organized by E. W. Chandler of Oak Park, Ill., C. T. Hall, Montgomery Center, Vt., and others. The capital stock is \$40,000.

The T. H. T. Motor Company has been organized at Detroit, Mich., with a capital stock of \$100,000.

The Davis Piano & Player Manufacturing Company, Inc., is a new concern at Birmingham, Ala. The company has \$100,000 capital stock and J. W. Davis is president.

The French Broad Manufacturing Company of Asheville, N. C., has contracted with R. M. Ford of New York City for all the axe handles it manufactures. These will be made from Mountain hickory and are intended for export. This concern, it is said, is exporting handles made of Mountain hickory to South America and that the

goods is meeting with the approval of the trade there.

The Reuter Hub & Spoke Company of Dexter, Mo., has just completed the rebuilding of its factory, which was destroyed by fire last September. The new structure is larger than the old one and is equipped with a splendid line of new machinery. The concern is one of the largest manufacturers of spokes and hubs in the country, and is located so that it has access to excellent oak and hickory timber.

Work has been started on a new factory for the Leathers Handle Factory at Dickson, Tenn. The new plant will be ready for operation shortly.

The Federal Tool & Supply Company, manufacturer of handles, woodenware and tools at Alton, Ill., recently remodeled its factory and is now operating full force. Its present output is 500 dozen handles per day.

The LaPierre-Sawyer Handle Company of Kansas City, Mo., has increased its capital stock from \$12,000 to \$25,000.

The Van Buren Lumber & Tie Company, recently incorporated with \$50,000 capital, will be located at Van Buren, Mo.

It is reported that Fanny M. Zearing has been appointed receiver of the Stoneman-Zearing Lumber Company of De Valls Bluff, Ark.

The Hendersonville Column Company is a new concern at Hendersonville, N. C. It has \$10,000 capital.

The Hale-McAdams Wheel Company has been organized at Cleveland, O., with \$50,000 capital.

The Press-Wells Company has been organized at Streator, Ill., to manufacture washing machines. The company has a capital stock of \$10,000.

The Mount Kisco Woodworking Company has been incorporated at Mount Kisco, N. Y., with \$25,000 capital stock.

The Holly Lumber Company's mill at Pickens, W. Va., turning out band-sawed oak, poplar, basswood, etc., was started up last week for the season's run, and will cut 40,000 feet of lumber daily. The company's main selling office is located at New Haven, Conn.

D. L. Arnold of D. L. Arnold & Co., Jane Lew, W. Va., announces that he has assumed control of the Elkhurst Planing Mill plant, formerly operated by D. S. Collins. His address in the future will be Yankee Dam, Clay county, W. Va.

Two deeds, filed in St. Louis, Mo., March 10, which convey to C. F. Liebke, president of the C. F. Liebke Hardwood Mill & Lumber Company, two large parcels of North St. Louis real estate, are missing links to a large tract of some of the most valuable switching property in that city, and the deal marks the culmination of ten years of effort on the part of Mr. Liebke, who is one of the prominent lumbermen of St. Louis, to acquire this property. The real estate just bought is contiguous to that already owned by Mr. Liebke about his large mill in North St. Louis, and the purchase will give him greater facilities in the operation of his mill.

At a meeting of the stockholders and directors of the Prescott Company, held at the offices in Menominee, Mich., a reorganization of the company was effected and new officers and directors were elected. The capital stock of the concern was increased from \$150,000 to \$450,000, fully paid in. Edward L. Prescott and Sumner T. Prescott, vice-president and treasurer respectively, have withdrawn from the company. Loren Prescott resigned as secretary and was elected vice-president. E. B. Cottrill of Milwaukee, former general manager of the Wisconsin Telephone Company, was elected secretary and treasurer. D. Clint Prescott was elected president. Directors: D. Clint Prescott, Chicago; Loren Prescott, Menominee; G. A. Blesch, Menominee; E. B. Cottrill, Milwaukee, and P. M. Tallen, Milwaukee.

Goodman & Kennedy, a new lumber firm at

Cincinnati, O., recently purchased land fronting on L'Hommedieu street and the C., H. & D. railroad tracks for mill and yard purposes. The firm will manufacture chair dimension stock and also have a hardwood lumber yard. Mr. Goodman formerly was with the Licking Lumber Company and his partner until recently operated at Williamsburg, O. The improvements will cost about \$5,000.

As a result of the suit against the St. Louis Southwestern Railway Company, in which the St. Louis Walnut Company was the complainant, the rates on walnut logs in carload lots from

Weiner and St. Francis, Ark., and intermediate points to St. Louis, Ill., were found unreasonable and consequently reduced.

Moses Grey of Pokagon township, Cass county, Mich., evidently believes in reforestation and is enthusiastic enough to practice his belief. Last fall he set out two fields consisting of seventeen acres to young walnut trees. This is undoubtedly the first work of the kind of any pretensions that has ever been done in the county. Mr. Grey is almost seventy-five years old and has been a resident of Pokagon township for forty years.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

At a recent meeting of the Board of Directors of the Chicago Hardwood Lumber Exchange, President Brown appointed a committee composed of F. B. McMullen, chairman, J. S. Benedict and W. E. Trainer to meet with similar committees from the two other Chicago organizations, which are considered in the negotiations for consolidation. A conference will be arranged at the earliest possible date and a report will probably be submitted at the annual meeting to be held Saturday, March 26, at the La Salle hotel.

An order was recently delivered in Chicago for 600,000 feet of Balm of Gilead, a variety of balsam poplar, to be used as boxboards in place of cottonwood. The shipment came from the northern hardwood forests and brought \$16 per thousand feet.

The Sargent Lumber Company reports an excellent business at its new quarters, 812 Great Northern building. This concern was established in 1895, and incorporated in 1899, to engage in a wholesale hardwood and yellow pine business. The officers are Paul B. Hamlin, president, and Edward Browne, vice-president and general manager.

W. D. Walker, who does a mahogany and general hardwood business at 133 La Salle street, is back from a pleasure trip in the Black Hills of Dakota. Mr. Walker reports excellent fishing and hunting, but says he knows of but two planing mills in the entire country which he visited.

F. B. Sprague of the F. B. Sprague Lumber Company, First National Bank building, recently took a trip to Memphis. He speaks very highly of trade conditions in that city, and of the work being accomplished by the local lumber associations, but says that he found prices almost prohibitive.

Edwin D. Johnson of the Old Colony building, formerly a dealer in pine and hardwood, has changed his organization, which will henceforth be known as the Edwin D. Johnson Lumber Company. Under this name, the concern will cut out the yellow pine business and go in only for northern pine and hardwood. The incorporators are L. E. Brown, Edwin D. Johnson and D. L. Johnson. The capital stock is \$10,000.

G. C. Pratt of the G. C. Pratt Lumber & Tie Company, Fort Dearborn building, is at present on a business trip through the lumber section of the South.

D. K. Jeffris of the Chicago Car Lumber Company, which has offices in the Pullman building, reports favorable news from his brother, who is enjoying a European tour. Mr. Jeffris states that the manufacture of steel cars is becoming a serious question with the dealers in wood car stock.

W. E. Trainer of the Trainer Brothers Lumber Company has left for a trip to West Baden, where he will enjoy the baths for a week or ten days.

O. R. Menefee, head of the Menefee Brothers

Lumber Company, Fort Worth, Tex., was a recent visitor and reports that the yellow pine movement in his section is slow and prices, especially on dimension stock, are weakening.

W. W. Dings, secretary and treasurer of the Garetson-Greaser Lumber Company, has given up his temporary office in the Fisher building, and will discontinue, for the present at least, the Chicago branch of his concern. This action is the result of successful efforts on the part of this company to dispose of its surplus stock of dry lumber.

W. L. Hall, assistant forester of the United States Forest Service, stopped off at Chicago on March 12, on his way to Washington from the Forest Products Laboratory at Madison, Wis. In describing this new building Mr. Hall said that it will cost approximately \$60,000, and will soon be ready for occupancy. The laboratory will be equipped with modern machinery for timber testing and wood preservation, and also for testing the adaptability of the various woods for the manufacture of paper pulp and for any other uses which might be suggested.

Shortly after midnight of March 23, fire started in an overheated dry kiln in the veneer room of the P. A. Starck Piano Company's factory at West Lake street and Forty-ninth avenue, Chicago, and destroyed the factory building and the adjacent lumber yards. Loss is estimated at \$400,000. The flames spread to the lumber yards of the Edward Hines Lumber Company to the north and west of the factory, but the fire was checked in the big yards and no serious damage was done there. The fire tied up traffic on the Oak Park elevated lines for several hours.

The editor of HARDWOOD RECORD will deliver a lecture on Forest Conservation and Lumbering illustrated by stereopticon views, at the First Presbyterian church, Oak Park, on the evening of Monday, April 11.

T. S. Estabrook, president of the Estabrook-Skeele Lumber Company, Fisher building, Chicago, is just back from an extended trip in the southern country, where he has visited his several sawmills. Mr. Estabrook says the entire South is overrun with lumber buyers and that little good stock is obtainable.

Victor Thrane and Wood Beal, junior partners of the big timber land house of J. D. Lacey & Co., Chicago, have been sojourning for some days at French Lick Springs, Ind. Both these gentlemen had a busy and strenuous winter's work, and this is the first opportunity they have had for a few days' rest.

The RECORD was favored with a call on March 10 by R. S. Cooper of the Briggs & Cooper Company, Ltd., of Saginaw, Mich.

Grace M. Corwin, recently trading in lumber business locally under the name of the Corwin Lumber Company, is an applicant for discharge in bankruptcy, and the court orders that a hearing be had on the same on April 4 in the United States court rooms, Government building.

L. B. Cheatham, dealer in timber lands, Jackson, Miss., was a Chicago visitor during the week.

Since March 1 the general offices of the Tug

River Lumber Company, the Rockcastle Lumber Company, Inc., and the C. L. Ritter Lumber Company, Inc., have all been located in the Fredrick building, Huntington, W. Va., instead of Bristol, Tenn., as heretofore.

The RECORD is advised that Homer A. Ocorr has returned to the presidency of the C. H. Rugg Company, manufacturer of sash, doors and blinds and interior millwork, at Rochester, N. Y., since the death of Clarence H. Rugg, which occurred last December.

The Monarch Lumber Company, Philadelphia, advises that it has secured the timber holdings of the Laurel Fork Lumber Company in Haywood county, North Carolina, consisting of ash, birch, basswood, cherry, butternut, oak, poplar, etc., and an up-to-date band mill and logging railroad. This will increase the source of supply of this company to a marked extent and put it in good position in the eastern market.

White Brothers, the well-known hardwood lumbermen of San Francisco, advise that they have just received a large importation of clear Siam teak planks and have a cargo of teak logs due to arrive within a few days. Teak is one of the highest priced woods produced, and is principally used in ship building, but is also used to some extent for interior trim.

The RECORD is indebted to H. M. Spain, timber estimator of Memphis, for a blue print map of the Yazoo valley log producing country. The territory covered is the source of supply for about ninety per cent of the hardwood logs manufactured in Memphis, and the map shows the freight rate from all the principal shipping points to Memphis. The rates shown indicate the reshipment rate obtained by shipping the logs in and out of Memphis over the same line, and should be of material value to Memphis lumber manufacturers.

R. M. Carrier, president of the Hardwood Manufacturers' Association, was a Chicago visitor on March 23, and left on that evening for his Sardis, Miss., mill.

## NEW YORK

A petition in bankruptcy has been filed against Max G. Rieser of 427 East Fifty-seventh street, sole owner of the large cabinet and trim business of William Clearman & Co. of this city, alleging that he is insolvent and made preferential payment.

A petition in bankruptcy has also been filed against Goldman & Parkin, mill work manufacturers of 561-3 Watkins street, Brooklyn. Paul Gorman has been appointed receiver.

The Charles F. Fischer Lumber Company, large specialists of kiln dried hardwood flooring, with office and yard at 1920 Park avenue, Manhattan, has recently completed another up-to-date fireproof dry kiln with a capacity of 20,000 feet per week. The kiln is built upon most modern and efficient lines, the stock first being steamed and then dried with a hot air blower system.

Frederick J. Johnson, for many years the popular and able local representative of Bliss & Van Auken, large manufacturers of yellow pine and oak and maple flooring, headquarters Saginaw, Mich., died suddenly from scarlet fever at his residence in this city on March 4, after an illness of only two or three days. Mr. Johnson was identified with the lumber industry for a great many years, starting originally with the South End Storage Company of Boston. From there he went to Philadelphia in the late eighties and became associated with W. H. Fritz & Co. A few years later he joined Bliss & Van Auken as manager of their Philadelphia sales office, and in June, 1903, came to take up similar duties at the New York office of the same company, in which connection he had been continuously employed up to the time of his death. Mr. Johnson is survived by a widow and one daughter, to whom the sympathy of a large circle of friends goes out in their bereavement. The funeral services

and interment were held at Boston, Mass., on the 6th.

E. W. McClave, head of the large yellow pine house of E. W. McClave & Son, Harrison, N. J., and 18 Broadway, New York, recently died at his home in this city after a lingering illness. He was seventy-three years old. For sixty years Mr. McClave had been almost continuously identified with the lumber trade of the Metropolitan district, both at Newark and New York. During his many years of association with the trade Mr. McClave had many setbacks, but through dogged perseverance and high business ability he had amassed a comfortable fortune at the time of his death. The business will be continued by his surviving sons and partners, Messrs. Rowland, William Parke, Wilkes, Donald and Kenneth McClave.

W. D. Magovern, who so ably looks after the local interests of the Thomas Forman Company, big flooring manufacturers of Detroit, Mich., has in addition to these activities just leased personally an area of ground west of the flooring warehouse, on which he is arranging an up-to-date storage yard for public use. The yard is exceptionally well located for that purpose.

A. R. Sax, A. R. Sax Lumber Company, 18 Broadway, Manhattan, and branches at Savannah and Jacksonville, has just returned from a stay of several weeks at southern mill points.

Harry S. Lafond has bought out the interest of his partner, W. A. Thomas of the wholesale house of Lafond & Thomas, 12 Broadway, and has merged that business with the Sea Coast Lumber Company, large cypress operators of 1 Madison avenue, and will in future manage the yellow pine department of that company. Concurrently the Sea Coast Lumber Company has increased its capital from \$100,000 to \$150,000 and has elected C. W. Brounson, manager of the company, as secretary. The addition of yellow pine to the large cypress mills and outputs controlled by the company will undoubtedly be appreciated by its customers in the trade.

Uptegrove & Beckwith, well-known veneer and lumber house at the foot of East Tenth street, New York City, have incorporated the business under the laws of the state of New York under the same style with a capital of \$100,000. No other change is comprehended.

George P. DeWitt, head of the DeWitt Lumber Company, wholesale hardwoods, 1 Madison avenue, has just returned from a trip to the Indiana, Kentucky, Tennessee and Virginia mills, where he closed deals for some choice stocks in plain and quartered oak and other hardwoods. The company finds trade conditions very good with the demand especially good for high-grade stock, with low-grade stock improving steadily.

## BUFFALO

At the annual meeting of the Buffalo Lumber Exchange, held on March 12, the following board of directors were elected: M. M. Wall, Knowlton Mixer, I. N. Stewart, A. E. Davenport, Peter McNeil, W. A. Ferrin, G. Elias, H. S. Janes, B. H. Hurd, H. F. Taylor, J. S. Tyler. From this list were chosen: Maurice M. Wall, president; Knowlton Mixer, vice-president, and John S. Tyler, secretary and treasurer.

The annual report of Secretary Tyler to the Lumber Exchange showed receipts last year of 90,190,000 feet of all lumber by lake, an increase of 14,739,000 feet, and a receipt of 118,472,000 feet of all lumber by rail, of which 70,462,000 feet was hardwood. The entire receipts, with shingles, lath and ties reckoned as lumber, were 272,304,000 feet, an increase of 21,304,000 feet. All shipments were 212,296,000 feet, an increase of 17,001,000 feet. There was in yard at the end of last year 150,418,500 feet, an increase of 129,000 feet. Of this 54,168,000 feet were hardwood, an increase of 1,034,000 feet.

The organization of the Manufacturers' Lumber Company, which includes all the interests of

the Hugh McLean companies and those of Senator Edwards of Ottawa, is explained to be merely the establishment of a sales headquarters in New York and has nothing further to do with these companies, being in no sense a merger. Senator Edwards is president and Hugh McLean is first vice-president.

The yard of the Standard Hardwood Lumber Company is filling up fast with oak and other stock from the South, a long string of cars being on the spot waiting to be discharged. There is business enough in sight to take care of it all.

F. W. Vetter is still finding the trade good enough to take care of the new lumber which was lately gathered in down the eastern slope of Virginia and southward. He looks for all of the former good trade to keep up throughout this year.

J. B. Wall recently returned from a short sojourn at Mount Clemens and is prepared to take up his special work again at the Blasdell mill, where new veneer machinery has lately been added to the company's table mill.

Special time spent on the affairs of his Pascola Lumber Company in Missouri has occupied F. A. Beyer for some time, but he has that arranged now and is back to the county treasurer's office for a while.

I. N. Stewart & Co. find low-grade cherry one of their best sellers, having already shipped out more this year than they did in a great part of last year. It is pretty hard to keep an assortment of chestnut now, but they have it.

There is no talk of slow trade from O. E. Yeager, who has had so much to do all the year, shipping as well as receiving, that he is barely caught up now. Sales have been especially good all the year and promise to continue.

The yard of G. Elias & Brother is making the most of heavy timber and door mill work at this time of the year, for the building industry is reviving and promises to do well all summer.

Scatcherd & Son have gone on selling close up to the saw right along, especially oak, and only complain because their Memphis mills are not able to turn out enough to meet the demand.

The stock of T. Sullivan & Co. has gone off fast all winter and all there seems to be to complain of is that the Michigan hardwood mills are so steep in their prices that a new territory may have to be taken up.

A. Miller is getting hold of a lot of new oak and other hardwood stock in the South and keeping his stock up, but he does not go to Canada just now for lumber, as tariff relations with that country are not very promising.

The Hugh McLean lumber interests are not disturbed over anything now but the supply of stock, especially oak. They are obliged to caution their salesmen in only one direction and that is the selling of more stock than can be delivered.

## PHILADELPHIA

Mr. and Mrs. Samuel H. Shearer will close their town house, 4930 Cedar avenue, and open their summer home in North Wales on April 3.

The Jersey Shore Herald says a new car repair shop, almost doubling the size of the present repair shops, will be erected at Avis this summer. The building will be 200 by 350 feet in size and will cost \$350,000. The number of employees will be greatly increased.

The J. G. Brill Car Works have \$3,000,000 worth of contracts on hand.

It is learned from the Harrisburg Telegraph that a number of rafts will descend the Susquehanna this spring. Lumber has been cut on many of the upper reaches of the stream and the river men are talking about some big ones putting in an appearance before long. The rafts will come down before the water falls much lower, as they can go over the Clark's Ferry and

other dams without trouble. In old days many rafts passed down in the sixty days after March 1, but they are a rare sight in latter years.

The Berwick car shops keep 5,000 men busy.

The state of Pennsylvania has filed for record a deed for land in McHenry township, Lycoming county, purchased from the heirs of the late Samuel Wilson. The consideration was \$1,319.76. The land will become a part of the state forest reserve.

The Crain Pump & Lumber Company has purchased a tract of about two acres on the north side of Lacony street, 200 feet west of Orthodox street, on which it will build a large factory.

On March 4 the J. H. Bright Lumber Company's planing mill and plant, Hazleton, Pa., was damaged by fire to the extent of \$30,000.

The Central Planing Mills Company's plant and J. S. Bare's planing mill plant, Huntingdon, Pa., were destroyed by fire March 18. The loss on the Central planing mill was \$50,000; on J. S. Bare's planing mill plant, \$15,000.

The Nant-Y-Glo Lumber Company, Nant-Y-Glo, was incorporated under Pennsylvania laws March 9 with a capital of \$5,000.

The Conemaugh Lumber Company, Johnstown, obtained charter under Pennsylvania laws on March 9. It is capitalized at \$25,000.

The Bartley-Cary Lumber Company, Flanders, obtained a charter under New Jersey laws on March 9; capital, \$20,000.

The Edwards Industrial Society Company, Camden, N. J., to engage in manufacturing and selling pianos and organs, has been incorporated with a capital of \$100,000. The incorporators are William Edwards, V. A. Murray and J. R. Bradley.

Franklin A. Smith, who was engaged in the lumber business in Philadelphia in his own name, and was also president of the Producers' Lumber Company of Philadelphia, died on March 8, aged 71 years. He is survived by two sons, J. Edward Smith and Franklin A. Smith, Jr., vice-president of the Lumbermen's Exchange of Philadelphia and at one time secretary and treasurer of the Producers' Lumber Company; and a daughter, Mrs. Earle C. Rice. Mr. Smith's wife died on February 16, just twenty days previous to his own death. Franklin A. Smith was a man of staunch integrity and upright dealing, and his death is much deplored among his many friends. The trade is a loser in the removal of a man of his activity and capability.

## PITTSBURG

The Acorn Lumber Company manages to pick off a few cars of nice hardwood every little while and, when the RECORD man called, President Harry Dombhoff reported the sale of six cars of mixed hardwood to yard trade. His business with the retailers in Ohio and western Pennsylvania is gaining right along.

William R. Cornelius has been spending a few days in Cincinnati and West Virginia arranging for more stocks and lining up some prospective changes in his business. He is firm in the belief that hardwood prices are going to come up.

C. G. Freck, president of the Pennsylvania Lumber Company at Sheffield, Pa., dropped off for a few days' stay in town this week.

The L. L. Satler Lumber Company is running its mill at Blackstone, W. Va., steadily, but complains about the bad roads in that vicinity.

A. C. Opperman of William H. Schuette & Co. has been making quite a tour through the Northwest. The company's spring business is now coming in in good form.

The Johnston furniture factory at Towanda, Pa., which was burned recently with a loss of \$10,000, is likely to be rebuilt. A movement has been started at Le Raysville, Pa., to secure the plant and \$5,000 has been subscribed.

Manager E. H. Shreiner of the Goodwin Lumber Company is down at the hardwood mills in

West Virginia this week. He is greatly encouraged by the increase in yard trade.

A. G. Breitwieser, president of the Breitwieser & Wilson Company, is spending a few weeks in Cuba with his wife. This concern is making good headway in the manufacturing and industrial trade.

The Pittsburg Hardwood Door Company, under the management of J. C. Schofield, is one of the lively concerns in the city this spring. Its outlook for 1910 trade is first class and it is carrying heavier stocks than ever before to satisfy the popular demand for its doors.

The Southern States Lumber Company, which was recently formed by the Flint, Erving & Stoner interests of this city, has 8,500 acres of timber in Burnwell county, South Carolina, and will have its general offices in this city. Its operations will be started shortly, as it already has a railroad which will reach its southern terminus at Dunbarton, S. C.

J. W. Hulse of the McDonald Lumber Company's force has returned from a trip through the South. He reports stocks broken badly at many of the mills. The McDonald company has been making lath quite a leader of late and its efforts have been well rewarded.

H. D. Butler of the Furnace Run Saw Mill & Lumber Company is working the Ohio trade this week to good advantage. President Nelson Bell announces that hardwood affairs look good and that nearly every grade of good hardwood is in demand.

S. A. Seamans, manager of the C. P. Caughey Lumber Company, is hustling hard to keep in touch with the different government projects which are coming up here this spring on the three rivers. He has several small oak mills cutting white oak stock within the Pittsburg freight limit.

F. L. Kirschner, the well-known hardwood salesman, has joined the force of the W. P. Craig Lumber Company and will assist in handling its Pennsylvania and Ohio trade. The Craig company reports better shipments of hardwood than for a long time, one of the leaders in demand being spruce. Its salesmen are also getting a nice lot of orders for mixed hardwood for mine materials and for fine hardwood for the factory trade.

The Newell Brothers Lumber Company says that trade in mixed hardwoods is fine. Its orders have been good both in the East and in the Pittsburg district and it is keeping shipments going at a lively rate.

J. J. Linehan of the Linehan Lumber Company has been spending several weeks down East helping to line up the trade for spring. Both the Linehan brothers look for higher prices before long on all good grades of hardwood.

At the annual election of the Pittsburg Wholesale Lumber Dealers' Association March 14, the officers chosen for the ensuing year are: President, A. J. Diebold of the Forest Lumber Company; vice-president, William H. Schuette of William H. Schuette & Co.; secretary and treasurer, J. G. Criste of the Interior Lumber Company; directors, J. L. Kendall of the Kendall Lumber Company; J. A. Cheyne of the Pennsylvania Sash & Door Company; L. L. Satler of the L. L. Satler Lumber Company; Alex. Willson of the Willson Brothers Lumber Company, and Fred R. Babcock of the Babcock companies.

An indication of what Pittsburg wholesalers have to hope for in the way of big contracts this spring is found in the number and importance of the railroad and trolley projects which are announced for this district. The Pennsylvania company will spend several million dollars in building a four-track line from Youngstown, Ohio, to Warren, Ohio; improving its yards at New Castle; building spurs and double-tracking all along its line from Pittsburg to Youngstown. The Bessemer & Lake Erie Railroad Company is arranging for a big expenditure at Greenville, Pa., on its yards and shops. The Erie Railroad Company will carry out a similar plan of im-

provement at its shops at Kent, Ohio, and Meadville, Pa. The Pittsburg & Lake Erie Railroad Company is building an immense bridge across the Ohio river at Beaver, Pa., and is also adding tracks to nearly all its lines between Pittsburg and Youngstown, Ohio. The Baltimore & Ohio has arranged for extensive improvements in many parts of the Pittsburg district, and the Pennsylvania railroad will spend a large sum on its new yards at Sharpsburg, Pa., and on lines east of this city. Improvement in traction work is more noticeable every day. Two new lines were announced this week. The Fairmont & Pittsburg Railway Company, which has a capital of \$1,000,000, will build a line between Fairmont, W. Va., and this city. Another line has been financed by J. G. White & Co. of New York and will be built very soon between Sharon, Pa., and New Castle, Pa.

The twenty-five-story Oliver skyscraper at Smithfield street, Sixth and Oliver avenues is capturing a good number of first-class wholesale firms in this city, which are moving into their new offices this week. Among these are Willson Brothers Lumber Company of the Farmers' Bank building; L. L. Satler Lumber Company of the Bessemer building; Acorn Lumber Company of the Park building; McDonald Lumber Company of the Bessemer building; Breitwieser & Wilson Company, and the J. C. Donges Lumber Company of the Lewis block, and the Palmer-Semans Lumber Company of Uniontown, Pa., which is establishing its sales offices in a fine new suite in the Oliver building under the direction of that veteran hardwood man, I. F. Balsley, who for the past four years has handled the hardwood matters of the Willson Brothers Lumber Company.

## BOSTON

Herbert W. Blanchard of the Blanchard Lumber Company, Boston, has returned from a trip to Maine.

A dividend of eight per cent has been mailed the creditors of William H. Wood & Co. by William E. Litchfield, trustee. The firm made an assignment a year and a half ago. The liabilities were \$400,000 and the assets \$200,000. This dividend is a preliminary one prior to the allowance of other claims.

The Shepard & Morse Lumber Company has sent out circulars announcing its removal from the Mason building, Boston, to 226-233 Boston Safe Deposit & Trust Company building, 201 Devonshire street.

Wendell M. Weston of the W. M. Weston Company, hardwood dealers, returned the first of this week from a short business trip.

Frank B. Witherbee of the H. M. Bickford Company, Boston, sailed March 12 for a five weeks' European trip.

Imports of lumber from Europe have been larger. The Cunard steamer Ivernia brought in last week 500 tons of lumber, 100 logs and 140 tons of maple blocks.

At the recent election of officers of the Connecticut Valley Lumber Company, James J. Phelan of the firm of Hornblower & Weeks, bankers, was elected president to succeed the late George Van Dyke. He will make his headquarters in this city. George S. Lewis is treasurer and general manager.

Gates M. Poore died at his home in Lawrence, Mass., early in the month at the age of fifty-nine years. Until recently he was a member of the lumber firm of Bean & Poore. He was succeeded in business by his son, H. H. Poore.

The O. G. Poor Lumber Company of Swampscott, Mass., has recently been incorporated with a capital stock of \$20,000 in cash. Oscar G. Poor is president and Thomas M. Lyons, treasurer and clerk. Lucy M. Hutchins is one of the incorporators.

The Salem Manufacturing Company has been incorporated to conduct a wood-working business

in Salem, N. H. The company has taken a large factory building in Salem and is installing modern machinery. It is a Massachusetts corporation with a capital stock of \$40,000. The president is L. A. Pradoby.

A creditor's petition in bankruptcy has been filed against Miss Marion C. Treworgy, who formerly conducted a lumber business at 131 State street, Boston, by William H. Pierson of Water Hill, N. Y., one of her creditors. It is claimed that Miss Treworgy on January 6, 1910, gave a mortgage to J. H. Gerlack, one of the creditors, on property at 67 Mountfort street, for \$2,500, dated January 21, 1909, not acknowledged until January 6, 1910. It is claimed this was given with the intent of injuring her creditors. Other transfers of real estate were also made in the same way. The money raised, it is reported, was given her in the form of gold certificates, apparently for use in foreign countries. It is said that Miss Treworgy has fled to South America in the company of Walter Merchant, her fiance. The latter was arrested in her office early in January charged with using the mails in a scheme to defraud. He was defaulted in the U. S. circuit court in Brooklyn, N. Y., February 2. In the indictment he was charged with receiving money for shares in vessels he did not own.

E. F. Runnells, representing the firm of Chestnut & Slaght, dealers in pine and hardwoods, Buffalo, N. Y., was a visitor in the Boston market this week.

The possibility of the maximum tariff of the Payne-Aldrich tariff bill being applied to Canada has stirred the lumber dealers here to action. The executive committee of the Massachusetts Wholesale Lumber Dealers' Association held a meeting in Boston March 18 and after considerable discussion adopted resolutions to be presented to President Taft petitioning him to take steps to prevent the impending catastrophe which would take place in the event that a twenty-five per cent ad valorem addition to our tariff on imports from Canada is placed in operation. A committee, consisting of W. R. Chester and Thomas H. Shepard, left Boston March 22 for Washington to present the resolutions to President Taft.

## BALTIMORE

The quarterly meeting of the Baltimore Lumber Exchange and the monthly meeting of the managing committee were held on the afternoon and evening of March 14, the latter at the rooms of the Exchange and the former at the Merchants' Club. About the only business transacted was the adoption of a rule with regard to the grading of Virginia and North Carolina white cypress. The meeting of the Exchange was followed by an elaborate luncheon. Among those present were President John L. Alcock; James C. Rowe of the L. W. Rowe Lumber Company; Mr. Eppley of Orr, Eppley & Co.; Charles J. Gross of Charles M. Stieff, piano manufacturer; J. J. Kidd of the Kidd & Buckingham Lumber Company; James J. Lannon; William M. Borgan; John S. Helfrich; John J. Duffy of the Lafayette Mill & Lumber Company, and Edwin W. Knowles.

The Morgan Company, manufacturers of doors at Oshkosh, with an office in this city, has purchased from the Baltimore Sash & Door Company two warehouses, one located on West street, near Howard, and the other on the southeast side of Howard street, near West. The warehouses will be used in connection with the jobbing business acquired from the Baltimore company by the Morgan company, and also for the latter's own trade in this territory. The office of the Morgan company has been removed to West street, and the business of the western corporation as well as the jobbing trade bought from the Baltimore company will be concentrated there. The Baltimore company will confine itself entirely to manufacturing operations.

The Morgan company, which is represented here by C. A. Hianscom, has steadily expanded, and it was the intention of the officers to secure a warehouse in this city, where a full line of its products might be kept constantly on hand. The deal gives the company the desired facilities and enables it to command a greatly increased output.

E. M. Terry, secretary of the National Lumber Exporters' Association during the past four years, has resigned, and President Harvey M. Dickson has called a special meeting of the board of managers for March 22 to take action on the matter. Whether a successor will be elected at that time is not definitely known. L. Palmer, the assistant secretary at New Orleans, may be named to take charge of the work. Mr. Terry asked in his letter that the resignation take effect on April 1, but if matters cannot be satisfactorily arranged he is ready to continue another month. He will become assistant manager of the Manufacturers' Lumber Company, a newly organized combination of lumber manufacturers in the North and Canada, with headquarters at 27 William street, New York. Mr. Terry will devote his time to the export end of the business, with which he became familiar through years of experience in the office of Price & Hart. Mr. Terry's latest contribution to the work of the exporters' association was the compilation of a book which gives the port rules for all the ports with which exporters do business and supplying much valuable information.

The Maryland Lumber Company, a corporation organized to develop a timber tract in West Virginia, has been formed in Hagerstown, Md., with a capital stock of \$250,000, divided into shares of \$100 each. The incorporators are J. A. Denison, John G. Ernst, D. A. Stickell and Charles M. Danzer of Hagerstown, and D. S. McNitt of Lewiston, Pa. The officers are: J. A. Denison, president and manager; A. C. Strite, vice-president; Samuel Sowers, secretary; John G. Ernst, treasurer; D. A. Stickell, J. A. Denison, Charles M. Danzer, John G. Ernst and S. W. Sowers of Hagerstown; S. S. Stouffer of Sharpsburg, Md.; H. W. Shaffer of Burkittsville, Md., and D. S. McNitt of Lewiston, Pa., directors.

Rapid progress is being made by the Eisenhauer-MacLea Company in the reconstruction of its lumber sheds and office, which were destroyed by fire early in February. The damaged lumber has been sold to Otto Duker & Co., the ground cleared up, and this week work on two of the big sheds was well advanced, the foundation of a third being also ready to receive the superstructure. The two sheds, the framework of which is up, measure 50 by 170 and 50 by 90 feet and are 32 feet high. They, with those yet to be reared, will afford space for not less than 1,800,000 feet of hardwoods. A new office of brick will be built. The company is getting a full assortment on hand with surprising rapidity. Within the past month as many as ninety-five cars of lumber have been received, and the company is once more in tolerably fair shape to take care of orders.

Among the visiting lumbermen in Baltimore last week was Thomas Hughes, formerly of the Baltimore firm of Carter, Hughes & Co., but for about two years located at Troutdale, in southwestern Virginia. Here Mr. Hughes is looking after the operations of the three mills of the Iron Mountain Lumber Company, of which he is the head. He is giving close personal attention to the development of the timber tracts owned by the company. He states that the demand for stocks is on the increase, and all the mills are busy.

## CLEVELAND

Much interest is manifested in the local lumber field over the unsettled state of the Canadian tariff, which may be raised April first to

twenty-five per cent, in accord with the Paine-Aldrich law which provides that countries discriminating against the United States shall have a twenty-five per cent duty raised against them. Cleveland is one of the largest receiving ports for Canadian lumber. Lumbermen here say that it will mean a raise of from \$6 to \$10 a thousand feet on Canadian lumber if the duty is enforced. Considerable maple and other hardwoods are imported from the North and hardwood manufacturers would suffer with others. Cleveland lumbermen contemplated sending a delegation to Washington to protest against the enforcing of the new tariff until further negotiations are held with Canada, but were informed that their presence in Washington at this time would do no good. It was decided to coöperate with dealers at Saginaw and Tonawanda. It is probable that a big delegation will be sent in a short time to appeal to congress and President Taft to alter existing conditions.

Fire and marine insurance on lumber carriers was the topic discussed at a Chicago meeting from which W. H. Teare, prominent Cleveland lumberman, has just returned. He reports that rates this year will probably take a decided raise. Additional restrictions have also been placed on this class of vessel. Unless the Canadian lumber trade is blasted by the new tariff provisions it is expected that the boats operating out of Cleveland will have a very successful season. About sixty per cent of the lumber carriers here engage in the Canadian trade.

After being connected with the Advance Lumber Company for nearly fifteen years Harry P. Blake has severed his connection with that firm and accepted a position as city salesman for the new Putnam Lumber Company of this city.

The F. T. Peitch Company reports a renewed interest in all lines of hardwood with the opening of the building season. The company does an extensive business with concerns manufacturing interior finish. Building in Cleveland this year promises to excell all previous records.

The capital stock of the South Cleveland Lumber Company is to be increased from \$30,000 to \$50,000 to take care of the company's increasing business.

W. L. McManus, manufacturer of flooring at Petosky, Mich., and C. L. Shelburne of Green Bay, Va., called on the local trade this week.

The C. H. Foote Lumber Company, through its president, reports that the demand for the finer grades of hardwoods is better than for months and that a lively time is being spent in making deliveries and in disposing of inquiries.

## COLUMBUS

The records of the city building inspector show quite an increase in the number of building permits issued since the warm weather succeeded the winter. Lumber dealers, contractors and real estate men generally believe that the season of 1910 will be one of the most active in the history of the city as far as building operations are concerned and preparations are being made to start the work early. Lumber dealers anticipate quite a demand from that source, especially for hardwood flooring and other materials going to make an up-to-date dwelling or office building.

H. W. Collins, manager of sales of the central division of the W. M. Ritter Lumber Company, reports a steady run of orders from every section of the country and for all grades of hardwoods. Both the eastern and the western division, with headquarters at Philadelphia and Chicago respectively, report bright prospects for the future. The supply of stock is generally small and as a result a more active market is expected as the spring advances. Prices are strong and there is a tendency to advance in some lines. Mr. Collins believes that the market will improve from this time on. W. M. Ritter, head of the company, re-

turned March 19 from an extended trip among the mills of the company in several southern states. H. W. Collins of the same company left March 20 for a week's trip through Pittsburg, Erie and other Pennsylvania points. The regular meeting of the sales managers of the company was held at the Columbus office March 12, with F. B. Pryor of Chicago and R. L. Gilliam of Philadelphia present.

After some litigation a reorganization of the Capital City Casket Company of Columbus was effected under the new name of the Ohio Casket Company. It was incorporated with a capital stock of \$30,000 by J. A. Cheney, B. F. Whipps, C. M. Voorhees, W. S. Hatcher and C. M. Anderson. The plant of the company at 154 West Naghten street was taken over. J. A. Cheney is president; W. S. Hatcher, vice-president, and C. M. Anderson, secretary-treasurer.

O. F. Wollenweber, president of the Wollenweber Lumber Company of Marion, Ohio, formerly in the lumber trade in Columbus, was a visitor here recently. In speaking of Marion, he said the city was never more prosperous than at the present time.

The Findlay Carriage Company of Findlay, Ohio, has increased its capital stock from \$50,000 to \$150,000 to permit of the installation of an automobile department.

John R. Gobey, head of the John R. Gobey Lumber Company, reports an improvement in conditions in the lumber trade. Buyers who made contracts during the cold weather are now demanding immediate delivery. Mr. Gobey reports a bad car shortage in some sections in the South. He anticipates better conditions in the hardwood trade within a short time and is arranging to make a business trip to New Orleans and other southern points early in April.

W. L. Whitacre reports a tendency on the part of the hardwood trade to pick up. He says orders are coming in better and that inquiries are more numerous. Prices are strong.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company, reports conditions gradually improving in every part of the country covered by that concern. Orders are brisk and the improvement is most noticeable in the yard trade. There is a tendency to strengthen quotations in certain varieties, he says. W. M. Boyer of the company recently returned from a business trip in southern Ohio.

J. E. Cummins, general manager of the Columbus Saw Mill Company, which has a hardwood mill on Dublin avenue, reports a steady improvement in the demand for hardwoods, especially oaks and walnut. The concern does quite an export business in walnut to Hamburg, Germany, where reports show a great improvement.

J. J. Sexton, head of the Osborne & Sexton Company, reports a better outlook for the spring and summer. He returned recently from a trip to Cincinnati, Detroit and other Michigan cities.

H. D. Brasher of the H. D. Brasher Lumber Company reports a better run of orders since the cold weather has passed and he believes the improvement will continue as the season advances.

A. C. Davis of the A. C. Davis Lumber Company reports a fair amount of business when the weather conditions are taken into consideration. He says the demand for oak is improving and the supply seems to be short. Popular is also in good demand. George B. Jobson, secretary of the company, recently returned from an extended trip through Chicago, Milwaukee and other cities in the Northwest.

The General Lumber Company will soon begin operations at its mill at Ashland, Ky. H. W. Putnam, president of the concern, reports a nice run of orders with bright prospects for the future. The orders coming in from manufacturing establishments are now growing larger. H. C. Buskirk, sales manager of the company, recently returned from the timber tract on the Big Sandy river in Kentucky. He reports con-

siderable progress in floating logs down to the mill.

The Highland Lumber Company of Ironton, Ohio, was incorporated recently with an authorized capital of \$30,000 by J. J. Lyon and others.

H. S. Hager has purchased from Jefferson Lowry and E. Foster a tract of 420 acres of timber land near Coshocton, Ohio, which will be developed at once. A mill will be erected. A large part of the timber is white oak.

The W. H. Dawkins Lumber Company of Ironton, Ohio, has closed a deal for a tract of 8,200 acres of timber land in Pike county, which will be sawed at the mill at Ironton.

H. C. Bard of the Middle States Lumber Company reports a slight improvement in orders. He believes that prices will increase soon.

M. A. Hayward & Son report a better demand for oak flooring as the building season approaches.

Owing to a delay in calling a meeting of the committee on constitution, the proposed association of Columbus wholesalers has not yet been perfected. The committee, of which John R. Gobey is chairman, will be called together soon and the constitution and by-laws drafted. There is no opposition to the proposed organization and it is expected that it will be launched in a few weeks.

### CINCINNATI

Secretary Lewis Doster left last Monday for a trip to New York and the East, where he will remain for a week or ten days. The past week at headquarters of the Hardwood Manufacturers' Association was quiet so far as visitors were concerned, not one out-of-town lumberman registering. The new grading rules will be ready to put in the mails about the end of the week. The pamphlet is a neat pocket compendium of convenient size.

Someone blundered in sending out notices for the convention of the Slack Cooperage Association, and as a consequence several people arrived on St. Patrick's day, March 17, looking for the convention at the Sinton hotel. Inquiry developed that the date set was May 17-18, instead of March 17-18, as stated in the notices.

Fred H. Duling of the Graham Lumber Company, who has been touring Ohio, Indiana and Kentucky for the past two weeks, writes from Kentucky that his trip has been very successful and that he will not return for a week or more. J. Watt Graham, president of the company, says that business conditions with the concern have been satisfactory, while the outlook remains good.

President Cliff S. Walker of the Lumbermen's Club of Cincinnati on Monday started to move into his new and handsome residence on Garrard street, Covington, Ky. The new home is a model of modern architecture and embraces every up-to-date convenience and appliance as to heating, lighting and electric appliances. A housewarming by the members of the Lumbermen's Club of Cincinnati will be a pleasant feature of the near future.

William E. DeLaney of the Kentucky Lumber Company will leave early next week for a trip to Mississippi to look over a timber proposition for his company. While in the South it is probable that his trip will be extended to Louisiana, where large hardwood tracts are being opened up. Ralph McCracken, secretary of the company, left Monday for a short visit to the mills of the company at Burnside and Williamsburg, Ky. Both mills are in operation, but the supply of logs is limited, and unless heavy rains in the immediate future bring a log tide in the Kentucky river, the mills will be compelled to close down for want of logs in a few weeks.

J. A. Hilliard of the Louisiana Red Cypress Company of New Orleans is spending a few days in this city looking after his business interests at this point.

Automobiles have become an absolute necessity in the lives of Cincinnati lumbermen, and nearly everybody possesses a gasoline wagon. Dwight Hinckley, who has been set down as noted lover of the horse, has fallen from grace and is now the possessor of a big machine of the Mitchell brand. Lewis Doster will dispose of his big machine and purchase a high-powered runabout in which to get over the ground at a more rapid rate.

M. L. Short, the star of the Lumbermen's Ball Club, who had the misfortune last summer to break a leg while endeavoring to annex a base, has fully recovered and is now ready to try and break the other one. He is known to the trade by his connection with the Dwight Hinckley Lumber Company as local sales manager. He has purchased a Hupmobile to facilitate business operations.

Ben Dulweber still drives his big red wagon, and when in the city can be seen tearing off the miles as fast as the speed limit allows.

Charley Hail, Charles Shiels and Harry Freiberg, all prominent lumber operators on the west side, possess machines with which to facilitate business and reach their homes rapidly after business hours. To name all the possessors of gas buggies would look like a roster of the lumber trade.

With clear skies there is much activity displayed in the outside work at the numerous lumber yards and mills in the outskirts of the city. On every side this activity is apparent. The receipts of lumber by rail, which were heavily delayed by the weather conditions, are now unhampered, and, as a consequence, there is more spirit displayed around the yards in receiving and shipping lumber.

The Asher Lumber Company has just completed a cosy yard office at its plant on the Southern railroad and Bank street, where extensive sidings and switches have been added and large stocks of hardwoods are being received and piled up in the yard. The company will abandon its present office at Bank and Western avenue, and on April 1 will open a suite of offices in the Provident Bank building at Seventh and Vine streets. I. M. Asher is making a tour of the cities in the East and will return in the course of a week or ten days to be on hand and assist in moving day. Business is very fair and has been since the opening of the year, with a good outlook for the future, says John D. Serena, the office manager.

S. Menzies, the Cincinnati representative of James Kennedy & Co. (Ltd.) of Glasgow, Scotland, said that business conditions were very unsatisfactory, though there was some encouragement in the fact that there was always something doing. Business on the other side continued rather dull and prices were hindered by the large stocks of lumber still piled up over there.

R. C. Witbeck of the Ferd Brenner Lumber Company returned a week ago from the mill at Alexandria, La., where he had been for seven weeks, attending to business and getting close to nature. He said he enjoyed his stay, but had not been back sufficiently long to say as to conditions at the home office, which, while he considered from a superficial survey to be fair, there was much room for improvement. He said that Vice-President Vest, who is also manager of the Alexandria plant, was doing well and would remain at the plant for many months to come, as there was sufficient business there to engross all of his time.

Ferd Brenner of the Ferd Brenner Lumber Company received information within the past fortnight which put at rest all uneasiness as to the whereabouts of Leland G. Banning, who for several years has been a globe trotter. The latest advices were that Mr. Banning was touring in Egypt around Christmas, and then for a long time no information was received.

The advice received by Mr. Brenner was to the effect that Mr. Banning had been sick at a hotel in Colombo, Ceylon, for two months, but that he was now recovering and preparing to start on his homeward trip, where he is expected to arrive about May 1. Mr. Brenner parted company in Europe last June with Mr. Banning and returned to Cincinnati, and Mr. Banning, accompanied by a party of friends, commenced a trip through Europe, Egypt and into India.

Ferd Brenner says that the export trade shows some indications of improvement, but that the foreign trade was not at all active. There is always some business doing, however, and there is hopes that before long there will be an awakening. He says there is evidently a good field for American furniture in South America, and his advices from that country lead him to believe that American furniture manufacturers would find it a profitable field. He said he believed in exploiting the furniture industry and encouraging those engaged in it to branch out into the foreign markets, and the result would be more buying of hardwood lumber.

On January 6 Miss Emma M. Kipp, sister of B. A. Kipp, head of B. A. Kipp & Co., journeyed to San Antonio, Tex., in search of relief from consumption. On Saturday, March 12, a dispatch was received by her relatives apprising them of her death at 5:30 a. m. The body was brought to Cincinnati and the funeral services were held at 8:30 a. m. Wednesday, March 16, from St. Augustine's Catholic church, with which she had been a life-long communicant. Miss Kipp made friends with all with whom she came in contact. She was well known to the lumber trade of Cincinnati through employment and in connection with her brother. She was in charge of the lumber pavilion in the last Cincinnati Fall Festival, and to her untiring efforts the success of the display of the Lumbermen's Club of Cincinnati was due.

Sales Manager W. A. Dolph of the J. M. Card Lumber Company of Chattanooga, Tenn., was in the city last week looking over the market conditions and visiting correspondents.

Fred Conn of the Bayou Land & Lumber Company spent a few days in Cincinnati last week. He was accompanied by G. P. Heddon of Heddon & Clark of New York City, who remained over a few days before departing for the East. Fred Conn had been in Natchez, Miss., and that vicinity for four months, and on his way up stopped over in Memphis, Tenn. He said he expected to return to the South by the week's end, but business conditions have caused him to remain over, and he is still here. He is a firm believer in the future of red gum, and is actively engaged in demonstrating his confidence in red gum by making it a study and exploiting its many admirable qualities. His father, Sam Conn, is now at Natchez, Miss., where he is busy looking after the timber interests of the Bayou Land & Lumber Company. They are operating a mill plant at Itabena, Miss., where they manufacture gum, cypress and oak.

The project to erect a new Central Union station in Cincinnati has taken definite shape. The promoter, Mr. Bleckman of New York, has worked out a plan which is acceptable to all the railroads entering the city. The new station, which will accommodate all the suburban traction lines entering the city, as well as all the steam railroads, will be located on the south side of Third street, from Main to Central avenue. It will be built of concrete and have large office quarters. The depot company will be financed by eastern capitalists, and the cost of the station and the necessary approaches is estimated at \$25,000,000. Archibald S. White, at the head of the financing company, says the money will be ready just as soon as definite working plans are completed. Options on the property necessary have already been secured.

Great excitement is being aroused over the

coming election of officers of the Lumbermen's Club of Cincinnati. The constitution provides that the president shall appoint a committee of three to name the regular ticket, and that a like committee shall be nominated from the floor to arrange an independent ticket two months before the date of the annual election, which happens this year on the first Monday in May, these committees to report at least one month prior to the annual election. The committees have already named their candidates, and the campaign is now in full swing. The regular ticket is headed by G. C. Ault for president; Dwight Hinckley, first vice-president; W. E. Talbert, second vice-president; treasurer, George Morgan; secretary, Joseph Bolser. Independent ticket—President, W. E. DeLaney; first vice-president, James Buckley; second vice-president, Ferd Brenner; treasurer, Charles F. Shiels; secretary, Joseph Bolser. There are seven weeks in which to do campaign work and every moment will be utilized in buttonholing the poor, innocent voters. It is a positive fact that the only one named that is certain of election is Joseph Bolser, the handsome and smiling chairman of the Entertainment Committee. It will be hard to find a successor to Joe as chairman of the Entertainment Committee, of which he is the acknowledged premier.

### TOLEDO

The Acme Lumber Company of Toledo has gone into the hands of a receiver. Robert C. Bowlus was appointed by the court upon his own application to take charge of the business. He alleges that the concern has debts of about \$40,000 and that in addition to its property in east Toledo, it has holdings in Clayton, Mich., and in Pike county; that its bank account is overdrawn, its employees have been discharged and that it has reached the limit of its credit. The charge is also made that there has been no meeting of the stockholders and directors since its incorporation in 1906. The receiver has taken charge and entered upon the task of closing out the affairs of the concern. Bond of \$5,000 was furnished by the receiver.

The Toledo Bending Company reports a fair volume of business. The concern manufactures wood stock for carriage and wagon works. The growth of the automobile business has cut into its trade somewhat, but repair work has to some extent overcome the handicap in other lines.

Considerable interest has attached to the recent action of the city of Toledo in its effort to extend Avondale avenue. After legislation had been passed for the condemnation of the necessary property it was discovered that the sixty-foot street provided for takes in six feet of the sawmill and hardwood lumber yard operated by DeWitt C. Courtney and that the city would be compelled to buy the entire plant at a cost of about \$12,000. The street will be reduced to fifty feet wide, and it is thought that the change in width will prevent further difficulty.

Frank Spangler has returned from a five weeks' business and pleasure trip to southern points, including Memphis, where his concern has extensive lumber interests. He said: "Speaking generally there has never been a time when business prospects were better than now. We are at present paying special attention to cypress and bay poplar. There is a heavy substitution of bay poplar in place of yellow pine. It is selling from \$5 to \$10 a thousand cheaper than yellow pine and has proven satisfactory material. Cypress is in splendid demand not only for building purposes but from greenhouse concerns and tank and cistern manufacturers. We are also finding a nice trade in oak, gum and other hardwoods."

The Nugent Furniture Company has been incorporated at Toledo with a capital stock of \$10,000 by Michael E. Nugent, William C.

Gruber, Edmund R. Nugent and Rose V. Hill. It will take over the furniture business of Draper & Nugent, Clarence A. Draper retiring from the business. At the same time these people incorporated the Toledo Show Case Company, with a capital of \$5,000. The latter concern will engage in the manufacture of all kinds of show cases, taking over the plant on Lafayette street, which was started by the late L. S. Baumgardner about forty years ago.

W. S. Booth of the Booth Column Company returned recently from a business trip to eastern points, with an exceptionally nice line of orders. Business is reported splendid at the Booth plant, with the full force of thirty-two men busy, and the plant operating at capacity. Mr. Booth said: "The higher grades of lumber have advanced and are growing more scarce, but we have had no difficulty in securing supplies thus far. We have gradually been shifting from poplar to cypress, as we find that cypress runs to clear, while No. 1 poplar is quite coarse. We are at present installing a new automatic band saw sharpener."

Thomas C. Rowland, president of the Mitchell & Rowland Lumber Company, recently died at his home in Toledo. He was a pioneer in the lumber business, having been engaged in this line in this city since 1867. The body was taken to Cincinnati for interment in Spring Grove cemetery. He was one of the most prominent men in the commercial life of the city. He is survived by his wife, one son and a daughter.

Manager Roberts of the Big Four Hardwood Company reports a splendid demand for hardwood materials. His firm has found a pressing call for high-grade poplar, a live demand for plain oak and a healthy movement of nearly all kinds of hardwoods. Furniture manufacturers and planing mills have proven especially good customers.

### INDIANAPOLIS

C. D. M. Houghton and E. H. Greer of the Greer-Houghton Lumber Company have returned from a trip through Arkansas, Louisiana and Florida.

Ransom Griffin of the Central Coal & Coke Company, and W. F. Johnson of the Capitol Lumber Company, were in Alabama recently.

The Indianapolis Commercial Club has named C. C. Foster of the Foster Lumber Company and A. A. Wilkinson of the Greer-Wilkinson Lumber Company as members of its elevated track commission.

The warehouse of J. N. Halstead and planing mill of C. W. Reed were burned at Brazil on March 7, the loss being \$12,800, which was partially covered by insurance.

More than one hundred manufacturing, wholesale and jobbing concerns are interested in the Indianapolis Trade Association which has just been organized for the purpose of extending trade and obtaining better freight rates and shipping facilities. Among the charter members are the Adams-Carr Company, Burnet-Lewis Lumber Company, Maas-Neimeyer Lumber Company and E. C. Atkins & Co.

### EVANSVILLE

On the morning of March 12 the large double band mill of Maley & Wertz in this city was destroyed by fire, the origin of which is attributed to a hot box near one of the large saws. The mill was a total loss and is estimated at \$30,000, with about \$16,000 insurance. It is not definitely known whether the plant will be rebuilt. The company has other mills in this state, one at Vincennes and one at Grammer, Ind., where it is taking care of its stock of logs. Maley & Wertz have been operating the plant here for about nine years, having purchased it of Thompson & Bonnell.

Bedna Young of Young & Cutsinger returned the latter part of last week from a trip to the South.

Among recent visitors to this market were Otto Hill of S. P. Coppock & Co., Fort Wayne; George M. Hoban, with George J. Kennedy, No. 1 Madison avenue, New York; George I. Hull of the Webster Lumber Company, Swanton, Vt.; Mr. Palmer of the Palmer-Hunter Lumber Company, Boston, Mass.; Mr. Dewitt of the Dewitt Lumber Company, New York; Mr. Boswell of the Domestic Lumber Company, Columbus, O., and Mr. Fletcher of the East St. Louis Walnut Company, East St. Louis, Ill.

The manufacturing plant of the Hickman-Ebbert Company, defunct wagon manufacturers of Owensboro, Ky., was recently sold at public auction by O. H. Haynes. J. W. McCulloch, president of the Green River Distilling Company, bought the property for \$174,000. The company was capitalized at \$300,000. Mr. McCulloch gave out no information as to what his plans were, but it is probable that the plant will be resold to capitalists.

James Rush, formerly of Evansville, was here last week attending to some business matters. From here he went to Memphis, where he will go into business with Messrs. Moffett and Bowman of the Moffett-Bowman Lumber Company of Madison, Ind. This concern is now removing its mill to Memphis.

Prospects are bright for the location in this city of the Pullman Automobile Company of York, Pa., and the Vulcan Steam Shovel Company of Toledo, O. A large tract of land has been platted into lots and sold, the proceeds of which are used to bring factories here. It is certain that one and probably both of these factories will be located here, as the lots are nearly all sold and the money necessary to bring them here raised.

## MEMPHIS

J. W. Thompson of the J. W. Thompson Lumber Company has purchased the interest of George M. Brasfield in the Brasfield-Thompson Lumber Company. Mr. Thompson was vice-president and Mr. Brasfield president of the company. Plans are now under way for the dissolution of the old corporation and for the absorption of its stock by the J. W. Thompson Lumber Company. By this transaction the Thompson company comes into possession of a big band mill at Biscoe, Ark., and also of a large body of timber. It is probable that there is more gum than anything else on this land, but there is also a great deal of oak. Some improvements are being made at the mill and Mr. Thompson is authority for the statement that it will be placed in operation within the next fortnight. As previously stated, E. M. Shulte, who was manager of the operations of the J. W. Thompson Lumber Company at Berclair, Miss., prior to the recent sale of that plant, will be in charge at Biscoe.

The East End Hardwood Lumber Company, which some months ago purchased the mill of the Tyronza Milling Company, Tyronza, Ark., with a view to removing it to Memphis, has completed its arrangements here and the plant is now in operation. It began only this week and has a capacity of about 30,000 feet. The mill is a band one and a specialty will be made of high-grade stock. Operations began with a good supply of timber on hand. J. R. Bailey, N. A. Hurst and R. N. Bailey are the principal stockholders.

J. E. Munal & Son, South Memphis, have begun operations at their mill, which has a capacity of 25,000 feet. The plant was built by Munal & Son, but will cut for May Brothers.

Another plant which began operations recently is that of Gibson & Whittaker in South Memphis. It will cut about 30,000 to 40,000 feet of lumber per day. This firm has heretofore operated only

a resaw, but decided last fall to put in a hardwood mill, and has been busily engaged thereon for some time. Mr. Whittaker was formerly associated with the Bennett Hardwood Lumber Company and Mr. Gibson is well known to a large portion of the trade through his affiliation with the inspection bureau of the National Hardwood Lumber Association.

The Nickey Brothers Hardwood Lumber Company is making rapid progress on its plant in the northeastern part of the city. The necessary buildings have already been erected and the machinery will be installed as rapidly as possible. This will be one of the largest of the new mills in Memphis.

The Bennett Hardwood Lumber Company has resumed operations recently after an extended shutdown. The company, which has its mill in North Memphis, is well supplied with timber and proposes to operate steadily.

W. R. Barksdale of the Barksdale-Kellogg Lumber Company has placed his mill at Galen, Miss., in operation. He has between 300,000 and 400,000 feet of lumber to cut at that point, and, when this is sawn, he will remove the mill to another point. The other two mills of the firm at Cyclone and Inverness are in operation and are running on full time. Mr. Barksdale states that the demand for lumber is splendid, that he has less dry stock than he has had for a long while.

Announcement is made here that the National Box Manufacturers' Association will hold its midwinter convention in Memphis in 1911. Charles R. Brower, who recently attended the annual convention of this body, succeeded in landing the convention for Memphis. Mr. Brower went as the delegate from the Business Men's Club of Memphis. It is expected that at least 1,500 delegates will be present and much importance attaches to the fact that efforts will be made, while the convention is in session here, to have the organization adopt Memphis as its permanent headquarters. There are several prominent members of the association here and Memphis takes exceptionally high rank as a maker of boxes and box shooks out of cottonwood and gum, which abound in this section. Several of the large firms here which have headquarters in this city also operate box factories at points in the Memphis territory.

The Mississippi river has passed the danger line of thirty-three feet and it is officially forecasted that it will reach a stage of thirty-five feet. The levees, however, have been built with a view to withstanding a stage of forty feet, and lumber interests and others who have holdings on either side of the levees are giving themselves no uneasiness over the situation.

The Garland Land & Timber Company, Hot Springs, Ark., has filed an amendment to its charter whereby its capital stock is increased from \$50,000 to \$100,000. C. N. Rix is president of the company.

Plans are under way for the construction of a plant here for the manufacture of doors of all kinds. W. C. Wing of Wisconsin and H. B. Aden of Memphis are among the promoters. The firm owns a considerable amount of timber land in Mississippi, and Memphis has been selected because of its convenient location with respect to these holdings.

The building for the big box factory at Hope, Ark., has been completed and the greater part of the machinery placed. It is expected that the plant will be ready for operation by April 1.

Plans are under way for the extension of the Louisiana & Pine Bluff railroad to a connection with the Rock Island System at Champagnolle. The extension will be twenty-two miles in length and will run from Huttig via Dollar Junction to the point indicated. The road has already been graded for a distance of five miles north of Dollar Junction. A large amount of virgin timber is located in Union county and the building of the road will furnish facilities for its development. The Wisconsin Lumber Company of

Chicago is at present building a big band mill at Huttig, one of the terminals of the road, with a capacity of 50,000 feet per day. This will be in readiness for operation some time this summer.

The Perkins Land & Lumber Company has filed a copy of its certificate of incorporation with the Arkansas authorities as a preliminary step to the building of a mill near Helena, Ark., for the development of its timber land holdings in that state. The company is incorporated under the laws of Tennessee with a capital stock of \$25,000 and has its headquarters at Memphis. It is closely identified with the hardwood firm of George C. Brown & Co., L. E. Brown being president of both.

Several prominent capitalists of Memphis, together with business men of Mississippi, as well as Paris and London, have made application for a charter for the Memphis, Pensacola & Gulf Railroad Company, for the purpose of building a railroad from a point on the Illinois Central railroad, south of Memphis, through Meridian and Plumb Point to Pensacola, a distance of 385 miles. Among the incorporators are: J. M. Dockery of Dockery & Donelson; Will Dockery of Dockery, Miss.; George Neuhardt of the Chickasaw Bank & Trust Company; H. T. Bruce, Dr. B. G. Henning, M. J. Roach, J. H. Scaife, D. S. Rice and S. Walter Jones. The promoters say that a route has already been mapped out and that financial arrangements have practically been completed. One of the incorporators states that grading ought to begin with the next three or four months, and it is further stated that extensive terminals will be built at Pensacola. The same authority denies that there is any other system back of the new road. There have been a number of charters issued covering practically the same route, but nothing has ever been done by any of the incorporators, the charters expiring because of inactivity on the part of those who proposed to build the authorized road. Lumbermen would not be averse to seeing a new line of railway to tide water at Pensacola, but they will wait some time before commending themselves as to the present outlook.

W. H. Russe of Russe & Burgess, Inc., has just returned from Naples, Tex., where he went on business for his firm.

F. P. Southgate, chief inspector of the National Hardwood Lumber Association, spent some days in Memphis recently.

E. Dalton has purchased the plant of the Pocahontas Bending Company, near Pocahontas, Ark., for \$24,000. In addition to the plant, a considerable body of timber land was involved in the purchase.

## NASHVILLE

The Tennessee Hardwood Lumber Company has been incorporated with \$50,000 capital by T. B. Johnson, George W. Killebrew, Johnson Bransford, A. H. Robinson and Robert Lusk to operate in this city. All these men are well-known local capitalists.

A new firm in Nashville that is going after business hard, and getting it, is the Nashville Floor-Laying Company, the officers of which are: Richard T. Wilson, president; L. J. Verchota, secretary, and R. E. Bigger, general manager. The company has offices in the Arcade and is doing floor laying in and out of the city and in addition is retailing all kinds of finishing material. Richard T. Wilson, the president, is a son-in-law of the late John B. Ransom, the Nashville lumber king.

The sawmill of W. A. Sharp & Son of Lewisburg, Tenn., has been destroyed by fire. Loss, \$950; no insurance.

Charles Williamson Sr., a prominent farmer living near Culleoka, in Maury county, recently sold sixty-five giant poplar trees for \$70 each, standing.

Hamilton Love of the well-known firm of Love, Boyd & Co. has just completed a new

hardwood code, containing less than a thousand words and in pocket edition. All superfluous matter and cumbersome tables have been cut out. The principle of the code consists in adding suffixes to words to denote different grades of lumber.

### BRISTOL

Lee McChesney will leave this week for Elk Valley, near Knoxville, where he will begin the work of installing a band mill. Mr. McChesney stated this week to the *HARDWOOD RECORD* correspondent, that he had a seven or eight years' out of the timber at Elk Valley and would get his mill started just as quick as possible.

The Peter-McCain Lumber Company reports a steady increase in business, with a good outlook for trade the remainder of the year.

J. W. Henniger was here last week making arrangements to install mills to develop the timber tract in Carter county, Tenn., which he recently purchased at a cost of \$40,000 from C. C. English of this city. He will begin manufacturing the timber at once.

As a result of the interest in good roads taken by Lee McChesney, a Bristol delegate to the last general assembly of Virginia, just adjourned, Washington county will at once spend \$200,000 for grading and macadamizing principal road arteries.

The mortgage deed of the Whiting Manufacturing Company to the Knickerbocker Trust Company of New York, conveying in trust a large amount of timber land to secure a \$2,000,000 loan negotiated in London recently by Frank R. Whiting, is being recorded in this section. The company will materially extend its operations with the new capital. It already has two band mills and several other large operations.

The Came-Wyman Lumber Company is installing a new engine and making other improvements at its band mill in this city and will resume operations in about two weeks. It has a good log supply. The large woodworking plant of the Bristol Door & Lumber Company, which has been operated in conjunction with the band mill, is running again after a shutdown of only two weeks. H. P. Wyman of the company, accompanied by his wife, has gone on a six weeks' tour of the West, during which time he will visit Chicago, Los Angeles and Denver.

W. H. Bolling, a well-known manufacturer of Galax, Va., was a recent visitor in Bristol.

J. A. Wilkinson is back from Roanoke, where he attended the meeting of the American Wagon Oak Plank Association of which he is vice-president and one of the leading spirits. He says that with certain modifications, the association will accept the inspection rules recommended by the Timber Trades Association of Liverpool. H. M. Hoskins of the H. M. Hoskins Lumber Company was also among the Bristol lumbermen who attended the meeting.

A recent prominent lumberman on the Bristol market was Morris J. Dukes of the R. A. & J. J. Williams Company of Philadelphia. He spent several days at his company's Bristol office.

The Bristol lumbermen report little change in hardwood trade conditions. More inquiries are reported and further than that the outlook is good and that the volume of business now being done is satisfactory, little is given out. Shipments are holding up well, while the railroads have about all of the traffic they can handle.

### LOUISVILLE

Members of the Louisville Hardwood Club are getting down to business in connection with the annual convention of the National Hardwood Lumber Association, which will be held here in June. Definite arrangements for the use of the Seelbach Hotel on that occasion have been completed, and the lumbermen will have full sway in the magnificent hostelry, the finest in the

South. The entertainment features will be arranged with reference to the business sessions, and while Kentucky hospitality will be in evidence, it will not interfere with the regular sessions of the convention. From word received by the local club from lumbermen all over the country the convention here will be one of the largest ever held by a lumber association.

Business was reported by the W. P. Brown & Sons Lumber Company to be very good, the demand having developed in all lines, and all grades moving freely. A lot of stock is being received from the mills, which are now running, the hard winter having delayed the beginning of operations beyond the usual period. The new yard of the company has not been used as yet on account of the fact that a big sewer is being built through it. The company's new mill located at Madisonville has been put in operation and is cutting a big run of oak and poplar. It is in a fine timber country and will add considerably to the company's output of lumber.

H. A. McCowen of the Ohio River Saw Mill Company was in town last week. He made one of his periodical visits from North Vernon, Ind. R. F. Smith, local manager of the company, said that cars are now much easier to get than formerly, a decided shortage having been visible last month. Business with the company is good.

M. di Benedetto, manager of the British Honduras and Yucatan branch of the C. C. Meagel & Brother Company, left last Sunday for Belize, after a stay of two weeks in Louisville, during which he conferred relative to mahogany operations for the Mengel company. M. di Benedetto said that the company is now cutting 4,000,000 feet a year in Mexico, and yet seems to have only scratched the surface of the supply. It is operating twenty-one miles of railroad there. All of the equipment for this is up to date, including two Shea locomotives, one twenty-ton Hoister and a big American loader. The logs are hauled from the camps to the railroad by cattle and then handled by machinery and rail to the coast. A good deal of satisfactory labor has been secured for the lumber operations from the Bahama Islands. In regard to labor conditions, M. di Benedetto said it is expected that the British Honduras government will shortly put into effect a new labor law, making conditions more favorable for the employer. M. di Benedetto has been in the mahogany business for fourteen years and is an expert on conditions in Central America.

D. C. Harris, traffic manager for the Mengel company, has returned from a business trip. Clarence R. Mengel, president, has invested in a handsome new Maxwell, a red beauty, which he is driving with a good deal of pleasure. The Venus, loaded with 900,000 feet of African mahogany, is due at Pensacola this week. She hauls from Axim, and the cargo is expected to be unusually fine.

A. E. Norman of the Norman Lumber Company is pretty busy these days getting out orders. He is also planning for the removal of his yards to his new Magnolia street site, but said that this will not be done until a railroad switch has been run into the yard. The demand is good with his company.

Claude Sears of the Edward L. Davis Lumber Company is in the East developing some good business. The Rockbridge mill of the company, near Glasgow, Ky., is now in operation, bad weather having prevented it from being started earlier. It will be run right along now, because it is felt that the demand will be good. Orders for all items on the stock list are coming in in large volume now.

The Hardwood Club was much interested in the Traffic and Transportation Club, which recently elected officers, naming J. B. Ford of the Southern railway president. Mr. Ford said in his annual address that the object of the organization was to secure co-operation between roads and shippers and to promote a feeling of friendliness which would enable them to meet

on a common basis and work out problems of mutual concern. John H. Marble, special attorney of the Interstate Commerce Commission, spoke before the club last week, and in his address said that reasonable rates are beneficial not only to the shipper but also to the railroads, since they encourage and develop traffic. On the other hand, he added, rates which are too low cause the service to depreciate and thus hurt the shipping interests.

The Hardwood Club, which first proposed the average demurrage system, is well pleased at the action of the Kentucky State Railroad Commission, which has put the system into effect. The Pennsylvania road adopted it March 1, and it will become effective with reference to the others April 1. As the regulations were approved by the National Association of Railroad Commissioners, the average rules will practically be universal in operation. The credit system is provided, whereby time saved in unloading or loading a car is credited on cars which require a greater time than the maximum of forty-eight hours. The Transportation Committee of the club proposed this system to the association several months ago prior to its annual convention in Washington.

Agreement has been reached by the creditors of the Kentucky River Poplar Company, which has been in the hands of G. A. Roy, receiver appointed by the federal court, whereby they will accept fifty cents on the dollar in settlement of their claims. It is expected that this will be approved by the federal court, and meanwhile Receiver Roy will continue to operate the company. It has mills at Irvine and Valley View. Its liabilities amount to \$118,000.

J. W. McCulloch purchased the plant of the Hlickman-Ebbert Wagon Company at Owensboro for \$174,000 at a public sale decided on by the stockholders. His was the only bid received. The company was capitalized for \$300,000.

The Transportation Committee of the Board of Trade has taken a stand against the proposed Commission Court to relieve the Interstate Commerce Commission of the labor involved in enforcing its orders. The committee believes that only the railroads would be aided by such a court.

The receiver of the Southern Mutual Investment & American Reserve Bond Company of Lexington, has sold 40,000 acres of timber lands in Missouri, represented by securities of the Austin Land & Lumber Company, to the Federal Trust Company of St. Louis for \$65,000.

W. R. Thomas, president and manager of the Ford Lumber & Manufacturing Company of Winchester, died recently at the age of fifty-one years. The company is associated with the Louisville Point Lumber Company.

Charles D. Edwards, a well known lumberman of Elkton, Ky., died recently after a short illness. He was thirty years old.

A rather odd lumber case has been disposed of in the circuit court. R. M. Cunningham bought a lumber order from the Marbury-Lukker Company of Marbury, Miss. The order was filled by the company on a different basis than that expected, and more lumber than ordered came in. Mr. Cunningham turned over the surplus to the Bullock Lumber Company as balce. Some of it became lost in some way and the Marbury company sued to recover. The court approved the suit and ordered the Bullock company to make good. The amount involved was \$1,000.

It is believed, from advices received from Washington, that an increase in the appropriation for the benefit of work on the Kentucky river will be made so that the total available will be \$206,000. Efforts are also being made to provide for the construction of dam No. 40 on the Ohio river at Madison, which would help the Kentucky river navigation.

Work is being rapidly pushed on the Wasoto & Black Mountain railroad in the Cumberland mountains, which will be seventy miles long and

will be operated by the Louisville & Nashville. Construction forces aggregating 1,000 men are at work. The construction of the road has resulted in timber lands in that region advancing in value, increases announced being from \$2 to \$10 an acre. It is likely that the road will be completed by September 1. Announcement is made that the Chicago, Memphis & Gulf railroad will be extended from Tiptonville, Tenn., to Hickman, Ky., opening up considerable timber areas. The extension of the Kentucky Highlands railroad from Millville to Versailles by the Louisville & Nashville will give an outlet for the Louisville & Atlantic, and will enable lumber from eastern Kentucky to be through routed to this market.

### ASHLAND

The W. H. Dawkins Lumber Company received a fairly good run of timber on the last tide. In an interview with Mr. Dawkins, he states that his company has secured a tract of timber on Beaver Creek in Big Sandy, and has begun operations on same. It is considered one of the finest boundaries of timber in this section, many of the trees measuring seven feet in diameter at the base. There is a great deal more difficulty encountered in getting out timber now than in former years, for the most desirable growth is now so far removed from the main waterways that in a great many cases logs must be hauled long distances over the mountains, a tramroad having to be built, and a stationary engine maintained on the mountain with which to haul to the creek, where splash dams are constructed to splash the logs out into the main creek, an expensive method but modern logging. This company reports business satisfactory.

Vansant, Kitchen & Co.'s mill is in operation with enough timber for a good run. They report an active demand for high-grade stock. D. J. Taft of this concern has returned from an extended stay in Florida.

The Wright-Saulsberry Company says business is satisfactory. Prices are good, with a big demand for car stock and railroad timbers. The company's boat from Parkersburg dropped into its harbor a few days ago a fine lot of logs. Mr. Wright says some of the poplar is the best the company has had for years. The mill is now running on a twelve-hour run, with prospects for a steady run throughout the year. Charles J. Kitchen recently spent several days at Parkersburg, W. Va., looking after timber.

T. N. Fannin of the Keys-Fannin Company is home from a trip to his interests at Herndon, W. Va. Mr. Fannin is well pleased with the business outlook.

Charles Getz of the Eastern Kentucky Lumber Company at Anglin, Ky., was a recent Ashland visitor. Mr. Getz says his concern has no cause for complaint, its mill is in operation, a good prospect for a tide in the Little Sandy, and inquiries and orders plentiful.

The Standard Planing Mill Company reports business satisfactory. The great increase in buildings in Ashland this spring has materially affected this company's business, and the spring and summer months promise to be very good.

The Herrmann Lumber Company reports its line of dimension stock and railroad ties moving out well, and is satisfied with the situation.

H. O. Hughart of Grand Rapids, Mich., was a business visitor in Ashland recently.

F. O. Clapp of Boston, the oldest buyer of hardwood stocks, was in the city last week. Mr. Clapp reports hardwoods stronger than he has found them for years.

The J. W. Kitchen Lumber Company reports inquiries especially good in sap and No. 1 common, with prices satisfactory. J. W. Kitchen is at present on a trip through Ohio in the interest of his firm.

Just at present the prospect for building in Ashland is encouraging. Plans are under way

for a large fireproof hotel, several business houses, etc., which indicate the spring and summer months will be busy ones.

The last two weeks were very pleasing ones to our millmen, as they were favored with the best run of logs received out of Big Sandy this year and some very large poplar.

The Dimension Lumber Company has closed down after a few weeks' sawing, having sawed out its present supply of timber.

W. A. Cool of Cleveland, Ohio, was a recent caller on our millmen. Mr. Cool is very optimistic over present conditions and future prospects. His company is handling a large amount of fine poplar this year.

William Eckman of the Licking River Lumber Company returned to the mills at Farmers, Ky., this week after a two weeks' struggle with la grippe. Mr. Eckman reports business very good and the mill running steadily, having on hand at least six months' supply of logs.

J. H. Kester of the Southern Hardwood Company reports the receipt of a great number of inquiries and a number of very desirable orders at good prices.

B. F. Searcy of the Whisler & Searcy Company, Ironton, Ohio, was a business caller in our city en route to Huntington, W. Va. Mr. Searcy says business is good and its mills at Farmers, Ky., and Ironton, Ohio, are both in operation. The timber supply at its mills is not as large as usual, but the company has a good supply at its Farmers mills. Mr. Searcy recently left for Parkersburg, W. Va., to look after some of the timber which came out on the recent tide.

The Ironton Lumber Company, Ironton, Ohio, is operating steadily now, sawing mostly oak. Good reports come from the office. Prices hold firm.

The Yellow Poplar Lumber Company, Coalgrove, O., reports business fine in all its departments. Its domestic trade is very satisfactory. The export trade also looks encouraging. The company received a lot of logs on the last tide, due to its fine splash dam above the Breaks of the Big Sandy.

### ST. LOUIS

The Western Planing Mill and a large stock of lumber and finished products were recently destroyed by fire, incurring a loss of about \$30,000.

The Caia-Hurley Lumber Company was incorporated a few days ago with a capital stock, fully paid, of \$25,000. The incorporators are L. M. Cain of this city, who owns 149 shares; John T. Hurley of Webster Groves, Mo., a St. Louis suburb, 100 shares, and Eugene C. Slevin of Ferguson, Mo., another suburb, one share. The company will manufacture and deal in lumber.

Incidental to the above notice of incorporation may be mentioned the fact that on March 17 Mr. Cain was married to Miss Mary Grace Young of this city. Immediately after the ceremony the bridal pair took the noon train for the East, where they will spend their honeymoon.

The Brewer-Laidley Lumber Company has dissolved and has been succeeded by the R. A. Laidley Lumber Company. The new company is occupying the offices of the former company in the Fullerton building. It makes a specialty of railroad timber, handling oak ties, piling and car material. It owns two tie camps and two more will be added in the near future.

August H. Schnelle, president of the Schnelle & Querl Lumber Company, and one of the oldest lumbermen in the city, being seventy years old, was found dead at 9:30 on Saturday evening, March 12, in a downtown lodging house. It is supposed that he had a sudden attack of illness, probably heart trouble, and sought the first shelter he could find. Mr. Schnelle was born in Dayton, Ohio, in 1839, and came to

St. Louis when quite young. He leaves a wife, son and two daughters. His son, August H. Schnelle Jr., is secretary of the Beckers-Schnelle Lumber Company. Mr. Schnelle was active in lumber trade meetings and local associations and on Tuesday evening previous to his death attended the meeting of the Lumbermen's Club at the Jefferson.

A fine business is reported by the Boeckeler Lumber Company. This has been especially so since the weather has become more pleasant. The company has a very large local trade.

Two large pieces of real estate were recently purchased by C. F. Liebke, president of the C. F. Liebke Hardwood Lumber Company, making him the owner of a large tract of land in the northern section of the city, on part of which his lumber yard is situated, and the tract comprises some of the most valuable switching property in the city.

E. L. Page, the manager of the Alf. Bennett Lumber Company's hardwood department, reports a splendid trade in the upper grades with a good demand for lower. Mr. Page showed orders for seventy-two cars of hardwood booked on one day last week as evidence that business had started lively, and he says this is just a starter. He recently returned from the mills of the company at Turrell and Jonesboro, Ark., where he went to hasten out some urgent shipments. He reports conditions most satisfactory at those two producing points.

The Garetson-Greaseon Lumber Company reports quite an improvement in the hardwood trade during the past week or ten days.

George E. Cottrill, secretary of the American Hardwood Lumber Company, says there is a good demand for the better grades of hardwood lumber in all items on the list and good prices are being obtained. The lower grades are also in much better demand than they were a short time ago and prices are quite firm.

The Charles F. Luehrmann Hardwood Lumber Company is doing a steady business, a great deal better than during this period a year ago. It is having a particularly active demand for gum, one of its specialties.

George E. Hibbard, vice-president of the Steele & Hibbard Lumber Company, says there is a good demand for upper grades on all items on the hardwood list and lower grades are also being called for very freely. Better prices are being obtained on both grades.

The Lothman Cypress Company is having a fine cypress trade and there has been quite a stiffening in prices in consequence. According to the reports that it has received from the South, the stocks there are less than normal. Those well informed on cypress conditions look for one of the best seasons in many years.

The monthly meeting of the Lumbermen's Club of St. Louis was held at the Jefferson Hotel, Tuesday evening, March 8. There was a large attendance. Dinner was served at 6:30 and the business meeting followed. The speaker of the evening was E. G. Lewis, mayor of University City and publisher of the Woman's Magazine. He spoke on "The Subway," a project he is planning to build and which will extend from University City, immediately west of the city of St. Louis, to the downtown district. His remarks were most enthusiastically received. He also extended an invitation to the club to visit University City and the plant of the Woman's Magazine.

### NEW ORLEANS

New Orleans' newest institution in the way of a commercial organization, the Lumbermen's Club, was formally organized at a meeting of local lumbermen March 18. George E. Watson, secretary of the Southern Cypress Manufacturers' Association, was elected to the presidency. The other officers are as follows: First vice-president, C. W. Robinson of the C. W.

Robert A. Lumber Company; second vice-president, W. B. Young of the Lucas E. Moore Stave Company; treasurer, W. E. Hoshall of Hoshall & McDonald Brothers; secretary, L. Palmer, secretary of the National Lumber Exporters' Association. The primary object of the organization is social intercourse, but it will also embody some business features.

Promoters of a large hardwood manufactory are reported to be negotiating for a site in St. Bernard parish, just below New Orleans, on which to build a large plant. The negotiations have been pending some time, but the identity of the men behind the project has not been disclosed. It is said the new company proposes to erect a \$250,000 plant.

In a sensational petition filed in the federal court here Lauritz and Carl G. Peterson, lumber importers of Hamburg, Germany, have asked for the appointment of a receiver for the Hinton-White Lumber Company, lumber exporters of New Orleans. Violations of contract by fraud and conspiracy are alleged. It is charged that the Hinton-White company, after having made certain contracts with the petitioners, conspired with the Yellow Pine Company of Louisiana and Carl H. Georg of New Orleans to defraud the complainants by conceiving and effecting a series of transactions which resulted in losses to the complainant amounting to \$22,559.75. The petition further alleges that the corporation is insolvent and that its affairs are being mismanaged to the detriment of its creditors. Hence the request for a receiver.

The Newport Stave Company of Eldorado, Ark., will build a large stave factory at Robeline, La.

The Logan Lumber Company is completing at Mansfield, La., a 60,000-foot daily capacity mill to cut pine and hardwood timber.

## MILWAUKEE

There are rumors afloat in Milwaukee that Fred Herrick, well-known lumberman of this city, is one of the incorporators of the Milwaukee Lumber Company, a new concern which is being organized in the state of Idaho. It is said that the new company will erect a new steel mill.

W. E. Allen, president of the W. E. Allen Company, wholesale lumbermen of Milwaukee, has returned from a business trip in the northern Wisconsin lumber country.

Patrick Flannigan, president of the Sagola Lumber Company of Sagola, Mich., called upon the Milwaukee trade recently.

T. J. Hughes, vice-president of the Cooper-Hughes Land & Lumber Company of Milwaukee and Great Falls, Mont., has left Milwaukee for a few months' stay at Great Falls. W. E. Cooper, Milwaukee wholesale lumberman, is president of the company.

G. M. Maxson, president of the Maxson Lumber Company, Milwaukee wholesalers, has returned from a business trip in northern Wisconsin.

Plans have been completed by the recently organized North Milwaukee Table Company for the erection of a new two-story factory building. It will be of mill construction and will permit of the employment of fifty people. It will cost \$5,000.

The James L. Gates Land Company of Milwaukee, of which James L. Gates, millionaire lumberman, is president, has won out in the suit brought against it by Richard L. Henschel. The suit, brought in the lower courts and taken to the circuit court, was an action to recover \$17,017, the alleged commission due on arranging the sale of 26,180 acres of land in Price county, Wisconsin. The plaintiff, Henschel, had been awarded a verdict in the lower court for a little more than \$7,000.

The Fond du Lac Church Furnishing Company of Fond du Lac suffered a loss of about \$15,000 recently as the result of the burning of one of its dry kilns filled with stock. The entire plant

narrowly escaped destruction. The company has presented a check for \$100 to the firemen's pension fund of Fond du Lac as an appreciation of the services rendered at the fire.

The plant of the Green Bay Box & Lumber Company of Green Bay has been placed in operation after an idleness of several weeks.

Ebenreiter & Hildebrand of Sheboygan are erecting an addition that will double the size of their present plant. New equipment, including combination rip and cut-off saws, planers, shapers and boring machines, will be installed.

Experienced rivermen of Wisconsin are predicting that log driving will be hampered this spring by low water in the rivers. While the winter snows were heavy, there was no frost in the ground and little surface water resulted. There have been but few spring rains as yet.

The recent warm weather has raised havoc with logging in the Wisconsin lumber country and it is expected that operations will be brought to a close soon. The season has been especially favorable.

W. E. Hallenbeck, who recently disposed of his interests in the Bird & Wells Lumber Company of Wausaukee and resigned as woods and railroad superintendent of the company, has left for Portland, Ore., in the interests of the J. W. Wells Lumber Company of Menominee, Mich.

The new plant of the Sheboygan Fruit Box Company of Sheboygan has been placed in operation. The main building is 56x98 feet in dimensions and is three stories high. A new brick power house 40x50 feet has also been completed. The old factory building will be used as a warehouse.

The Kaukauna Land, Lumber & Supply Company of Kaukauna, which recently purchased 3,000 acres of timber land in Forest county, on which there is 25,000,000 feet of pine and hardwood, has commenced the erection of a nine-foot dam across the Peshtigo river to facilitate logging operations.

The Mosinee Land, Log & Timber Company of Mosinee is contemplating the erection of a new saw mill to replace its present plant at Flanner. It is expected that the new mill will be located at Mosinee and that it will cost in the neighborhood of \$45,000.

Statistics show that nearly 1,000,000 feet of logs were hauled by team to New London during the past winter. Of this amount the Hatten Lumber Company received 300,000 feet, while the chair factory took 70,000 feet.

The Berlin Machine Works of Beloit, manufacturers of woodworking machinery, has announced that it will erect a new shop this summer which will be 300x400 feet in dimensions and cost in the neighborhood of \$500,000. In addition, the company will erect a new three-story office building. All the new buildings will adjoin the company's present plant and will occupy a site recently purchased. When the new structures have been completed it will be possible to employ several hundred more people than at the present time. The main building will be of saw-tooth construction and will be strictly modern in regard to design and equipment.

The Badger State Lumber Company of Durand has filed an amendment to its articles of incorporation, changing its location to Menominee, Wis.

The H. & T. Suter Lumber Company has completed its logging operations at Plum City. More than 1,000,000 feet of hardwood was cut.

Nearly all the sawmills at Wausau, Edgar and surrounding towns have resumed operations and are now running on day and night shifts.

The Johnson Creek Lumber & Shingle Company of Knowlton has completed its logging season. It has purchased 1,500,000 feet of logs from the United States Leather Company.

Lumbermen of northern Wisconsin are organizing an association for the purpose of seeing that the taxes in their districts are properly apportioned and disbursed. At a recent meeting held at Park Falls steps in the organization were

perfected and plans outlined. The Foster-Latimer Lumber Company, the Atwood Lumber Company, the Roddis Lumber & Veneer Company, the Mellen Lumber Company and the Osborne interests were represented. Headquarters will be opened at some central point and two or three salaried men will be hired to look after the interests of the association.

Skies will be manufactured on a large scale at Ashland by Askel Holter. Orders for more than 7,000 pair have already been secured by Mr. Holter.

A trainload of more than 4,000 refrigerators were shipped to Fort Worth, Tex., by the Gurney Refrigerator Company of Fond du Lac. It is claimed that this was the largest trainload of refrigerators ever shipped in the United States.

The Sawyer-Goodman Lumber Company, the Republic Lumber Company and the Crawford Lumber Company of Marinette were heavy losers in the fire which recently destroyed the Ann Arbor car ferry No. 1 at Manistowoc. It is reported that the loss will fall upon the Ann Arbor company.

## MINNEAPOLIS

Logging and hauling came to a sudden stop in Minnesota and Wisconsin last week. The thaw was earlier than a good many would have liked to see, and some logs will be left in the woods. It also put a stop to some cutting that would have been done if roads had promised to stay. Warmer weather began about the first of the month and made trouble, but the loggers all expected a turn to come, and were not prepared for the steady rise in the mercury which put them so completely out of business on the ice roads.

Twin City wholesalers who have been prospecting in Wisconsin for stocks say that the cut of the past season has been very fair, as logging conditions were ideal from early in the winter up to March 1. The present high prices on all better grades of northern hardwood have a tendency to make the mills hold out for fancy figures this year on contracts, and the work of closing for wholesale supplies has been rather slow, with many hitches.

The Minnesota Conservation & Agricultural Development Congress, which recently held a four-day meeting in St. Paul, adopted resolutions which include a demand for change in the state law, so that homeseekers can buy state land with the timber, and cut their own logs to pay their way while clearing a farm. The congress, which included 3,000 delegates, also declared for a state good roads tax and a water supply commission. J. E. Rhodes addressed it on "Forest Conservation in Minnesota."

J. K. Stack, Jr., of Escanaba, Mich., manager of the hardwood department of the Escanaba Lumber Company, was here a few days ago on business with wholesale dealers in this market.

R. F. Krebs of the Krebs-Scheve Lumber Company, St. Louis, has been calling on the factory trade in the Twin Cities and making some sales from his firm's hardwood stocks.

F. M. Bartelme, local wholesaler of hardwood and hemlock lumber, is back from a trip among the Wisconsin hardwood mills, where he found logging being spoiled by the early thaw, but with general indications of a good spring cut of hardwood nevertheless, on account of prior conditions being so good.

C. F. Osborne of Osborne & Clark, Minneapolis, has been hampered of late by jury service, which has taken him away from business at a bad time.

Webster & Whipple, wholesale dealers here who have specialized in factory lumber, have added a hardwood department. It is in charge of W. H. Kemper, Jr., who was formerly with the Mason-Donaldson Lumber Company of Rhineland, Wis. They will have a line of northern

hardwoods to begin with, and later expect to handle some southern stocks.

### SAGINAW VALLEY

The hardwood lumber industry made a fairly good showing last year, taking into account the fact that conditions of the market during the first eight months of the year were not favorable. Reports from the following firms in the Saginaw Valley and eastern Michigan are as follows:

	Feet.
W. D. Young & Co., Bay City.....	22,659,549
Richardson Lumber Co., Bay City and Alpena (2 mills).....	7,550,000
Campbell-Brown Lumber Co., Bay City.....	4,327,000
Kneeland-Bigelow Co., Bay City....	9,256,057
Knapp & Scott, Bay City.....	2,509,000
Kneeland, Buell & Bigelow, Bay City	9,182,996
S. G. M. Gates Estate, Bay City....	1,834,000
Bliss & Van Auken, Saginaw.....	8,000,000
Michelson-Hanson Co., Lewiston....	10,369,000
Johannesburg Mfg. Co., Johannesburg	8,780,445
L. Jensen, Salling.....	2,000,000
Batchelor Timber Co., West Branch.	5,000,000
Estate L. Cornwell, Wolverine.....	1,844,000
T. E. Douglas & Co., Lovells.....	449,614
Embury-Martin Lumber Co., Cheboy- gan.....	3,000,000
M. D. Olds, Cheboygan.....	3,630,007
R. Hanson & Sons, Grayling.....	3,305,969
Robinson Lumber Co., South Branch.	2,000,000
Lobdell & Churchill Co., Onaway....	15,400,000
Island Mill Lumber Co., Alpena.....	4,200,000
Churchill Lumber Co., Alpena.....	4,000,000
S. F. Derry & Co., Millersburg.....	7,299,944
H. M. Loud's Sons Co., Au Sable....	5,922,740
Andrew Kent, Omer.....	500,000
Masters & Bowden, Ossineke.....	100,000
Macomber & Bale, Black River.....	500,000
John Beck, Alpena.....	545,300
D. Fleming, Rose City.....	45,000
N. Michelson Lumber Co., Michelson	300,000
Gardner, Peterman & Co., Onaway..	1,500,000
Downie & Son, Harrisville.....	50,000
Yuill & Son, Harrisville.....	25,000
J. Kantzler & Son, East Tawas.....	392,000
W. A. Bates, Lupton.....	25,000
J. F. Spens & Bro., Rogers.....	230,590
Nelson Lumber Co., Cheboygan.....	100,000
R. P. Holihan, Millersburg.....	600,000
Robert Wilkins, Turner.....	400,000
Wm. Colby, Hubbard Lake.....	150,000
Gustave Brilinski, Ossineke.....	400,000
Matt Jordan, Melvor.....	240,000
Harman Bros. & Johnson, Au Gres..	375,000
A. Wheeler, Au Gres.....	100,000
O. J. Peters, Emery Junction.....	100,000
Harriet Leslie & Sons, Wittemore..	218,000
Robinson Bros., Long Rapids.....	275,000
E. Truax, Long Rapids.....	202,000
H. E. Buchanan, Selina.....	1,000,000
W. Lewandowski, Posen.....	60,000
Robinson & Stevens, Posen.....	900,000
Michigan Cooperaage Co., Turner....	3,500,000
Davidson & McDonald, Black River..	250,000
F. G. Cowley, Oscoda.....	300,000
J. McCready, Twinning.....	60,000
D. McRae, Greenbush.....	15,000
W. Kennedy, Bolton.....	50,000
Gardner & Richards, East Tawas....	550,000
A. Silks, Hawks.....	30,000
Forest Lumber Co., Tower.....	2,150,000
Prescott-Miller Co., Rose City.....	4,000,000
Herman Hoeft & Son, Rogers City..	1,600,000
F. W. Gilchrist (Est.), Alpena.....	5,000,000

Stephens Lumber Co. (Est.), Waters..	5,500,000

Total.....182,708,881

The cut of the last three named firms is estimated, no official report having been received. The report of the cut covers the territory north of the Saginaw river to Cheboygan, inclusive, and taking in the Huron shore and Mackinaw division of the Michigan Central, and Detroit & Mackinaw Railway mills.

There are, it is estimated, about seventy-five small portable mills in this territory cutting 25,000 feet and upward from which no reports are at hand. The pine and hemlock output of these plants is not included in the foregoing figures.

The mill owned by George Redhead, near Alabaster, which has been sawing lumber for Gardner & Richards of East Tawas, was burned last week, involving a loss of \$1,500 with no insurance.

Ross & Wentworth of Bay City are bringing 4,000,000 feet of logs from Cheboygan county to Bay City by rail.

Frank Wood has finished putting in 1,500,000 feet of maple near Gaylord.

The hardwood lumber industry in the valley and eastern Michigan was never in more satisfactory condition than right now. Lumber manufacturers and dealers experience no difficulty in disposing of all the stock they can produce at top prices and many firms have sold stock to be cut. It is estimated that more than 100,000,000 feet in the lower peninsula has been sold for future delivery which is yet in the log.

Logging operations of all small operators are winding up. A number of large operators log the year through. North of Bay City in Otsego county there was hauling on sleds all last week, but the roads are becoming soft and the sleighing there will soon be gone.

### CADILLAC

D. H. Day, the big hardwood operator of Glen Haven, is having a large smoke stack built by the Cudney Boiler Works of Cadillac.

The same company is repairing logging locomotives for the Cummer-Diggins Company of Cadillac and the Mitchell Brothers Company of Jennings.

W. W. Mitchell and wife have started on an eastern trip. They will spend the Easter season at Atlantic City and visit their daughter at Washington, D. C., before returning home.

A. P. Irish of the Fuller & Rice Lumber & Manufacturing Company, Benjamin Wolf of Wolf Brothers Company, and Fred H. Emery, all of Grand Rapids, were among the lumbermen visiting this city this week.

W. S. Schoaf, superintendent of Estate of David Ward, Deward, was a recent Cadillac business visitor.

The Williams Brothers Company of this city and Manton has in stock more than fifty per cent of the last blocks that will be used by the shoe industry in America during 1911. The factory at Manton covers five acres and has a storage capacity of 1,500,000 blocks. The Cadillac plant covers seven acres and has a storage capacity of 2,000,000 blocks. This industry was started by George F. Williams in Manton more than twenty-five years ago, and has gradually grown to its present dimensions. None but the best maple and basswood are used in the manufacture of these blocks and extreme care is exercised in drying the stock. Only the rough blocks are turned out in Michigan, the finished forms being left to the manufacturers in the East. Quite a number of carloads of the rough product are exported in the course of a year.

Nessen City lumbermen have put in a larger quantity of logs this winter than usual. These logs go largely to the Buckley-Douglas Lumber Company at Manistee.

Two years ago the veneer plant at Reed City was partially destroyed by fire and has been closed ever since. There is every indication that the plant will be rebuilt. A new company has been organized with a capital of \$75,000, part of which has been subscribed.

The Pringle Inn at Mears, one of the old landmarks of lumbering days between Muskegon and Ludington, has been burned. At one time this was the only stopping place of the stage line between the two cities.

Congress has made an appropriation of \$20,000 for the improvement of Arcadia Harbor, Manistee County. The harbor at Arcadia has been in such condition that lake boats of any size could not enter.

Thursday of this week, March 24, Examiner McCormack, acting for the Interstate Commerce Commission, will hear at Cadillac the complaint of the manufacturers of lower Michigan against the transcontinental railroads for discriminating rates on hardwood lumber and flooring to Pacific Coast terminals. Wm. A. Percy of Memphis, Tenn., has been engaged as attorney for the manufacturers. Representatives of various railroads, the Michigan Railroad Commission, besides the interested manufacturers are expected to be present.

### DETROIT

The retail lumber dealers of Detroit, including all of the hardwood dealers, gave a banquet last Friday night at the Log Cabin Inn in honor of the wholesale dealers, and a most enjoyable evening resulted. Eighty-six lumbermen were present. Besides a fine feed, to which the lumbermen did justice, there was an enjoyable musical and literary program. The "joy committee" which arranged for the good things consisted of E. E. Hartwick, A. P. Terbes, F. J. Weber and W. A. C. Miller.

R. R. Clark of the Peninsula Bark & Lumber Company of Sault Ste. Marie, Mich., stopped off in Detroit last week en route to his home from the eastern markets. Mr. Clark said that he found the hardwood market much better in the West than in the East. He said the demand in the Middle West for northern hardwoods is exceptionally "nealthy."

W. W. Kelly of the Brownlee-Kelly Company has returned from his eastern vacation and is now in Cheboygan superintending the sawing of a large lot of hardwood lumber.

A startling illustration of the great boom in the automobile industry in Detroit occurred here last week. The Detroit Column Company, the largest manufacturers of wooden columns in the country and large consumers of hardwoods, decided to erect a new plant to accommodate its rapidly increasing business. A site was picked out and work started on a fine new brick building at the north end of the city. The walls had risen but a few feet above the ground when along came stockholders of the Warren Motor Car Company, who were looking for a plant and offered a tempting figure for the buildings under way, and secured an option on the same. The first of the week the motor car company took up the option and closed the deal and will now go ahead and complete the building. The Detroit Column Company will remain in its old plant, at Holden and the Michigan Central railroad, until a new site can be secured and new arrangements for building made. These auto companies are whirlwinds when they get down to business.

J. F. Deacon, wholesale dealer, 60 Buhi block, says that business has improved rapidly in the past couple of weeks.

The Dwight Lumber Company is extremely busy these days. Orders for its special brand of thin hardwood flooring are pouring in in great volume. "We are way behind on our orders for thin flooring," said Secretary John Lodge of the company, "and the factory is working hard to catch up. It is a pleasant sort of worry, however." The company has secured space at the Detroit Industrial Exposition this summer for an exhibit of its thin hardwood flooring.

"The spring boom is well under way and business is improving rapidly," is the report from E. W. Leech. "All indications are for big business this spring and summer."

Thomas Forman of the Thomas Forman Company was out of the city on a business trip the latter part of last week.

Marcus Schaff, the new state forester, just returned from a trip through northern Michigan and says that in his opinion the first thing for the state to take up is the matter of fire protection. "Preserve what timber we have now and never mind about planting more," is the way Mr. Schaff sums it up.

### GRAND RAPIDS

The Lumbermen's Club will hold its regular monthly business meeting Tuesday evening, March 29.

The Northland Lumber Company, in which members of the Wolf-Lockwood Lumber Company of this city are interested, with mills at

Green Bay, Wis., will begin cutting April 1. The company has been delayed somewhat by the railroads and now has a season's cut ahead of 15,000,000 feet, about 10,000,000 feet of which is hardwood and the rest hemlock.

Edward Lowe is home from southern California, where he has been spending the winter.

E. L. Ewing of this city, who represents furniture manufacturers and lumber dealers here as traffic manager, will go to New York March 27 to attend the meeting of the official classification committee of railroads. This committee has under consideration eighteen proposed changes in the furniture classifications, also changes in other lines that affect Grand Rapids.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

The conditions which prevailed in the lumber business before the panic are being rapidly approached in the local trade, although in a saner and more conservative way. With few exceptions, stocks are increasing steadily in demand, and prices are strengthening. Basswood might be said to be an exception to this rule, as the stocks were moved early and a consequent weakening has resulted. While the actual volume of business is not as great as might be expected, the advance in prices is sufficient to make up for this deficiency. Lumbermen in general are inclined to be optimistic over the situation, and all view the gradual but steady improvement with complacency. It might be said that the wagon trade of Chicago is better than the trade in carload lots.

Oak shows a continued increase in demand and decrease in supply, and hence a gradual but unwavering advance in prices. Quartered white oak is probably slightly slower than when last reported, prices from \$79 to \$83 being quoted on firsts and seconds, \$81 being an average price. Plain white oak is worth, for firsts and seconds, around \$50, though prices have ranged from \$48 to \$57. The Chicago market is never very strong on white oak, plain-sawn, and hence the wide fluctuations in prices, as they are governed by individual demand and necessity. Plain red oak is still a scarce article; few firms report having all the stock which they could dispose of. Prices vary according to dryness of lumber. Common plain red oak brings from \$33 to \$34 and firsts and seconds \$48 to \$50 for 1" stock; thicker stock is worth about \$2 more. There is a great demand and likewise a great scarcity of oak step stuff, both red and white, from 1¼" to 1½" in thickness.

The cypress trade maintains its firm position and steady advance, both in prices and volume of business. There is no boom in this material, but a good healthy increase in trade. Shop and select show the principal improvement. Tank stock and shop are both rather short, generally.

New shipments of dry birch stock are not due before June in the Chicago market, and there is still a scarcity in firsts and seconds. The lower grades of birch are showing a slight tendency to pick up in some quarters. Firsts and seconds, 1" thick, are quoted at from \$36 to \$40, the average price per thousand being about \$38. An additional \$2 to \$3 is charged for thicker stock. No. 1 common, 1 inch thick, is worth \$25 to \$24.

Maple continues in great and increasing demand, and there is now no dry stock to speak of in the Chicago market. Firsts and seconds, 1 inch, bring \$33 and \$34.

As stated, basswood has weakened slightly. Firsts and seconds are now worth \$37 and \$38.

Poplar panels still sell for almost any price, according to individual requirements of consum-

ers. Poplar box boards are bringing from \$62 to \$65 and average about \$64; firsts and seconds are worth about \$55.

The trade in 1-inch ash is rather slow in most quarters, firsts and seconds bringing \$44. Thicker stock is in better demand.

Both sap and red gum are noticeably stronger than a short time ago, as stocks are lower and the demand continues. Firsts and seconds sap gum is worth \$23; No. 1 common, \$18.50, and No. 2 common, \$16. Firsts and seconds red gum is quoted as high as \$33.

Cherry continues to hold a high price and is in great demand whenever it can be secured.

Good prices and a large volume of trade continue to keep the mahogany men in good spirits. Uppers show an advance of almost three cents per superficial foot. The large manufacturers are sending out notices of an advance in the near future.

Oak piling is bringing from twelve to eighteen cents in the Chicago market. Mixed oak ties are worth about 55 cents and white oak ties average 70 cents. The demand for heavy construction timber is rather lax at present. Mixed oak for this purpose averages \$26 and white oak about \$34.

Manufacturers of flooring report excellent prospects for a steady and sane advance in prices and general business conditions. The building trade is lively and consumers in general do not refuse orders at the prevailing advanced prices.

### NEW YORK

The local hardwood market continues strong; prices are firm and strengthening all along the line. Plain and quartered oak, poplar, ash, birch, maple and chestnut seem to be most active. So far as good-grade lumber is concerned, its market is assured for the spring and summer trade, and although prices are now on a fairly high range, there is every indication that they will advance, as supplies are limited. While for a time it looked as if there were but little opportunity for changes in prices on low-grade stock, that feeling has given way, and the general impression prevails that low-grade hardwoods are going to enjoy a profitable business this spring and summer. The scarcity of high-grade lumber is bound to affect the low grades and bring them more generally into use, but aside from that the general business developments in low-grade consuming channels give evidence of a fair volume of spring and summer trade, which cannot help but be reflected in firm and better prices.

### BUFFALO

There is some report of slacking off in the demand for hardwood lumber. It is not at all serious and is thought to be on account of the weather, the fear of strikes and the like, for the business outlook in general is good enough.

Some of the dealers refuse to see anything off in any direction and say that they are doing a full business and do not look for any weakness this spring.

Quartered oak and poplar still are the big sellers if they are to be had, and plain oak, chestnut and birch follow in their places as a second choice. The demand for maple is large and prices are higher than they were awhile ago. Basswood and elm go if they are in stock.

Hardwood dealers are paying more and more attention to yellow pine and cypress and some of them are buying Pacific coast woods, though that latter shift is being made by white-pine dealers more than any others, on account of that wood running so short.

All prices are strong and there is every indication of an advance in almost everything before long if business remains good, for the cost of production is greater than it was and if the jobber cannot get more also he is going to lose.

### PITTSBURG

There is quite a stir among Pittsburg hardwood men this week and in general they are reporting much better business. In fact, it seems to be the case this year that when there is any business going, the hardwood fellows get it. The proportionate demand for good hardwood compared with fine hemlock and other lumber is increasing in Pittsburg right along and there is every reason to believe that this year will be a banner period for the hardwood trade if business conditions are at all favorable. The trouble just now is with the strikes. The Philadelphia situation is not one that affords much encouragement and the threatened coal strike which may be decided upon at Cincinnati this week would be a very serious injury to Greater Pittsburg business. Outside of this trouble things are moving along fairly well.

Factory and manufacturing trade in general is increasing steadily and purchasing agents seem disposed to pay better prices for lumber than they have offered for many months. The railroads are coming into the market with large requisitions for hardwood timbers and other heavy stocks. Especially encouraging at this time is the large amount of mixed hardwood being sold to coal mining companies. Mining operations have been increasing very fast of late and improvements and extensions are the order all along the line even in the face of a possible coal strike. The sales for government work have also been fairly good, especially in the way of prices obtained. Hardwood mills are running steadily, many of them having started up recently after the heavy snows were off. The tone of quotations is good with considerable prospect of gains in prices soon.

### BOSTON

The demand for hardwood lumber is improving and prices are becoming much firmer. Manufacturers in most cases are independent holders and are not offering large stocks of desirable lumber. Wholesalers are more careful to have lots of lumber located before making sales than they were. Inquiries for stock are numerous, and a good market is anticipated from now on. Retail yards are carrying rather moderate stocks. Furniture manufacturers are more actively engaged. The piano trade has been fairly busy and is constantly in the market for supplies.

One of the strongest features of the market is quartered oak. Demand is good and offerings are small. Most dealers are asking \$90 for one-inch, one's and two's and sales are being made on this basis. Plain oak is very firm and in better request. Maple flooring continues high and firm. Ash is well held. Quite a demand for basswood is reported, but offerings are not large. Cypress and whitewood are firm under small offerings of desirable grades.

# GIBSON TALLY BOOK

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets—4x8 $\frac{1}{2}$  inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket.

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

Special, patented, triplicate tally tickets supplied, printed on waterproof paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability, convenience, accuracy, and for systematizing the inspection and measurement of lumber.

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

## PRICE LIST

Aluminum Tally Covers, each	\$ 1.00
Aluminum Tally Covers, per dozen	10.00

## BALTIMORE

The hardwood trade continues to be of a favorable character. Here and there a wholesaler reports that business is quiet, but the fact remains that the mills seem to have all the orders which they can take care of, taken at prices that tend to stimulate the production. Manufacturers report that they have no large accumulations and frequently are not in a position to make deliveries as promptly as dealers desire. This, of course, applies more to the better grades than to the low-grade stocks. However, even the low grade situation is decidedly more favorable.

Prices are still lower than the producers would like to see them, but the pressure has lessened so materially as to admit of a decided improvement in values. The offerings here are held down to proportions that cause prices to remain very firm or perhaps move up somewhat. No important advances have been made of late except in certain grades or woods. The demand for white gum has enabled manufacturers to put up their figures very appreciably. The offers for oak, ash and other woods are sufficiently high to receive attention and according to even the most conservative firms the inquiry is quite brisk, and there seems to be every indication that the requirements of the yards will increase, prompting them to be more liberal in their prices. The demand for poplar is about as active as ever and the mills are called on to make extensive shipments for domestic trade, with the foreign business also expanding, though the situation in Great Britain is not yet satisfactory, largely because of the political conditions. With the prospect of a new election at no very distant date and a general belief that none of the important questions of government are settled, business men generally are disposed to go slow and to keep stocks down as much as possible. This also applies in a measure to oak and other woods, but the withdrawals have nevertheless been heavy enough to reduce further the available stocks, and the buyers are more receptive to tenders. Inquiry for export is quite frequent, and all the indications point to further recovery in the near future.

## CLEVELAND

The advent of spring has done much to revive the hardwood business in this territory. Building operations supply quite a good percentage of the demand here and these look good to the hardwood men.

Upper grades of quartered oak and mahogany particularly are meeting with ready sale, although the lower grades are not being passed up. Dealers look for a very active call along all lines before the season is very far advanced.

The automobile industry continues to absorb all the wide poplar. The only fear entertained here by the dealers is that the call for it will become so keen that other materials will be substituted.

## COLUMBUS

Practically every variety of hardwoods has improved during the past fortnight. While the improvement might not be very noticeable, still there is a better demand and prices show a tendency to become stronger. The brighter weather which has succeeded the winter months is believed to be the principal cause for this change. Lumber manufacturers and jobbers unite in the belief that the improvement will continue and that prices will be boosted appreciably soon.

The car shortage is having some effect on the trade. Several complaints have been heard because of a lack of transportation facilities, especially in several southern states. Since the

fine weather has appeared, purchasers are demanding delivery and several railroads have been unable to take care of the increased movement. However, better conditions are expected soon. Manufacturing establishments are requiring a larger stock and this is being reflected on the hardwood trade. Orders from all kinds of factories are steady and inquiries are increasing. Furniture, implement and carriage plants are requiring a much larger supply of hardwoods.

No recessions have been reported and the whole tendency of the market is to higher prices. This is especially true in oak. The supply of quartered oak is limited and prices are firm to the extreme. Both red and white oak are in good demand. Quotations show that firsts and seconds are held at about \$50 at the Ohio river and No. 1 common at \$32. Chestnut is firm and good prices are easily secured. Hickory and walnut are steady. Poplar is one of the strongest points in the market.

## EVANSVILLE

The local market continues active, with mills operating steadily and a fair log supply. It is thought that manufacturers will have no trouble to stock their mills, as the weather prevalent for the last two or three weeks will be beneficial to roads and logs will soon be coming out in plenty. It is believed March will be a big month in point of shipments.

The local furniture trade is having a good share of prosperity. They are all operating on full time and are not overstocked. Quartered oak stocks are broken badly, some of it does not stay on sticks long enough to get shipping dry before it is snatched up. Poplar and ash are going well.

## CINCINNATI

While some of the Cincinnati lumbermen profess to be doing a good volume of business, there are many others who claim their business is not what was expected at this season. The buying of hardwoods during the past fortnight seems to have fallen off somewhat, and the cause is not apparent. This summary of the conditions is brought about by comparison with the conditions which prevailed at the opening of February, when it was freely prophesied that business would steadily improve.

Quarter-sawed white oak meets a steady demand and there is increasing difficulty in getting stock. There is a fair supply of common quarter-sawed white oak and prices remain strong. Red oak is in good request, while the stocks are fully equal to the wants of the market at present. Poplar remains a strong feature of the market, with a ready sale for clear, wide stock. The demand created by the automobile trade is still adding strength to the market. There is also a good movement of all ordinary grades, as well as the low grades. The receipts of poplar continue good and the market is well supplied. Ash is more active, owing to the steady improvement in the wagon and carriage making industries, there is a good demand for heavy stock for wagon-makers, while the supply is not abundant. Hickory is meeting with an improved demand for wagon and carriage makers' grades, with a steady movement of wheel makers' and shaft and pole stock. Red gum is steadily growing as a feature of the hardwood market, with more buying by furniture manufacturers, though most of the orders are for limited lots, scarcely ever exceeding carload orders. A slight improvement is noted in the buying for the export trade, though not sufficient to encourage any predictions as to the future. Walnut is still being piled up and firmly held at prices which evidence a strong confidence in the future. It is safe to say that there is more walnut piled up in storage yards

at present than has been known for many years. Cypress is being cut and taken care of for the future of the foreign demand. Cypress is steadily improving, with an excellent movement of short stuff. Thick tank stock is meeting with good sale. Building grades are showing more activity, while there is an intimation of strength in prices.

Furniture manufacturers are all running full time, with difficulty in securing a sufficient number of good cabinet-makers to meet the demands of the trade. The demand for all classes of furniture is steadily increasing. The manufacturers of desks and office furniture are busier than at any time since the early months of 1907.

## TOLEDO

All hardwoods show further improvement and the local yards are busy looking after increased orders. Building business, not only in Toledo, but throughout this section, is active and this has brought a heavy demand for many hardwoods for building purposes. There has been a splendid demand for oak at good prices. Local stocks of high-grade poplar and birch are somewhat broken. Cypress is still growing in favor and there never was a time in this market when the prospects for business were better than at the present time. Indications point to the heaviest consumption of cypress by the building trades ever known in this section. Bay poplar, a material which has been largely neglected has received new impetus, and is at present finding a ready market. Ash, maple and hickory are in good demand for manufacturing purposes and dry stocks are said to be below normal. There has been a fair call for gum, and basswood has been by no means neglected. The entire hardwood market shows strength, with the exception of low-grade poplar, which is very plentiful and moving under uncertain conditions.

## INDIANAPOLIS

The local hardwood situation is about all that could be asked for. There is a brisk demand, prices are fair and shipments are moving in a satisfactory manner. There is also an encouraging outlook, with a result that it is generally believed this will be the best hardwood year of many years.

Manufacturing plants using hardwoods are, as a rule, running to full capacity. Furniture and vehicle plants are busy and those concerns manufacturing hardwoods for interior trim work have all of the orders they can hope to fill for some weeks to come.

Prices are slightly higher than they were at this time a year ago. All grades of oak are strong, with a good demand in other lines.

## MEMPHIS

The demand for hardwood lumber is very satisfactory and the volume of business shows a steady increase. The supply of shipping dry stock is being reduced through the heavy shipments under way and altogether the market presents a very solid front. Buyers are in the market on a liberal scale for both domestic and foreign use and prices are firm, with an upward tendency. There is relatively little plain or quarter sawn red or white oak ready for immediate shipment and holders of lumber of this character are able to secure most satisfactory prices therefor. The demand for oak extends even to the lower grades. Ash is also in very satisfactory request in all grades, while there is no difficulty in disposing of all the poplar offered in this market. Red gum is in excellent demand in firsts and seconds and there is also a very satisfactory demand for this in the lower grades. Sap gum is wanted in the higher

grades, but Nos. 1, 2 and 3 common are slow to sell, being in less active demand than red gum of the same grade. There is a very good business under way in cottonwood in box boards and the upper grades generally, but the lower grades are moving in only a moderate way. Cypress is moving at a very good rate in both the upper and lower grades with the exception of Nos. 1 and 2 common. The demand for the latter at the moment is comparatively slow. Production of hardwood lumber in the Memphis territory is on the increase, but there is no special accumulation in any direction and in the case of high grade lumber the scarcity is becoming more prominent, especially in stock ready for immediate shipment.

## NASHVILLE

The hardwood market continues quite strong, especially in the upper grades, and this condition in turn is being reflected even in the lower grades of timber. Within the near future renewed activity is expected in the building line, for the spring building season will be on in earnest. This in turn will create much activity in the line of manufactured building materials, of which there is a great deal in Nashville. The consuming factories are getting into the market and quite a demand from them is noted just now. Some little complaint is being made by lumbermen regarding difficulty in getting necessary cars for shipments.

High grade wide poplar is bringing fancy prices. Oak, ash, birch, maple, elm, chestnut and cottonwood are moving freely. Good red gum is finding ready sale, this wood being freely used now by furniture factories. The approach of the building season is creating renewed activity in the demand for cypress, especially from the sash and door people. The box factories are buying freely. Much activity is noted on Cumberland river in the logging line, many big rafts and tows of timber coming down of late.

## LOUISVILLE

Reports as to the condition of business in this market are uniform to the effect that the demand has improved generally and that all grades of stock are moving more freely than since the active period of last year. Some fear was felt a few months ago that stocks would be depleted by the increased demand before the mills could provide lumber to take the place of that moved, and the late starting of the mills, due to bad weather and heavy roads, has made it plain that dry stocks will be at a premium before the summer is over. Prices are strong, and while no marked advances have been made of late, it is safe to say that quotations will go higher before long. The demand for quartered oak is good, while plain oak and poplar are being sold in large lots. The automobile body manufacturers are buying wide poplar of good grade, the increased production of cars this year justifying the anticipations of manufacturers who have been paying attention to this branch of their business. Veneers and dimension stock are in improved condition, and mahogany is selling in good volume, building conditions favoring an unusually large consumption in this direction.

## ASHLAND

Inquiries of the last two weeks show demand good, with prices firm and in some instances slightly advanced. Plain and quartered oak remains firm with stocks much broken. Dry Nos. 1 and 2 common are very scarce in this market on account of large shipments to furniture and hardwood flooring manufacturers. The demand for car and construction oak continues to grow, and orders are being placed with our millmen very freely, and a number of orders

You know what Hardwood Record is the best lumber paper published.

Something about The Woman Beautiful Magazine, "Written by women for women." Edited by Idah McGlone Gibson

A monthly magazine containing many clever articles of decided interest to all women. Devoted to the cultivation and preservation of womanly beauty. Every number contains 8 full page portraits of beautiful women of the stage, printed in colors, together with 50 and more pages (superbly illustrated) of fashions, beauty culture, hints on the care of the hair, skin, face and hands—London and Paris correspondence—many articles of literary merit and in all, a woman's magazine from cover to cover.

This special \$2.00 subscription offer good on new or renewal subscriptions. Present Hardwood Record readers can take advantage of this offer by extending their subscription one year. Send your order today before the time limit expires; or send 10 cents (coin or stamps) for specimen copy of The Woman Beautiful.

ADDRESS ALL ORDERS TO

**HARDWOOD RECORD**  
355 Dearborn Street CHICAGO

have been refused. Prices on this class of material has materially advanced the past thirty days. Common and better chestnut is scarce sound wormy is plentiful with prices not so satisfactory as on better grades.

Poplar remains on the top list in demand and prices. Dry stocks are scarce and every indication of a small cut this season as the mills in this section have not received their usual amount of timber. Prospects for tides are not very flattering this year, as usually January and February are depended upon.

### ST. LOUIS

There is a little more activity reported in the hardwood market than there was a couple of weeks ago. Quite a number of good sized orders have been coming in from outside points and local buying is showing quite an improvement since the pleasant weather has set in. It will simply be a matter of a short time before spring business begins in earnest. Prices on all upper grade stock are being well sustained. For prompt delivery a slight advance is reported for items that are in best demand. Lower grade stock is being sought after quite freely. This is good news to the hardwood dealers in this city, as they are pretty well supplied. Gum and cottonwood are quiet, but poplar and ash are in fair demand. The items most in demand are plain white and quartered red oak. Prices on these are quite firm.

### NEW ORLEANS

The general situation as applied to hardwoods in the New Orleans market is quiet and according to many of the hardwood manufacturers and exporters somewhat unsatisfactory. European buyers are manifesting a marked lack of interest, with the result that exports are dull and comparatively little business is being done. Export shipments of staves continue somewhat active and good quantities of cross-ties are being handled. Exporters present at the recent meeting of the Gulf Coast Lumber Exporters' Association said that business was fair with them, though not as satisfactory as they would have it. However, they believed the outlook was for a little better volume of trade.

### MINNEAPOLIS

The factory consumers in the Twin Cities and neighboring places have been in the market lately to a greater extent than usual at this time of year. The demand has covered nearly everything, and shows that they are enjoying prosperity which promises well for the spring and summer seasons. Trade has included quite a movement in the low grade stocks, which have worried hardwood men for a long time. Prices are beginning to stiffen as the surplus stock fades away. It now looks as though the dry stock of cull hardwood to be carried over will not be large enough to have much effect on next season.

The upper grades continue to call for higher quotations. The mills are very stiff in their demands for the new cut, and high prices seem bound to hold on. Just now the holders of dry factory stock are in a position to ask almost anything they want to. Birch is up again and is selling readily, where there is any stock offered, on the higher price. Flooring, both birch and maple, is showing up on a higher scale. Dealers still find it difficulty to get cars, especially for straight car shipments, but this difficulty is somewhat less than a fortnight ago.

### MILWAUKEE

The bright spring weather that is prevailing over most of the state of Wisconsin is doing much to put new life into the general lumber

business. Were it not for the deplorable traffic conditions, it is believed that trade would be very satisfactory. As it is, very little is being done outside of the local trade. The railroads seem to find it impossible to get through shipments and are unable to furnish empty cars. Several Milwaukee wholesalers have been notified by northern manufacturers that they have been forced to withdraw from the market, pending an improvement in the car situation. A number of wholesalers report having had stock on the way since the latter part of November. The situation is beginning to have a serious aspect now that retailers are anxious to stock up for the spring trade that has already made its appearance.

The sash and door factories are placing good orders, but they are having their troubles in securing stocks. Furniture and wagon plants are also in the market. The fact is daily becoming more apparent that dry stocks are being depleted and a real shortage is anticipated from now on. High-grade stuff is in especially good demand. Oak is wanted; No. 1 and No. 2 birch is in demand, but the stock is scarce. Upper grade basswood is selling well. Hardwood flooring is strong.

### SAGINAW VALLEY

Both manufacturers and dealers report trade good. There is a good demand for all kinds of dry hardwood available. Maple is particularly strong and contracts have been made for many million feet to be cut during the spring and summer. Dry stocks are reported small at all manufacturing localities, while the demand appears to be expanding.

The outlook for the summer is flattering and men in position to judge predict that prices for maple, ash, birch and basswood particularly, are expected to advance in the near future. The flooring trade is calling for a lot of maple, and exports are heavy. Some plants are sending the larger portion of their cut abroad.

### DETROIT

The Detroit hardwood market shows increasing strength, inquiries and orders being more plentiful, while prices are very satisfactory. Maple and poplar still continue in great demand and cypress shows more strength, being especially strong in firsts and seconds and selects. The spring building boom, which is already well under way, has increased the demand for hardwoods of various kinds and dealers are busy.

Automobile concerns are consuming large quantities of hardwoods, thereby adding much strength to the market. The steady increase in the demand for cypress is the feature of the market. Box factories report excellent trade and are looking for a banner year.

### LONDON

There has been a fair amount of activity in the mahogany section of the trade. At two recent auction sales the attendance was good, competition active and prices firm, and the business done practically cleared up what was in the brokers' hands.

There is still not much business doing in American hardwoods although there are some indications of a change for the better. A lot of stock of recent arrivals remains on the quay unsold. Prices for prime stocks remain firm but the lower grades are weak. There is some slight movement in quartered oak boards, but plain oak in medium and cull grades is easier. There is a better demand for medium white-wood and also some call for good culls in this wood. A little inquiry for black walnut has sprung up, but stocks of this wood are sufficient to meet the demand for some time.

THE CAPACITY  
OF YOUR  
DRY KILN.**

**Woodard Furniture Company**

Owosso, Mich., July 3, 1908

Grand Rapids Veneer Works,  
Grand Rapids, Mich.

Gentlemen:

Replying to your favor of the 2nd, the dry kiln we purchased of you has given very good satisfaction and is an improvement over anything we have ever seen in the dry kiln line. You claimed so much for this kiln that we were somewhat in doubt of its doing all you said it would, but we are pleased to state that it has done all you claimed it would.

Yours truly,  
WOODARD FURNITURE COMPANY  
Per Fred B. Woodard

# A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances **without adjustment**. It has many other good features, but we've no more room to describe them.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

Manufactured only by

**Saranac Machine Co., St. Joseph, Michigan**

## The "Tower" Pony Edger

For portable and small stationary mills. Hundreds in use. Suitable for any mill having from 15 h.p. up.

Increases the output of the mill one-third. Grades the lumber. Takes out hearts, shakes and knots, and makes firsts and seconds out of commons. Saves considerable No. 1 lumber that is wasted when the edging is done on the main saw. Gives the boards straight and parallel edges, and makes them of standard or any desired widths.

Rips a wide board into two or more narrower ones, either at the same time that it edges it or afterwards, as may be preferred. Causes the lumber to sell more readily and to command a higher price.

Occupies little room. Requires only nominal power. Simple. Easy to operate. Readily moved from one set to the next. Does not get out of order.

By far the best edger made. We manufacture 72 different sizes and styles of Edgers and 10 sizes of Trimmers. We also make

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address :

If you want to reach the wholesale consumers of hardwood lumber throughout the United States, a **HARDWOOD RECORD** advertisement will do it for you.

If you want to reach the hardwood manufacturers of the United States, a **HARDWOOD RECORD** advertisement will do it for you.

The **HARDWOOD RECORD** represents high-class, special, class circulation, with a minimum of waste circulation.

Ask any **HARDWOOD RECORD** advertiser for experience on results.

**High Daily Averages** in skidding depend principally on initial capacity and the degree to which the skidder can be operated to that capacity.

### The Clyde Self-propelling Steam Skidder

is absolutely independent of loading and is never held back nor its full capacity interfered with by any loading conditions that may exist. Full capacity is therefore possible when conditions are favorable and the hauls are short thus insuring a surplus of logs to compensate for those days when conditions are unfavorable and the hauls are long.

With the independent and separate loading unit, the loading crew may then be pushed to its fullest capacity at all times assuring a uniform daily flow of logs to the mill. It is self-propelling, can move frequently without loss of time and sets quickly because of its special steam guying device.

Send for our descriptive catalogue, also testimonial booklet.

## Results Are What Count

A combined skidding and loading machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results.

The latest Russel Machine has some distinct improvements that save time, trouble and money.

The skidding sheaves are hung from a vertically hinged jib the outer end is gauged by two power tightened lines.

An all-steel machine which has special features that absorb all shocks and strains. Rapid in operation and setting. Swinging boom easily controlled by one lever. The machine is raised or lowered by hydraulic or patented geared jacks. Built for 2 or 4 lines. A machine that will interest you; because it is the fastest and strongest of the day.

In the market for round lots of Hardwood and  
Wagon Stock. Write us before selling.

**Fisher Building, CHICAGO**

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

*Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

## Hanchett Filing Room Machinery

We make filing room machinery and tools. It's our business—just as lumbering is your business, and we make good machinery and tools; we believe a little better than anyone else—and we sell them too. The majority of the larger mills for the last two years have been equipped with Hanchett Filing Room Machinery. Write us for names of the Big Mills that are equipped with Hanchett Filing Room Machinery. We have sold the biggest filing room outfits ever placed in any mill.

Want an Automatic Band or Circular Sharpener, Gang Grinder, Lap Grinder, Brazing Table, Swage, a Tension Gauge, Saw Anvil or any other tool? We make them all. Glad to send them out on approval or in competition with any other make.

Write for catalog No. 20

## RED BOOK

Published Semi-annually  
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

# Linderman Automatic Dovetail Glue Jointer

To the woodworker who weighs the cost of Jointing Lumber and the value of his finished product the LINDERMAN AUTOMATIC DOVETAIL GLUE JOINTER offers a method that eliminates the operations necessary to complete a glue joint as jointing, glueing, clamping, unclamping and edging the jointed panel to width, combining the five hand operations into One Automatic Operation with a

## WEDGE DOVETAIL JOINT

which has proven by practical tests to be stronger than a flat joint because it allows the glue to stay in the joint until the tapering wedge Dovetails draw the lumber together which forces the glue into the pores of the wood welding it with a permanent clamp.

LET US KNOW YOUR WANTS

# CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

☐ For more than thirty years the manufacturers of lumber at Cadillac have conducted business on one definite policy.

☐ In brief, that policy has embraced a source of timber supply of the best in the state of Michigan; the employment of the highest class of workmen and best machinery in the manufacture of their lumber and flooring; the exercise of exceptional care in the seasoning of stock, infinite pains in grading and painstaking attention to the requirements of every customer.

☐ The result of this policy has been Cadillac Quality and Cadillac Reputation for Satisfactory Dealing.

☐ If you are not a Cadillac partisan, it will be to your interest to get in line. Be friendly—write us.

## Michigan Hard Maple Cadillac Quality

1 x 9	1s and 2s	4M
1 x 15 and wider	1s and 2s	8M
5-4	No. 1 and 2 Common	20M
8-4	No. 1 and 2 Common	20M
4-4	No. 3 Common	100M

Order Now while we have dry stock.  
No additional stock will be dry until  
next summer.

## Ahnapee Veneer & Seating Co.

We are now in position to supply single ply veneers of native woods, from our Birchwood mill.

Twenty-two years' experience in high-grade built up work assures our familiarity with all its special requirements. We produce stock THAT IS IN SHAPE TO GLUE.

OUR ALGOMA FACTORY, for the past seventeen years, has made a specialty of high-grade glued up work only. We manufacture panels of all sizes, either flat or bent to shape in all woods. Mahogany and Quarter-Sawn Oak a specialty.

We do not make any 2-ply stock or do not use slice cut quartered oak in any of our work. Our quartered oak is all sawed

veneer. THE GLUE WE USE IS GUARANTEED HIDE STOCK.

Our long experience, has put our work beyond the experimental stage. We offer you the benefit of results accomplished through careful attention and study of every detail of the work. Our apparatus and appliances are up-to-date and built on mechanical ideas. We do not use retainers. Our gluing forms are put under powerful screws and left there until the glue has thoroughly hardened. Any one familiar with glue knows that a joint must not be disturbed until thoroughly dry.

Our prices ARE NOT the lowest, but our product is guaranteed THE BEST.

Factory and Veneer Mill: ALGOMA, WIS. Veneer and Saw Mill: BIRCHWOOD, WIS. Home Office: ALGOMA, WIS.

REMEMBER  
WE ALSO MAKE

## TWENTY IN ONE PLANT AT WORK

All trim saws **trim** and all cut-off saws **cut**, but some are not as easy to handle, as safe or convenient to operate as others. One of our **new type** trim saws requires only three square feet of floor space and may be located at the **most-saving-of-time-point** in your plant.

### The Berlin No. 238 Trim Saw

is essentially a swing saw with the swinging arc hung from below and mounted on trunnion point set screws so that all side play is quickly taken up. The swinging arm is counterbalanced by means of springs. The swing is operated **at any point** in the width of the machine by a foot treadle, and the shaft is mounted in split-boxes.

**Every cut is made with absolute accuracy** because the table being placed at an angle holds the stock so that the operator "looks it in the face."

A strong, sturdy frame holds the upper parts in perfect alignment. Vertical, as well as horizontal, adjustment is provided on the saw arbor.

These few points and a study of the picture will give you a fair idea of the uses of this **accurate cutting** machine. Would you be interested in a large picture and full description? Gladly sent on request.

# A Different Rip Saw

No. 30 Power Feed with Adjustable Feed Rolls

A Machine of Exceptional Range and Capacity

Especially Adapted for Sawing Short Stock

One piece frame. Four bearings for arbor, one of them outside driving pulley, as shown, and one a removable outside bearing at opposite end of arbor. Exceptionally positive and strong feed works. The rolls are 6 inches in diameter, and are adjustable to and from the saw, so that from 10 to 20 in. saws may be used, ripping up to 6½ in. thick. Feed roll adjustment is entirely new. The sliding head stock controlling feed is raised to any point with one motion of crank, and controlled with ratchet. Tension of feed chains is the same at all distances **without adjustment**. It has many other good features, but we've no more room to describe them.

WRITE FOR FULL DESCRIPTION

This is only one of the many superior machines we are building. If in need of anything in the woodworking machinery line, it will pay you to investigate our tools before placing an order. Catalogue sent on request.

WOODWORKING MACHINERY MERCHANTS  
CHICAGO, ILLINOIS

No. 35 SINGLE SURFACE PONY PLANNER

Planes 24 inches wide and 6 inches thick. Table slides on outside of frame so it is steady and the work will not be wavy or have clipped off ends. Two rates of feed driven from cylinder, one regulating the other.

### MOST PERFECT

## DOUBLE HEAD DOWEL MACHINE

These machines have two spindles running side by side, both spindles operated at the same time and by the same operator. Double No. 1 cuts from ¼-in. to 1-in. diameter; double No. 2 cuts up to 2-in. in diameter; double No. 3 cuts up to 3-in. in diameter. These machines are designed for the rapid production of round rods for all purposes, and have a capacity of 7,000 feet per hour and larger when required. Waste stock and every grade of stock may be turned without danger of it twisting off or clogging in the cutter head.

### CHECKING, SPLITTING, ROTTING POSITIVELY PREVENTED

by LORAC, a thick liquid, to be applied to either timber or lumber at a trifling cost. It will not discolor or injure the wood, neither will it interfere with its subsequent working or painting. It requires no preparation before use, no heating or mixing, and is easily applied by unskilled labor.

Ryan-Stimson Lumber Co., Memphis, Tenn., writes us July 21, 1909: "The Lorac Protector we received seems to be doing pretty well. Please ship us at once another barrel of 600 lbs."

The Florence Pump and Lumber Co., Memphis, Tenn., writes July 6, 1909: "The Lorac Protector we recently had from you was all that could be asked for, and works splendidly, preventing the ends of squares from checking. Send us two barrels of 600 lbs. each."

Dec. 18, 1909: "Please send us two barrels of Lorac, about 600 lbs. each."

L. A. Schwarzwaelder, Chichester, N. Y., Manufacturer of Bank and Office Fixtures, writes us under date of Aug. 9, '09: "I have given your material a trial on some lumber, and find it has fulfilled all that you claim for it. Please ship me a barrel of 600 lbs. at your earliest convenience."

Herr Lange, Chief Forester, The Bismarck Forestry, Friedrichsruh, Germany, writes: "As your Lorac Protector has shown excellent results on Beechwood, we request that you send us immediately additional 500 lbs. of the same."

You need not pay for it if it does not do all we say. What better guarantee can we offer?

### Coming Association Meetings

#### NATIONAL LUMBER MANUFACTURERS' ASS'N.

The Board of Governors of the above association have fixed the dates for the 1910 annual meeting for April 19 and 20 at New Orleans, La.

GEORGE K. SMITH,  
Secretary.

EDWARD HINES,  
President.

#### MICHIGAN HARDWOOD MANUFACTURERS' ASSOCIATION.

The spring meeting of this organization will be held at the Ponchartrain Hotel, Detroit, on Thursday, May 5.

J. C. KNOX, Secretary C. A. BIGELOW, President.

#### NATIONAL HARDWOOD LUMBER ASSOCIATION.

The next annual meeting of this organization will be held at the Seelbach Hotel, Louisville, Ky., Thursday and Friday, June 9 and 10, 1910.

F. F. FISH, Secretary. O. O. AGLER, President.

### General Market Conditions

In the aggregate the hardwood trade the country over is from fair to good. There is an absolute paucity of firsts and seconds of nearly all varieties of hardwoods, and No. 1 Common is fast approaching the same situation. There is still a small surplus of No. 2 and No. 3, but buyers are taking on these coarser grades in default of their ability to get better lumber.

While there is a good deal of hardwood being made at the present time, there is no prospect of enough being produced to warrant an assumption that there will be such an overstock as to cause a break in prices.

The advancing values of stumpage and increased manufacturing cost are resulting in a smaller percentage of profit in hardwood manufacture today than ever before in the history of the trade, and

the average man is not keen to plunge in the way of a large output.

The export trade is in the "dumps," and stocks on the other side of the water are gradually diminishing. The foreign buyer contends that prices are too high. This simply means that he has been educated on a low plane of values and is now not willing to pay a just and legitimate price for actual value.

The veneer and panel people are all busy, but are getting a very low scale of values for their product, which must be materially increased before there will be much profit in veneer and panel making.

The hardwood flooring factories are fairly busy, and are working on a basis which brings a reasonable profit on their business. This result has come about by co-operation between manufacturers and a thorough analysis of lumber and manufacturing cost.

The door and interior trim people are moderately active, and current prices are showing them a fair profit on transactions.

Every hardwood manufacturing region is being visited by hordes of buyers seeking high-class stock. Manufacturers generally are optimistic on the future of values and are not willing to make any concessions in prices to effect sales. More money is being spent today in buying lumber than there is in selling it.

The outlook for future good prices and a steady trade is excellent.

### The Gibson Tally Book

The Gibson Tally Book, recently put on the market by HARDWOOD RECORD, is meeting with the approval of hardwood manufacturers, jobbers and the wholesale consumers of hardwoods, as is evidenced by the numerous orders received. The advertisement of this unique device will be found on page 49 of this issue, to which attention is particularly directed.

The making of three original tally tickets for every car of lumber shipped or received seems to appeal to the average man interested in hardwoods. In the case of manufacturers, it enables the inspector to retain one of the tickets, and deliver two to the sales office, one to be held for record and the other to be attached to the invoice. The majority of complaints incident to shortage in lumber are directly traceable to mistakes in tally extensions, and the use of the Gibson Tally Book minimizes the possibility of these errors, and enables all parties in interest to readily locate them. Again, their use prevents the unscrupulous from raising measurements. When every buyer insists upon having the original tally attached to his invoice it will be a long step toward commercial integrity in lumber affairs.

The tally ticket covers are light and portable, and can readily be carried in the outer or inside coat pocket. The triplicate tickets have no loose carbons to blow about in the wind, as the backs are carboned.

Aside from the small profit involved in the manufacture of these tickets, the RECORD is much interested in seeing them universally adopted by lumber manufacturers, merchants and those who buy lumber in carload lots, as they make for uniformity and system in lumber measurement.

### Chief Furniture Manufacturing Center

William E. Curtis, the famous traveler, statistician and voluminous writer on a myriad of subjects, occasionally has palmed off on him sundry alleged "facts and figures" that actual facts will not warrant. In the Chicago Record-Herald of April 3, Mr. Curtis states

that there are forty-three furniture factories in Grand Rapids, Mich., employing 15,000 skilled workmen, producing more furniture than any other city in the world.

As a matter of fact, there are more than one hundred furniture factories in Chicago which employ more than 50,000 operators, and make approximately \$30,000,000 worth of furniture annually, as against an annual production in Grand Rapids of a little more than \$7,000,000. Chicago is the chief furniture manufacturing city in the world; Grand Rapids stands second in the list, and is a good deal of a furniture-producing center at that.

## English Hardwood Market for 1909

In spite of the revival of trade during the past few months, last year will be remembered as very disappointing to hardwood interests. Conditions in the general building trades have improved but little, and the same can be said of cabinet industries. The builders of ships and rolling-stock have done a limited and slow business during the year.

Particularly noticeable in the mahogany business was the limited import trade, which is considered to be the lightest in the last twelve years. This condition may be attributed to several reasons, chief of which, perhaps, is the fact that but poor prices were realized for shipments in the previous year. Also the increase in American demand, together with the insufficient water in many districts of manufacture, which resulted in the holding up of many logs, are responsible to a smaller degree. It resulted, therefore, that the demand exceeded the supply.

The beginning of the year showed fairly firm prices, which were maintained without any very evident increase until fall, when the limitation of the supply caused a gradual but steady advance of prices in general. This continued up to the end of the year, when prices were listed at fully 20 per cent higher than the same period the year before. The supply of Honduras mahogany showed a marked decrease over the production of the previous year, the import being reported as the smallest on record since 1903. What material came in was not only of poor quality, but was overstocked with small and crooked logs, which, while readily adapted to the manufacture of cabinets, chairs and other furniture, will only find a sufficient market when the rates are low enough to compete with other varieties.

On the contrary, the importation of Mexican wood was about double that of 1908. The demand for logs of good quality was unfluctuating. Shipments on the whole, however, were rather below the average as to grade. They were also below the usual size and were poorly hewn.

There was one specially heavy shipment of Nicaraguan logs, at London, which consisted of 2,815 round sticks. In keeping with the other shipments, these logs were of poor growth, were usually unshapely and crooked, and often badly split. The best of this shipment was easily disposed of, but the poorer logs were still in the hands of the brokers at the end of the year.

The first shipments of Panama logs from the West Coast, in the

last four years, were recently received in London. While of rather unsound condition, these logs sold at a good figure.

Two consignments of squared Columbian mahogany logs were imported during the year. Owing to the badly weathered condition in which they were received, only moderate prices were realized. The second shipment, especially, contained logs of excellent dimensions, and in good condition aside from the weathering referred to.

The importation of Costa Rican wood showed practically no variations from that of the previous year. The logs were about the same as to condition and manufacture, but were rather smaller in size than the usual shipments. There was no trouble in disposing of the stock.

The greatly increased American demand for Cuban mahogany resulted in a large decrease in the Liverpool and London importations, the total figure being about one-third of that for 1908. The beginning of the year showed a heavy stock on hand, which, together with two cargoes arriving in the spring and autumn, have supplied the market throughout the year. The market has been fairly steady,

though there was a slight weakening the beginning of summer. This was soon reversed, however, the steady advance continuing up to the end of the year. The consumption of Cuban wood has been unusually steady, there being a considerable increase in delivery over that of the last three years.

The year shows a large decrease in the supply of African mahogany, there being only about one-third as many logs received as in 1908. The wood was generally of indifferent character, a large percentage being small, crooked, or unsound and weathered logs.

The demand for American walnut logs has been uninterrupted during the entire year. The supply, however, has been entirely inadequate, and the small shipments which arrived were usually of inferior quality. The import of lumber has, however, been fair as to quantity, but the waning interest in this wood has already been productive of a decreased demand, and hence production. Medium grades found the strongest market, though the

trade in general was steady, and prices firm and unfluctuating, except for culls.

The demand for American quartered oak, in boards and in thick stock, has been fairly good, though somewhat checked by the increase in shippers' quotations. The supply was never excessive, and therefore the prices were maintained without any considerable fluctuation. Owing to the increased price of quartered oak as well as to the increased call from cabinet manufacturers, the demand for plain oak, both red and white, has showed a decided increase. In spite of the large consumption, however, there was an overabundance of low-grade stock at times, with consequent unsteadiness of prices. The upper grades, however, were never quite equal in quantity to the demand, and prices were always steady in that line.

## The Financial Situation

The most singular phase of the financial situation in New York is that although the banks are loaned up, loans exceed deposits, and Wall Street has commenced to send gold abroad, interest rates remain

TO AVOID  
UNKIND  
CRITICISM:  
Say Nothing,  
Be Nothing,  
Do Nothing

—Fra Elbertus

low. There has been this discrepancy between the obvious condition of the money market and the rates of interest for many weeks. It now becomes more manifest. There is one explanation of this situation which the public does not like to consider: that the demands for money for current business are lessening. That would indicate, if it were true, a halting state of general business. If trade is going to slow up, high money will be avoided, but Wall Street would rather pay more for money and know that the tide of business is rising.

The demands for gold for export shipment during the last week have been considerable. This gold is being sent abroad because the country owes it. If it did not owe it, it would not be required to send it at all. It's a choice between paying debts in gold or commodities. Right now American commodities are so high that the foreign trade will not buy them. There is no mystery about this fact, and even lumber, relatively the lowest priced American export commodity, is regarded in Liverpool and Hamburg as too high priced.

## A New Name for Red Gum

That exquisitely illustrated and beautifully printed magazine, "Furniture," published by the Furniture Record Company of Grand Rapids, Mich., in its April number suggests that a name for red gum, other than satin walnut, kyonyx or hazel pine (by which the sapwood is sometimes known), would be a distinct advance in the nomenclature of this magnificent wood. "Furniture" suggests that there could be no better name applied to it than liquidambar. Red gum is of the family *Hamamelidaceae*, the same family to which the witch-hazel belongs. The generic name of red gum is liquidambar, and the name of the species is *styraciflua*. As the name of the species would be hard to memorize, it strikes the RECORD that the generic name liquidambar would be a highly appropriate one by which to identify this wood commercially. As a matter of fact, many woods in common use in this country might better be known by their botanical names. This is especially true of the oaks.

Referring specifically to this wood, "Furniture" says:

For a good while "red gum," as it is commonly called, was regarded as entirely useless for furniture. It was a handsome wood, too—workable, strong, durable, taking a fine finish, and, withal, inexpensive, as compared with the other hardwoods. But it seemed practically impossible to season it so that it would retain even a semblance of its original shape after it had reached the cabinet maker. The resinous sap with which it was filled acted so peculiarly when the green wood was placed in the dry kiln that however long the wood was permitted to season there, the moisture was never completely dried out. Perhaps the sap seared over a certain depth beneath the surface and rendered air-tight the pores of the wood, so that the sap within could not be driven out by the heat of the kiln. At any rate, in its early history, as a cabinet wood, the red gum was a terror to the manufacturer. By and by, however, the difficulties of seasoning were overcome, and gradually the red gum grew in favor. Its early history was against it, however, and the wood had to masquerade under other names. Our British cousins renamed it "satin walnut," and our own cabinet-workers have used it as "imitation mahogany," "imitation walnut," and in other ways without even giving it a name.

At last, however, the wood is coming to its own. Some manufacturers, making high grade furniture, have utilized the wood without disguise. It is beautiful material. It is durable. It takes a rarely handsome finish. Finished to simulate mahogany, many an expert has been deceived, and pronounced it real mahogany. As an understudy for the expensive Circassian walnut it can hardly be distinguished from the original, and finished dull, either dark or light, in *propria persona*, it reveals a rarely beautiful wood. But "red gum" is not the proper name for it. Its botanical title is "liquidambar," and by that name it should, hereafter, be generally known. "Liquidambar" should take its place with mahogany, oak, maple, walnut and the other furniture woods.

The RECORD desires to heartily second the observations of its contemporary on the subject of red gum and its high value for furniture purposes. It is true that today manufacturers have learned how to produce air-dried and kiln-dried red gum so that it will hold its shape and stand up in finished work as well as oak or birch. Some recent examples from the leading manufacturers of case goods and chairs made from this material vie with Circassian walnut in beauty. As a matter of fact, a good deal of figured red gum is now going into use as Circassian walnut, and in many instances it is fully as beautiful. Surely red gum is coming to be highly appreciated and

if by adopting the botanical name of liquidambar it will help to further public appreciation for this wood, by liquidambar let it be known.

## Foreign Demand for Dimension

A lumber exporter visited Chicago a few days ago and incidentally made inquiry for two-inch short maple, stating that he was willing to buy as short as seven and a half inches, for delivery in France.

A recent caller at the RECORD office was a prominent lumber merchant of Quebec. He was also looking for small maple squares for export.

It is not generally known that in Great Britain and on the continent of Europe there is in the aggregate an immense demand for small hardwood dimension of nearly all varieties of wood. In these countries they are not as extravagant users of wood as in this country. There the best material for the purpose is employed, and if wood happens to be this material, it is used, but if steel, iron, copper, cement or some other material is better for the purpose it is employed. The result is that European countries do not consume one-fifteenth the quantity of wood per capita that is used in the United States, but what they do use they demand shall be of the best. They have learned across the sea that they can secure dimension stock in certain quantities in this country that is clear lumber, and they can save a good deal by purchasing it when waste and carrying charges for boards and planks are taken into consideration.

It is perfectly logical to develop a big export trade in dimension stock if the wants of the various markets is seriously studied. It is therefore suggested to both the lumber exporting clients of the RECORD and its various "wood goods" subscribers abroad as well, that if they seek a source of supply of dimension stock and will place a list of their prospective requirements in the hands of the RECORD, information covering logical sources of supply will be furnished.

Right now the high cost of stumpage is putting every lumber manufacturer on the alert to secure the most wood from every tree, and the majority of manufacturers are interested in securing a list of specific sizes of various kinds of woods that can be utilized for an infinity of purposes. Many manufacturers up to this time have gone into the dimension business in a very unintelligent way. They have made sizes that the trade did not demand, and sizes they have made have not been accurately manufactured, well seasoned or well cared for, with the result that they have lost money on the venture.

If buyers will supply specifications of required sizes and quantities of any kind of American wood they can secure it. The information the American lumber manufacturer wants is specifications of standard sizes that will be generally marketable at all times. With this information at hand he can deliver the goods at satisfactory prices.

## Editorial Notes

An understanding has been reached between the United States and Canadian governments on the subject of tariff regulations. Minor concessions have been made on both sides, and the current schedule, so far as forest products go, will be continued for an indefinite period.

The car shortage is easing up materially in the North, and at most of the Mississippi river points, but is becoming quite serious in the southern lumber manufacturing regions. It now seems probable that before midsummer the situation will be just as bad as during the spring of 1907. It is said that the railroads have not kept their equipment up to correspond with the natural growth of business, and the present and prospective activity in lumber movement is leaving them unprepared to handle the excess of tonnage now offered.

## Pert, Pertinent and Impertinent

### To Promote Happiness

If sunbeams daily rang the bell  
And stopped it with a low,  
If tender broilers came as well  
And said, "Please serve us now,"  
If every day were Christmas day,  
If taxicabs were free,  
If work should masquerade as play,  
How happy we should be!

If sunbeams came to make a cake,  
If storm winds played a tune,  
If babies ne'er had stomach ache  
Nor cried about the moon;  
If greenbacks grew on maple trees  
In every garden plot,  
If gold coin came from honey bees,  
We'd be a joyous lot.

If places where we have to work  
With fruits and mandolins  
Were gladdened so we couldn't shirk,  
How wide would be our grins!  
If we could sit around and smoke  
And still draw double pay  
And never, never more be broke,  
We surely would be gay!

## Fact vs. Legend

Uncle Sam: I thought you lived over yonder, but I find you don't.  
Instead you are a hard working person.

### The Little Ad

I'm just a little group of type  
Set up to fill blank space,  
My Master thinks I surely will  
Bring business to his place.

Maybe, perhaps, he doesn't know  
That type is almost human;  
With feet, a body, shoulders, face  
Like any other true man.

And so, if he would reap results,  
He'll watch me with great care;  
Give me good clothes, wash my face,  
And help my speech prepare.

If he'll do this, I'll warrant you  
I'll do my level best.  
He must, of course, put me where  
I'm seen like all the rest.

I should be put where buyers' eyes  
Will surely see me ever;  
Then I'll bet he'll praise my work,  
And kick about me never.

—J. W.

### The Three Meanest Words

Speaking of words by tongue or pen.  
The meanest are "Busy—call again."  
—W. H. Y.

### Sympathy

The bond of sympathy is made of any tether.  
Some laugh, some sigh, some even yawn together.  
—LIFE.

### A Double Duty

The hook where hangs my shaving strap  
Now has a double care,  
For wife finds it useful now  
To braid her phony hair.

Politeness to superiors is sycophancy; to peers,  
superfluity; to inferiors, nobility.

Too many people regard honesty as a policy  
rather than a principle.

# AMERICAN FOREST TREES

## EIGHTY-FIFTH PAPER

### Laurel Oak

*Quercus laurifolia* Michx.

This representative of the red oak group is found only in the territory along the southeastern borders of the United States. Growing as it does in moist, watery places it is usually accompanied by gums, bays, other red oaks, white cedar, ash and sour wood. In some of the states of its range laurel oak has attained popularity as a shade tree and is known locally as water oak.

Beginning at the border of the Dismal Swamp in Virginia as the northern limit of growth, this interesting tree ranges southward along the coast to Cape Romona, in Florida, and westward in the lower Gulf states in southeastern Louisiana. Eastern Florida is the region of its most abundant growth and greatest size.

Although the common name laurel oak is prompted by its foliage, the tree bears various other sectional names. It is known as laurel oak in North Carolina, South Carolina, Alabama and Florida; swamp laurel oak in Tennessee; Darlington oak in South Carolina; willow oak in Florida and South Carolina; water oak in Georgia.

The ornamental value of this tree is due to the tall, stately bole, its shapely and symmetrical round-topped head, and slender branches and twigs. It sometimes attains the dignity of one hundred feet in height with a proportionate diameter of three or four feet. The bark is tight fitting and firm, of dark, reddish-brown color and usually is not fissured, but finely broken into small, close, scale-like plates. On old trees, especially at the butt, deep fissures divide it into broad ridges. The buds are shiny brown and narrow abruptly to an acute point. The acorns are either sessile or have but a short stalk, and usually grow alone. They are short and broad and are incased in shallow, thin cups. In the flowering season hairy aments of male flowers add to the attractiveness of the tree. Its female flowers are on stubby smooth peduncles. Of interest are the paddle-shaped leaves with their smooth, entire, thickened margins and their lustrous leathery texture. They are dark green above and lighter on the lower surface, and are grouped rather closely on the twigs. They attain as great a length as four inches and fall gradually after turning.

While laurel oak grows to rather large size and is found over a fairly extensive range of territory, it is not an important timber tree, its wood being of inferior physical qualities compared with the other red oaks. It is dark reddish-brown in color and is a thick sapped wood; is coarse in grain, strong and hard and weighs about forty-eight pounds per dry cubic foot. When used as lumber unusual care must be exercised to prevent bad checking. While of late it has

been used some for interior work, its chief value is as fuel and for making charcoal.

The accompanying illustration shows typical laurel oak growth in the lowlands of North Carolina.

FOREST GROWTH LAUREL OAK, NORTH CAROLINA

Growing as it does in a watery region, the use of laurel oak for boat construction seems very natural. And yet this tree has never been put to such a purpose, oaks of superior quality, more easy of access, shouldering it out of use. Of a closely allied species, however, were those trees growing on the Federal reserve set aside in Florida a century ago by the United States government to in-

sure a perpetual supply of timber for the construction of the picturesque old ships of war, that the government officials at that time were short-sighted enough to think would always be our only means of naval defense.

While the oak is still of preëminent importance to shipbuilding, as in all other lines of manufacture, it does not now occupy the intimate relation which it once enjoyed, to the construction of the framework and essential parts, except in small craft. The old belief in the indispensable qualities of this wood for knees, ribs, keels and similar parts, has long since received a severe jolt in the substitution of modern steel construction.

That the oak has always held an almost sacred place in this connection is evidenced by the old records of the Greeks, Romans, Teutons and Celts. Not only did the tree yield them food and material for shelter, but the hearts of fine old specimens were hewn into great timbers that formed such ships of war for the hardy Norsemen as no storms or battles could wrench apart. As in the construction of ships, so in bridge building, in houses and aqueducts in later times, oak has always reigned supreme. These beauty-loving people not only used this tough, lasting wood for construction purposes, but got their architectural inspirations from the foliage and graceful limbs.

In short, so great was their reverence for this king of trees that it was ultimately looked upon as being sacred, a feeling that is still evident in the more modern writings of the latter-day poets, who, while expressing their feelings in a more modified way, still make it evident that the oak retains its powers of inspiration even in this prosaic age.

### An Opening for Philippine Mahogany

That the mahogany trade is to follow the same course as that of the various other valuable and semi-precious woods of commerce is an evident fact, judging from the reports emanating from authoritative sources in the world's markets. There has been an almost uninterrupted increase in demand, and with it a commensurate advance in prices and in willingness to accept logs which formerly would not have been even considered, and to pay a good price for them. At recent English mahogany values small crooked stock was eagerly snapped up, as were also curly ended logs hitherto of small value.

The American interests who have recently acquired vast areas of virgin mahogany in the Philippines must view the new condition of things with considerable complacency. The Philippine wood has a unique figure of its own, being marked with even, longitudinal streaks of alternating shades, a figure which would seem to suit it rather for trim than for general cabinet work. The texture is good and the weight almost equal to that of oak.

It will be interesting to see just how far this wood, when marketed in this country, will fill the popular demand for a high-grade finishing wood at a reasonable price.

# Builders of Lumber History

NUMBER XCI

Leon Isaacsen

(See portrait supplement.)

For some months past, *HARDWOOD RECORD* has been running a series of articles illustrating the woods operations of the most notable yellow poplar manufacturing house in the United States, the Yellow Poplar Lumber Company of Coal Grove, O. In these stories little has been said about the presiding genius of this noteworthy logging and lumber enterprise. Those who have perused these articles cannot fail to have been impressed with the monumental engineering difficulties that have been successfully overcome in the accomplishment of delivering from remote mountain fastnesses to the company's sawmilling headquarters at Coal Grove, O., a crop of forty million feet of timber of one variety cut from forest areas of mixed growth.

The region from which the company obtained this timber is remote from railroad transportation, and between floating water in the Big Sandy River and the timber property itself was a five-mile, rock-strewn, gorge of the river which had proven disastrous for log-running purposes in all previous lumber history.

The man who is definitely responsible for mastering the great work of getting timber out of this region is Leon Isaacsen, vice-president and active woods manager of the Yellow Poplar Lumber Company. Mr. Isaacsen's work, as has been described in these columns, marks him as foremost in this line of endeavor, and therefore it is with a good deal of satisfaction that the *RECORD* reproduces his counterfeit presentment as its supplement for this issue.

The company of which Mr. Isaacsen is the head is a specialist in yellow poplar. While owning many thousands of acres of mountain lands, which carry poplar, oak, chestnut and a variety of other woods indigenous to these regions, this company has preferred to remain strictly poplar producers. In a way it has indulged in forest conservation. While it has taken the poplar off thousands of acres of land the remaining forest has been left in such shape that the concern has been able to market the property thus deforested of poplar at prices often in excess of the original cost, with improvements included.

Leon Isaacsen was born in Copenhagen, Denmark, and originally came to this country as a buyer of export stock for Shadbolt & Co. of London. After spending a year at Atlantic seaports as buyer for this house, he became convinced that this method of securing stock was not the most desirable one and went into the mountain regions where high class poplar and oak abounded and entered upon manufacture of lumber by means of a number of small mills. He

continued to act on behalf of the London house. In this way he became familiar with the many problems incident to getting logs out of the Appalachian country. This experience ripened until now he is recognized as an authority on the best methods of getting timber out of the mountains.

Mr. Isaacsen became identified with the Yellow Poplar Lumber Company in 1891. He is an extremely modest man and is not well known to the generality of the trade. He has always concealed his identity, as has also C. M. Crawford, secretary and treasurer of the company, in charge of the manufacturing and sales end of the business, behind the company name. Neither gentleman has ever sought publicity or preferment, but have simply devoted their lives to the great work they had in hand. The standing of the Yellow Poplar Lumber Company today is conclusive evidence of what hard, unceasing work and intelligent endeavor will accomplish.

Mr. Isaacsen is an unostentatious man. He holds that there are no secrets in logging operations or lumber production. Every scintilla of knowledge that he possesses concerning the details of woods work is at the disposal of his contemporaries as an open book. He talks with extreme modesty and diffidence about his accomplishments, but does so without restraint. If there are any secrets in the details of his business, he does not seem to know what they are.

To the student of human nature Mr. Isaacsen is a most interesting study. Those who come in contact with him soon realize that "he knows every foot of the way." He studies a timber proposition carefully; he is a strenuous worker; he knows every creek and cove as well as the general lay of the land on the big holdings of the company which he operates.

On an average he takes the poplar timber from about twenty thousand acres each year. He makes the acquaintance of every party in interest. Personally, he buys the right of way to cross the mountaineer's farms; arranges for the housing, provisioning, general equipment and feeding of the army of men he employs in getting out this timber. He lays out every tram-road; buys every piece of machinery, and works out every problem in detail connected with the great enterprise. His spirit of forcefulness, some portion of his vast knowledge of lumbering, he somehow instills into his entire force of assistants. He is beloved by his crews and, without regard to the high salaries he pays them, to a man they will go through the most strenuous endeavor to assist him in carrying out his plans, and make the monumental accomplishments he outlines possible. Mr.

Isaacsen is essentially a just man, and it is an axiom in the mountain country that "if Isaacsen says it's right, it's right."

After Mr. Isaacsen makes an analysis of a business proposition and figures the cost, if his decision is favorable to it, the matter of expense never frightens him. The investment of well towards fifty thousand dollars in the splash dam, which he built last year above the breaks of the Big Sandy, and which, say what you please, had conjectural possibilities, did not make him in the least nervous. He believed he knew his ground; he backed his judgment with his money. In this judgment he was heartily supported by Mr. Crawford and other stockholders of the Yellow Poplar Lumber Company, who believed in the man as he believed in himself. The success of his work is now a matter of history, and simply adds new laurels to the career of one of the most successful business men connected with the lumber industry in this country.

The "team work" of the Yellow Poplar Lumber Company is worthy of comment. Mr. Isaacsen is held and holds himself responsible for log supplies. When he gets the season's crop of the company delivered into floating water below Elkhorn City, Mr. Crawford becomes the "boss" of the job. Mr. Crawford never even suggests means or methods concerning the timber in the woods or the way in which it shall be delivered in the form of logs. On the other hand, Mr. Isaacsen never suggests to Mr. Crawford methods of manufacture, re-manufacture or selling the product. They believe in each other and work in absolute harmony.

Both these gentlemen have remarkably simple tastes and habits. Enthusiasm and forcefulness are their marked characteristics. They are both students of lumber affairs and can see well into the future. They hold their trade to yellow poplar closely, having an axiom "to take care of every customer." Their stocks of lumber are always well balanced, and year after year almost the same customers are on their books. These buyers know that they can depend on the Yellow Poplar Lumber Company for their wants, and that they will invariably get a good grade and a square deal. It is a great reputation that these two men have, and this perhaps is one of the strongest features that has made for the success of the big enterprise of which they are the managerial geniuses.

While Mr. Isaacsen is a ceaseless worker he takes some time away from business for home pleasures. He resides at Brooklyn, N. Y., and repairs there at frequent intervals to rest and keep in touch with his family and general affairs outside of the lumber business.

**LEON ISAACSEN**  
COAL GROVE, OHIO

# Utilization of Hardwoods

ARTICLE XXXVIII  
SPORTING GOODS

The manufacture of bats, golf sticks, Indian clubs, dumb-bells and similar articles used in the athletic world, furnishes a source of consumption for a considerable amount of lumber each year, and as most of the concerns involved have no timber holdings of their own, it is an item of no small importance to a certain class of hardwood producers.

Perhaps no other line of manufacture demands such a strictly high-grade quality of stuff. The unusual requirements of this class of article, as to durability and strength as well as to elasticity, toughness, and absolute clearness of material used, necessitate a most rigid inspection of shipments. Material which passes muster is consequently of greater value than the ordinary run of lumber, and the houses turning out products of this sort are usually willing to pay well for suitable stock.

The standard inspection rules are not recognized by the athletic goods houses, who insist upon absolutely clear, straight stock; that a stick is sound is not sufficient to enable it to pass the individual inspection to which each car-load is subjected. As a consequence many lumbermen who have been accustomed to selling under National or Manufacturers' inspection, are disappointed in having shipments, which would usually be considered excellent stock, rejected on account of sound knots or similar imperfections. In the manufacture of bats only is lumber of this type accepted, and then only to a limited extent and when the imperfections occur near enough to the end to allow of trimming, when the piece goes into the second grade and is made into cheaper bats.

Sapwood is used entirely in bat manufacture and in all similar lines. Clear-second-growth ash, as a consequence, is greatly preferred to old trees. The obvious reason for this is that there the sap greatly predominates over heartwood, and also that young growth possesses superior toughness and elasticity. As the manufacturers have facilities for properly caring for stock during seasoning, they prefer having shipments sent directly after cutting. All material is cut to dimension before delivery, the standard bat stick being 38 inches long by 2¾ inches square at one end and 2¼ inches at the other. The second-class sticks are 32 inches long and 2¼ inches square, without taper.

The majority of ash for bats comes from the forests of Ohio, and to a more limited extent from Tennessee. On receipt at destination, the sticks are piled regularly with plenty of air space for circulation, and are given one year seasoning in the open before being used. A sufficient quantity must be kept on hand continually to insure a steady run. After proper seasoning—the wood must

be in an absolutely dry condition—the bats are turned out in a regular lathe to standard pattern. Models named after certain baseball celebrities have attained wide popularity.

The so-called willow bats also provide a considerable market for hardwood, although to a more limited extent than the other type. In reality these bats are made from basswood, most of which comes from Ohio. This also is cut to dimension before shipment, and is selected for absolute clearness and straightness, and is shipped green. The rough sticks are a little longer and larger than the ash sticks, being 40 inches in length before dressing. A few months of good weather suffices to thoroughly season them, after which they are turned in the regular way.

Maple is used entirely in the manufacture of standard Indian clubs and the northern forests are the principal source of supply. As in the other cases, clear stock is insisted upon and is sawed in standard manufacturers' lengths (even feet), in square sticks 2½ to 5 inches thick, and shipped green to the factory, where it is seasoned for a year. In this line of manufacture there is considerable waste both in turning and in trimming. The short ends are utilized when of sufficient size for the manufacture of dumb-bells. The lathes used in Indian club manufacture differ in no essential from standard types.

In the manufacture of golf-stick shafts above all other lines, perfection of stock is pre-eminently essential, the reason being too obvious to dwell upon. Clean second-growth hickory sap is the only material considered, and is shipped in carload lots without previous seasoning, each stick being cut to dimensions of 1 inch square by 4 feet long. Of particular importance is it that this stock be shipped as quickly as possible from the woods to the consumer, as hickory is especially susceptible to worm injury and the manufacturers of golf sticks have proper means of guarding against the ravages of this insect.

After a preliminary seasoning of about a year, in the square, the sticks are rounded off without taper, and are stored in kilns for three months' redrying. Here they are stacked in layers of five, with numerous cross sticks between the tiers to prevent warping, and are weighted on the top with six to seven pounds per superficial foot. When removed from the kiln the rounds are turned to pattern in a Chapman automatic lathe, which provides a maximum of output and efficiency, with a minimum of labor and time. The sticks are fed automatically, being piled six or eight deep in a rack, and feeding from the bottom. No centers or hand-operated cross heads are required in

this type of machine. After shaping, a simple lathe is used to turn the small end for receiving the iron collar.

The usual finish for bats and Indian clubs is shellac over an ordinary filler. In the case of golf-stick shafts various finishes are used to satisfy different tastes, varnish being usually required.

HARDWOOD RECORD is especially indebted to the A. G. Spaulding Manufacturing Company of Chicago, large producers of this class of goods, for information furnished in connection with this article.

## The Wood Carving Industry in Switzerland

The following discussion of wood carving in Switzerland and its gradual decline was taken from the report of Consul-General R. E. Mansfield of Zurich in the *Daily Consular and Trade Reports*:

"Wood carving, for centuries an important national industry in Switzerland, has suffered a crisis during the past year which threatens to affect the business permanently, following upon practically a monopoly and a long period of prosperity. These carvings have been especially popular with tourists, hundreds of thousands of whom visit Switzerland every year, and a large export business has been established with other countries, including the United States. This is especially true as to church emblems and articles representing historic scenes and events.

"An important Swiss wood-carving center is at Einsiedeln, a historic village in the mountains in the canton of Schwyz, where there is a celebrated pilgrimage, a wealthy Benedictine monastery and a splendid church. The industry centers in the Bernese Oberland, where wood carving is the chief occupation. The church emblems of Einsiedeln, the bears of Berne, the lion of Lucerne, the St. Bernard dogs, cows, and the quaint Swiss chalets are all reproduced in wood and sold at the curio shops. These objects have found their way into practically all continental towns, and Swiss wood carvings are almost as well known in other European countries as at home.

"Various circumstances have contributed to the present crisis, among which is the increased cost of raw material, much of which is imported, making it necessary to advance selling prices without increasing real values. This has invited competition from other countries, especially Austria and Germany. Furthermore, Austria recently placed a heavy import duty on souvenirs, under which wood carvings are classified, and in France they must be stamped 'imported,' which, it is alleged, has affected the sale to such an extent that the imports from Switzerland have been greatly reduced.

"The passing of the Swiss wood-carving industry is further evidence that industrial progress is gradually eliminating from the commercial world rural industries built up and maintained where wages are small and the expense of living low. Modern machinery and methods, increasing competition and the inexorable laws of trade are driving out primitive concerns, or forcing them into combinations. This is cause for regret, as many of the people living in the Bernese Oberland have for generations depended upon wood carving for maintenance. They have acquired great skill in this, and, being slow to accept innovations, it will be difficult for them to adopt new methods."

Manufacturers of tight cooperage will be interested in the extensive experiments now being conducted at Zurich with a view to substituting aluminum for wood in the manufacture of beer kegs. One Zurich firm is said to have placed a large order for this new article. Detailed information of this, which promises to be at least an interesting departure, is not at hand.

# Annual Chicago Hardwood Lumber Exchange

The Hardwood Exchange held its fourth annual, at the Hotel La Salle, on Saturday, March 26. Owing to a misunderstanding on the part of the management of the hotel, the College room, in which the luncheon and meeting usually take place, was assigned to the Woodmen of America, the similarity in names probably being responsible. In fact each meeting was frequently interrupted by visitors from the other organization, who had been misdirected by the hotel attendants who had gotten the names confused.

Following the usual pleasant luncheon, the meeting was brought to order at about 1:30 by President Brown, who in a brief speech reviewed the business and happenings of the

annual reports. The first to respond was Chairman J. L. Lane of the Entertainment Committee, which consisted, besides himself, of Clarence Wolfe and C. L. Cross. He had no written report, but in a humorous way told of the various functions which his committee had put over during the year. He reported a decided increase in appetite without any evidence of dyspepsia. The only kicks reported were from J. S. Trainer, who objected to the fact that ladies were not admitted to the luncheon, and from W. C. Schreiber, who is greatly in favor of having two portions of soup served to each person instead of the usual single order. Mr. Lane recommended a continuance of the usual entertainments.

of work along the lines suggested at that time, which still awaits development in the future.

What the committee has to report at this time, therefore, is an outline of what it may be able to do under certain conditions, rather than the submission of a record of the specific accomplishment of any part of the work which was assigned to it.

The relationship of this exchange to other associations is a question in which we are all very deeply interested, and one to which I have given considerable thought. Under existing economical conditions the individual has ceased to be regarded as the efficient unit in the financial, commercial or industrial field of effort. He has been supplanted by combinations of many individuals possessing a common interest along given lines. The individual has lost his potency for self-protection, for the accomplishment of reforms, or for making his influence felt in any extended field of effort. Combination is the universal order of the day. It perhaps bespeaks the progressive spirit that has always been one of the characteristic features of Chicago's commercial life, that the hardwood lumbermen of this city were among the first in the trade to recognize and accept these changed conditions.

F. L. BROWN, PRESIDENT

W. C. SCHREIBER, VICE-PRESIDENT

F. B. McMULLEN, SECRETARY

past year. He stated that the administration, at the beginning of the year, adopted the policy of merely supervising and outlining the work, the details of which were taken care of by the seven committees created for specific purposes. These committees were warmly commended by him for the faithful and efficient manner in which they had carried out his suggestions, and were given full credit for what they had accomplished. The speaker likened the growth of the Hardwood Exchange to that of a tree, comparing the advancement made each year to the annual rings which are shown at the end of a log. Some years, he stated, show either a cessation of growth or but a limited advancement, which compare with the years in which cold weather or mishaps of some sort cause a poor formation of the annual wood tissue of tree growth. The general progress of the exchange, he stated, could be traced in much the same way.

Following these remarks, the chairman called upon the various committees for their

Chairman Schreiber of the Labor Committee was next in order. This committee consisted of Chairman Schreiber, Theodore Fathauer, F. W. Black and W. M. Hopkins. The report showed gratifying results for the year.

The report of the Trade Relations Committee followed. This committee is composed of O. O. Agler, W. C. Schreiber, A. R. Vinnedge and C. F. Holle and has accomplished much for the good of the trade. The report was as follows:

## Report of Trade Relations Committee

When your president advised the chairman of the trade committee of his appointment, he outlined in a brief general way his ideas of the duties of the committee, which included the relation of the exchange to the National Hardwood Lumber Association and all questions pertaining to the betterment of the trade in general as applied to our membership, including freight rates, car service and river affairs.

The question to which this committee has given its most serious consideration has been the creation of a committee on complaints, as submitted to this exchange in our report of October 16, 1909, and I am impressed with the belief that, like the parrot in the story, I talked too much at that October meeting, and fear that I may have raised hopes in the hearts of this membership for the speedy accomplishment

This exchange is one of the oldest hardwood lumber organizations in this country, and it has ever striven to advance the interests of its members, to protect the reputation of Chicago as a lumber market, and to forward the commercial interests of the city at large.

In order for any organization to be successful in the work which it sets out to perform it must possess for a nucleus a combination of interests appealing directly to each one of its component parts. If it fails to possess such a nucleus it will lack the necessary elements of cohesion, and will therefore rapidly disintegrate. The more local these elements of interest, the closer is drawn the membership, and, on the other hand, the more general or diverse the elements of interest, the less they appeal to the individual member. It is possible for a number of combinations or organizations having interests of a nature purely local for their nuclei to combine for the accomplishment of certain objects which are too general to engage the interest of any single organization, and at the same time each combination may maintain its individual entity for the accomplishment of the original objects which are local to its membership.

No better object lesson of the harmony which may be evolved from the lesser combination working to a given end through and by means of a greater organization can be cited than that of the relationship existing between this exchange and the National Hardwood Lumber Association. The latter organization has established a system for the inspection of hardwood lumber that has become universally accepted in all markets, which, of course, includes that of this city. It has developed an inspection bureau by which competent inspectors are maintained in all of the large consuming markets, also in the lumber producing territory of this country.

In the accomplishment of this work the Chicago Hardwood Lumber Exchange has played no small part. It has always loyally supported the National body, and has acquiesced without question in the rules of inspection which have from time to time been promulgated by that organization. What the National combination has done could not have been accomplished by our local exchange, yet the National organization could not have done what it has done without the support and assistance of this exchange and that of many other local organizations of a similar nature. It is therefore with much pleasure that this committee is able to report the continued existence of the cordial relations between this exchange and the National association.

This committee urges upon its membership the necessity of submitting to it all information regarding unfair and unjust claims for demurrage and of inequitable freight rates as this information develops in the course of their business transactions. It is only by taking prompt action on such matters and putting the entire influence of this exchange behind them that reforms can be effected.

In regard to the river, your committee does not know much about the river. However, if in the future we should be so fortunate as to get our entire committee together, we shall go

let complete. It was the desire of our committee to have this presented to the exchange before the expiration of our term of office, and would recommend that those succeeding our committee at the very earliest date possible have such a booklet issued to further the work of this exchange, which we consider on a good foundation and well on the road to success.

With the large membership of our present exchange, with the push and energy shown by our officers and those interested in the furtherance of making Chicago the Great Central Market, we feel that we have accomplished, in a measure, the results sought for.

In conclusion, our committee wishes to extend to the officers of our exchange our thanks for the hearty cooperation by encouragement not only in the way of suggestions, but financial backing to make it possible for us to obtain these results.

Following the report of Chairman J. S. Trainer of the Market Conditions Committee, the annual reports of the officers were read. The report of Treasurer F. B. McMullen, which follows, showed the treasury to be in a healthy condition.

During the year we held nine regular meetings. Record of attendance was only kept for the last seven meetings. Eleven missed one meeting; 6 missed two meetings; 8 missed three meetings; 6 missed four meetings; 2 missed five; 3 missed six; 5 attended every meeting. Out of a possible attendance of 293, 162 attended, or a percentage of 55.

Five meetings of the board of managers were held, the attendance being 60 per cent.

After the Secretary's report the Chairmen of the Nominating Committees told of what they had undertaken in the selection of officers for the ensuing year. The ticket under the name "Selected Firsts," which was recommended by the committee consisting of Theodore Fathauer, C. L. Cross and F. M. Baker, had practically the same candidates as the opposing party styled "Panels." The committee for the latter included J. S. Trainer, chairman, O. O. Agler and E. C. Schoen.

C. L. CROSS, TREASURER

out and look at the river and report what we will do with it at a later meeting.

Chairman Hayden of the Publicity Committee then reported as follows:

#### Report of Publicity Committee

March 26, 1910.

To the members of the Chicago Hardwood Lumber Exchange: Your committee, through its chairman, takes pleasure in presenting to members of this exchange its first annual report of the work of furthering the publicity of Chicago as the Great Central Market for the distribution of millions of feet of hardwood lumber.

While the committee was not selected until October, 1909, the hearty and liberal cooperation of the exchange members has made it, in the judgment of your committee, not only a success financially, but one that has given publicity not only to the manufacturing but to the consuming centers of this country.

The cordial cooperation rendered our committee by the exchange members at our meeting held November 27, 1909, authorizing the issuance of 150,000 stickers, made it possible for active and, we feel, practical results during the late fall and winter with the trade.

As chairman of the committee I have had a number of compliments on the work of the exchange in the very neat and practical method of advertising to the world at large through this medium.

Your committee had other ideas in the way of publicity to present, and plans were formulated to lay before our members a booklet giving a list of the members of the exchange, special lines of trade followed by them, and extracts from the by-laws, or a code showing what our exchange stood for; but it was concluded to await the revision of the by-laws and other important matters necessary to make this book-

#### Treasurer's Report

Cash received from former treasurer, J. L. Lane.....	\$ 542.75
Cash received from dues and sale of stickers through office of the secretary from March 29, 1909, to March 26, 1910.....	1,513.15
Total.....	\$2,055.93
Expenditures.....	1,498.00
Balance in bank.....	\$ 557.93

Secretary Dion reported in a concise and comprehensive manner as follows:

#### Secretary's Report

Upon the election of the present administration our exchange comprised thirty-three members. During the year, one of this number was suspended for nonpayment of dues, and one concern resigned. As a result of the membership committee's energetic work, twenty-seven concerns were added to our roll. One of these resigned on account of withdrawing from this market. This brings our membership to date to a total of fifty-seven—four of which are non-resident—a gain of 84 per cent in membership.

Your secretary received and turned over to the treasurer \$1,513.15 during his term of office, \$1,365 of which was received for dues and \$148.15 for stickers. There is due the exchange \$210 for back dues and \$43.70 for stickers. For stickers turned over to your secretary the treasurer paid \$185. Adding the amount received from the members for these stickers (\$148.13) to the amount still due for same (\$13.70), makes a total of \$191.83, a difference in favor of the exchequer of \$68.53 of which was used for postage, the balance representing 2,000 stickers which the publicity committee secured gratis from the printer.

Following the report of these committees, the president appointed tellers to distribute ballots, and following the voting they adjourned for the count. During the intermission various exchange members and visitors were called upon for remarks. Theodore Fathauer, in a short talk, recommended that the Chicago Hardwood Exchange endorse the candidacy of F. A. Diggins of Cadillac for the presidency of the National Hardwood Lumber Association, the annual meeting of which takes place in June, at Louisville.

Following Mr. Fathauer's suggestion, the tellers reappeared with the ballots, and reported a victory for the "Selected Firsts," the following new officers being elected: F. L. Brown, president; W. C. Schreiber, vice-president; F. B. McMullen, secretary; C. L. Cross, treasurer, and H. S. Hayden, J. S. Benedict, Fred D. Smith, J. S. Trainer, F. M. Baker, F. C. Van Norstrand and Edward E. Steele, directors.

Before adjournment W. C. Schreiber put Mr. Fathauer's previous suggestion in the form of a motion, which was amended by Mr. Fathauer who proposed that F. A. Dig-

J. S. TRAINER, DIRECTOR

F. M. BAKER, DIRECTOR

F. C. VAN NORSTRAND, DIRECTOR

gins be notified that such action had been taken by the exchange. Upon the suggestion that perhaps the organization was a little hasty in acting in this matter without more intimate knowledges of the qualifications of Mr. Diggins for the position, O. O. Agler, who is now president of the National Hardwood Lumber Association, made the statement that there was no one so well qualified, both from experience and personal efficiency, to fill the position. Mr. Agler has had connections with Mr. Diggins for several years, along the line of association work, and is in a position to give an authentic opinion. Mr. Agler's speech resulted in generous applause and a unanimous vote in favor of the motion.

The business of the association having been concluded in regular order, President Brown, before calling for the motion of adjournment, gave a short talk commending Secretary Dion for his excellent services of the past year, and stated that it was only on account of the pressure of business that he was not elected to office again. President Brown, however, expressed full confidence in Mr. Dion's successor. Following these remarks, a most successful and enjoyable meeting came to an end.

#### The Attendance

O. O. Agler, Upham & Agler.  
John S. Benedict, John S. Benedict Lbr. Co.  
John S. Benedict, John S. Benedict.  
S. C. Bennett, Hardwood Mills Lbr. Co.

#### Why Saws Cup

There are several good causes for cupping besides overcrowding, to which it is usually attributed, according to an article in the Woodworker. In the first place, if the rolls are out of line with the saw, the saw will cup, and if the rolls are out badly this will result, no matter how slow the feed. A saw will cup when the teeth get sprung on one side, as they often do, and it is a mighty good idea to always go over a saw with a gauge and see that the teeth are in the exact center; it will often save a good deal of needless worry and bad lumber. A saw will cup when a few teeth have corners broken off by striking some hard substance, or for any other reason. Then again, if the tension is all one one side, or if the saw is dished, it is very liable to cup; and last, but not least, our arch enemy pitch causes a great deal of trouble of this character by getting on the saw teeth just back of the point.

There has been a great deal said in regard to wash-boarding, and while it can be and is caused by the teeth being too long, it is equally true that, unless the tension is good all the way out to the front edge, the saw will have a tendency to wash-board. Of course, this is caused by the extreme tooth-edge becoming a little loose, causing a fluttering at that point; as it starts to cut it will vibrate with the grain of the wood. Another cause to which wash-boarding can be attributed is an excess of swage. This is particularly so with shingle saws, and if true with shingle saws, why not with a band?

In speaking of straining devices, there is really only one perfected type, and that is known as a knife-edge balance; and after the filer has worked with the old style strain, in which the upper wheel is secured to the machine with the usual slide, ways or columns, if then he is fortunate enough to get a machine with a knife-edge balance, he will see the very great difference in keeping his saws in shape, and will find that with a knife-balance it is much less difficult to keep the saws in trim than with the old style. As to weighing a saw down in order to make it do good work, extensive experiments have proven it anything but feasible. When a saw is fitted and tensioned right, it requires very little weighting or straining to make it work properly, and if it isn't in shape, no amount of straining will help.

He who tells all he knows soon knows no more, and that ends him.

# VENEERS

## VENEERED AUTOMOBILE DASH-BOARDS

The fact that automobile body manufacturers have come to require dashboard producers not only to furnish veneered panels, but to finish them off with brass trimmings and to cut all necessary openings, has led certain veneer houses, not desiring to go beyond the purely veneer line, to turn that class of business over to people who have the proper facilities and knowledge to make a specialty of automobile dashes. Indeed, the industry requires specializing, and it is only by that means that it is made a good paying proposition.

Five-ply veneer is not commonly used in this connection, though three-ply is used to a more limited extent, one of its most objectionable features being the fact that it requires unusually thick facing, thus calling for an unnecessary consumption of the expensive wood used for that purpose. As in all veneering, a core of common wood, commensurate in thickness with the ultimate thickness of the dash, is used, chestnut, poplar and ash being favorably thought of in the order given. While ordinary glue joints are generally deemed sufficient in piecing the core, some manufacturers insert a splice at each joint for further reinforcement. The core is always cross-banded by the second layer, which is usually poplar. The operation of gluing on this layer, while best done separately, is often performed in connection with the application of the last or facing coat, the two being glued up and put into the press at the same time. The most delicate and interesting step is the preparation and gluing up of the outside veneer, mahogany or Circassian walnut usually being used for this purpose, the first named to the greatest extent.

After gluing up the core, the first operation consists of cutting it to the required shape. In the case of rectangular dashes, or any dashes having square corners, this process is comparatively easy, but where a curve is required the operation is not so simple. The first thing done in this case is to saw the core, not on a circumference, but octagonally, or with smaller divisions, according to the ultimate size of the dash. On these faces are now glued strips of the finishing wood, the grain running around the circumference, and the outer edge, when all the strips are on, forming the required curve. These strips are the same thickness as the core, and after gluing up, the joints are planed down so as to be perfectly flat. The second and third plies are now put on as described, being first cut to the required shape, and the edge is dressed down accurately.

This formerly was all the dash builders were required to perform, and to a certain extent that is still the case, but as a usual thing the automobile people now require a

more extensive finishing, operations which require appliances not usually found in connection with the usual veneer plant. So from here on the process is not, strictly speaking, within the realm of the veneer business.

The edge, previously referred to, merely rounded off and dressed down, often suffices. When brass binding is required, however, this finishing is not necessary, the brass being clamped firmly over the edge, and covering up any rough places. Another method in vogue is to run a round, brass rod around the edge, carrying it to the bottom on both sides and there securing it. This method necessitates the cutting of a groove on the circumference, previous to ultimate finishing.

This operation being performed, the dash is given the required finish and polish, according to specifications. The cutting of opening is left as the last operation, and requires more or less special apparatus, or at least machines which the ordinary veneer man would not have much use for otherwise.

## THE VENEER SITUATION

Veneer manufacturers generally are today loaded down with contracts which will cover their output for some time ahead at very low prices. The veneer and panel men have apparently not been able to see very far into the future, and it is surprising that they should have taken on contracts for a long time ahead at prices which were not profitable even with much lower log cost than that of a year ago. With hardly an exception, at prices the veneer makers are now getting, they could sell their logs at values which would show a better profit than the timber brings in the form of veneers. The average veneer man is really making his customer a present of the profit on his timber, and is securing little margin on the making of veneers and glued-up stock. It would seem that the veneer maker ought to be able to educate himself up to decent values. He is producing a product that not only takes the place, but is a better material than solid wood, at a good deal less than lumber values.

A few leaders in veneer production, who have closely analyzed the business for years, have attempted to educate veneer producers on a cost system, but thus far apparently the efforts have been futile.

Reports received by the RECORD from more than a score of veneer manufacturers recently are all to the effect that they are loaded down with business for from six months to a year, and are unable to take on any more orders. They are all very cautious about stating what they are getting for their stock, but it is a matter of common knowledge that the prices they actually are receiving are mighty little in excess of those they accepted during the dull trade period of a year and more ago.

On April 6 there was a meeting at the La-Salle Hotel, Chicago, of the Rotary Club and the Panel Club of the National Veneer & Panel Manufacturers' Association.

C. L. Willey, the prominent Chicago veneer manufacturer, returned from a three months' European trip on March 26. Mr. Willey attended the mahogany auction sales in Liverpool and secured about 1,300 African and Cuban mahogany logs of unusual quality, and some of which are remarkably fine figured stock. He also purchased some fine Circassian walnut and English oak logs. These were shipped via New Orleans and are now arriving at the Chicago plant. Very shortly Mr. Willey will have a line of veneers in mahogany, Circassian walnut and English oak that will please the most exacting user of high-grade veneers.

A local paper announces the incorporation of the American Mahogany Company, at Detroit, Mich., with a capital of \$1,000,000. The company is backed by a number of Michigan capitalists, who, it is said, plan the construction of saw and veneer mills at Tampa, Fla.

The large 2,500-pound fly wheel in the Central City Veneering Company's plant at Huntington, W. Va., burst into fragments recently and damaged the factory to a considerable extent. The loss is estimated at about \$1,500. None of the employees of the plant were hurt.

The large veneer plant at Reed City, Mich., which was destroyed by fire some time ago, will undoubtedly be rebuilt at an early date. Grand Rapids and Chicago capitalists have become interested, and a new company is being organized with \$75,000 capital stock, \$45,000 of which will be paid in. Already \$13,500 worth of stock has been taken in Reed City. The wrecked plant at Reed City, which has never been cleared away since the fire, contains considerable valuable machinery which, with slight repairs, can be used in the new factory.

The National Veneer Products Company, of Mishawaka, Ind., is crowded with orders for its celebrated "Indestructo" trunks, and it is expected the factory will turn out 100,000 of these trunks this year. The demand for these trunks is largely traceable to the liberal advertising policy which the company has pursued.

The Jamestown Panel & Veneer Company of Jamestown, N. Y., has been reorganized with \$150,000 capital stock. The increase in capital was made to cover the expense of enlarging and improving the plant, and to afford the concern more working capital.

Indianapolis, Ind., is keeping well to the fore as a veneer producing center. The latest addition to that city's veneer fraternity is the firm of Drinkard, Dungan & Co., which will engage in the manufacture of quarter-

W. R. Brickard, who for several years has been superintendent of the Sanders & Egbert plant at Goshen, Ind., is one of the principals in the new concern. The plant will have two saws and will be equipped with an electric motor drive. It is expected that it will be in operation by May 1.

Church & Hooker have established a veneer factory at Bradford, Vt.

C. T. Jarrell of B. C. Jarrell & Co., Humboldt, Tenn., attended the recent veneer meeting at the La Salle Hotel, Chicago. Mr. Jarrell has been in the veneer business about thirty years and is now an extensive manufacturer of rotary veneers, though specializing to a great extent in fruit packages.

The Goshen Veneer Company of Goshen, Ind., is meeting with much success and reports business active. This company has been in steady operation without loss of a single day since January, 1906, when it began running its present modern plant. New equipment has lately been installed in the company's factory, so that it has now a most up-to-date plant, employing over 100 men.

The St. Louis Basket & Box Company, of St. Louis, Mo., recently increased its capital stock to \$500,000. It is building a large addition to its factory, 127 feet by 60 feet, and four stories high. This structure will be equipped with the latest appliances for the manufacture of veneers, panels, etc. The company also contemplates buying additional timber lands, and is making extensive plans for taking care of its constantly growing business.

The Western Veneer & Box Company, large producer of spruce and cottonwood veneers, at Edmonds, Wash., contemplates improvements in its mill for the manufacture of splint and veneer baskets, drums, spice barrels and

a wide range of articles in the veneer line. The company has a capacity of about three cars a week, and has enough orders on its books to run for some time.

Manager Doty of the veneer department of the Northwestern Cooperage & Lumber Company of Gladstone, Mich., was in Chicago on business a few days ago.

A. D. Wilcox, formerly with the Chicago branch of the Holland Veneer Company, which is now in the hands of receivers, has been on an extensive trip to the principal automobile manufacturing cities, soliciting orders for automobile dashboards. He is reported to have booked a large volume of business, which will be taken care of by the new concern of which Mr. Wilcox will be the head.

C. E. Curtis & Brother, who do a veneer panel business at 1165 North Elizabeth avenue, Chicago, will move May 1 to their new shop at Western avenue and Fourteenth street, where they will have more commodious quarters and will be better fitted than ever to take care of the many orders which they have constantly on hand.

Grand Rapids veneer concerns report business active, even though the furniture manufacturers are not getting the trade they expected. Secretary McCoy of the Rice Veneer & Lumber Company, reports that the company is getting its usual business. The Henry S. Holden Veneer Company is also having a good trade. The Holden company received a car of fine birdseye maple April 6.

The Van Dyck Panel Manufacturing Company, with a capital of \$100,000, was recently organized to operate at New York City.

A London trade journal reports an astonishing price recently paid for a mahogany log in the Liverpool market. The log contained 2,242 superficial feet and was sold at the yards of the Edward Chaloner Company for \$6,207.

## Annual Report Philippine Forester

George P. Ahern, director of forestry in the Philippine Islands, has recently submitted a report of the work of the year 1909 which has progressed rapidly and satisfactorily, in accordance with the program laid down at the beginning of the fiscal year. Field work shows results of the labors of men much interested in the work, the majority of whom have had from three to eight years service in the Philippine forests. Rapid work in the Philippines is difficult to attain owing to the great number of comparatively unknown tree species, lack of transportation and of reliable data. At least one year's experience is necessary to efficient service.

The appropriation allotted to the bureau during the past few years has been insufficient to properly care for the vast property committed to its charge. The virgin

forest area of the island comprises approximately 40,000 square miles, or one-third of the total area. Besides this there is estimated to be 20,000 square miles of second growth timber, which will yield considerable quantities of small size lumber and firewood. With an appropriation commensurate with the work to be done, a sufficient force of forest officers could be employed, and many evils thus eradicated which now are a source of considerable loss to the service. Also many extensive improvements could be introduced, with a view to more intensive and remunerative management of the forests. An additional appropriation of approximately \$10,000 has been granted for special work in two of the provinces. It is the aim of the bureau to extend the area of intensive management as means are provided and men are

trained. With this view in mind more than one-half of this appropriation has been allowed for educational work in the high schools.

The field force of the division of administration consists of four foresters, nine head rangers, two assistant rangers, and five temporary rangers; a small force to distribute over 60,000 square miles. This division is charged with the supervision of the work of conservation of forest resources.

All applications for licenses to gather forest products must be O. K.'d by a forest officer of this division. Many licenses take out a very small quantity of forest products, or none at all, during the year. Three hundred and seventeen cutting areas were inspected by forest officers during the past year, especial attention being paid to the larger operators. Seven areas where these large operations are being conducted were studied in detail and reports and maps prepared. Approximately 3,000 kilometers of trail notes were taken by the officers of this division on a trip through regions which had not been previously mapped. Eight hundred botanical specimens were selected and sent to Manila by members. Fourteen hundred and eighty-eight parcels of land for sale or homestead were inspected.

In addition to this vast amount of work renewed efforts were made to suppress all illegal operations in the forests, and as a result the records show considerable success, complaints having been filed against almost two hundred persons, for prosecution under Section 25 of the Forest Act.

The work toward the creation of communal forests has gone rapidly forward, a circular from the office of the chief forester inviting the attention of municipal officials to the communal forest act having been productive of extensive results. In consequence almost one hundred municipalities have made application for communal forests. The requests are forwarded to the forest officers, who are instructed to examine the tracts in question and report on same. During the past year twenty-one communal forests were established.

Fire wardens are employed in the pine regions of Benguet and Letanto-Bontoc, the Igorrotes employed in this work take much interest in suppressing fires and in awakening a sentiment against the indiscriminate setting of fires in the pine forests and vicinity. This work will be extended during the coming year.

The main work of the division of investigation has been along the lines of inventory of forest resources and educational work. Commercially, the forests can be divided roughly into two classes; the dipterocarp forests, and all others. All the large stands show that from 33 per cent to 89 per cent of the total number of trees over 16 inches in diameter is composed of members of the first division, and furthermore that the

main bulk of these forests is composed of so few species that they can, from a lumberman's standpoint, be regarded as pure stands. The usual stand per acre runs from 5,000 to 40,000 board feet with an estimated average of 10,000 board feet for the entire area. It is roughly estimated that 75 per cent of the forest area of the island is found in the dipterocarp forests, in which the bulk of timber handled for export must naturally come. These forests produce woods of all grades, from the hard and durable Yacal, through the hard but less durable Apitong and Guijo, to the soft grades of Canguila and Lauan.

The remaining 25 per cent of the forest area is covered with mixed hardwood growth, mangrove swamps and pine forests. The mixed hardwood type furnishes, among others, the hard and durable Molave and Ipil and the highly prized Marra Tindalo, Acle and Banuyo. The forests that contain these are poorly adapted to lumbering on a large scale as the trees are scattered over extensive areas. Within limited sections stands of 5,000 feet per acre are occasionally found. Owing to the great local demand for these sections and the high cost of lumbering, it is not expected that they will produce any great amount for export trade.

The educational work accomplished by the bureau has been along the lines of instruction and propagandist work. A number of native Philipinos have been taken into the bureau as student assistants, with the title of temporary rangers. At the ranger's school, conducted during the month of August on the forest tract of the Cadwallader Lumber Company, at Limay, instruction was given in connection with the making of working plans for logging operations. The work was of as practical a nature as possible. During the year fourteen temporary rangers were carried on the payroll, nine of whom were given permanent employment, as they seemed best adapted to the work. Besides the work done by these men in connection with inspection and running trails, etc., considerable office work has been done and a large number of Herbarium and wood specimens collected. With a view to further educating the natives a good course has been established in the new Agricultural College. Good positions are open for the natives as well as for American foresters and they will be encouraged and assisted in obtaining sufficient technical training, either in American forest schools or in similar schools on the islands.

The propagandist work has consisted of a series of illustrated lectures delivered by a Philippine forest officer, a graduate of the Yale Forest School, by which it is estimated that 50,000 people have been reached. As a result widespread interest is apparent.

At the timber testing ground of Lamano, Bataan province, 577 additional tests have been started. The data on many of the tests begun in previous years is now avail-

able. There have been marked by forest officers in various parts of the island, a number of timbers actually employed in construction, with a purpose of inspecting them periodically and recording the data there obtained.

As no manager could be obtained for the laboratory at the beginning of the year no work has been done except the preparation of museum specimens, hand specimens and test species. A manager was secured in November, and has since had charge of the laboratory and museum work, and it is expected that a large amount of experimentations will be carried on during the coming year along these lines.

The financial report for the year shows a total amount available of \$58,723 and total expenditure of \$57,294, leaving a balance on hand of \$1,428.

### **Hardwood Record Mail Bag** **Seeks Oak Dimension Stock**

PHILADELPHIA, Pa., March 24.—Editor HARDWOOD RECORD: Do you know of any parties who manufacture quartered red and white oak in short stocks from 16 to 34 inches long in 1½, ¾, ¾, 4/4 5/4 and 6/4 inches thick, and from 3 to 10 inches wide? We are constantly in the market for the above stocks and could handle anywhere from 200 to 300 cars per year at satisfactory prices, delivered on a Philadelphia rate of freight, for cash. These stocks are usually cut on heading and other mills, and do you know of any parties who wish to manufacture any of this class of stock? If so, we should be pleased to have their names. We thank you in advance for the above information.

The RECORD is in receipt of the foregoing letter, and anyone who would like the company's address can have it on application.—EDITOR.

### **Who Wants Red Cedar Logs?**

BURNSIDE, KY., March 31.—Editor HARDWOOD RECORD: We would like the names of concerns who are in the market for choice cedar logs suitable for export. An associate of ours owns a nice tract of very choice cedar, well located, and we would like to find a market for the timber.

Anyone interested in the above offer can have the address by writing this office.—EDITOR.

### **Who Wants Oak Squares?**

LOUDONVILLE, O., March 31.—Editor HARDWOOD RECORD: Can you give us the names of any concerns that are in the market for 1½, 2, 2¼ and 2½ inch square dimension oak, all 12 feet long?

The address of the above writer will be furnished upon application to anyone interested in the foregoing material.—EDITOR.

### **Fort Smith, a Commercial Center of the Southwest**

Fort Smith, Ark., strategically situated in the heart of the industrial and mercantile industries of the great Southwest, is the logical center about which the business of that section rotates, being almost four hundred miles from Kansas City, the nearest city of any importance.

This thriving municipality is located on the Arkansas side of the state line between Arkansas and Oklahoma and from there extends a potent influence over the financial and commer-

cial interest of that vast trade empire bounded by the Missouri on the north, the Mississippi on the east, the Gulf and Rio Grande on the south, and extending west into New Mexico and Arizona.

Of vast importance to successful development is the perfect network of railroads which make Fort Smith a center of operation. This has justly been reckoned the railroad center of the Southwest, there being nine distinct systems radiating from it as an axis, besides the additional transportation facilities afforded by two branch lines and the two great rivers to which it has easy access. This perfect system of communication with all points makes it not only a great producing center in itself, but also the distributing center for the extensive domain surrounding it.

In a beautifully illustrated descriptive pamphlet recently issued by the Fort Smith Commercial Club, the advantages of that place as a point of commercial and industrial development as well as for a place of residence are succinctly set forth. The climate, so the book states, is superb, severe winter conditions being an unusual occurrence, the temperature maintaining an average of sixty degrees. This, coupled with the ideal conditions of humidity and rainfall, make the territory adjacent to this city of vast importance for farming and market gardening purposes. As a distributing point for this class of goods Fort Smith has become justly famous.

At the very gates of the city is located the largest timber reserve in the world, the estimated stumpage being twenty billion feet. It is popular knowledge that the state of Arkansas stands in fourth place as a lumber producing state, and a large percentage of this enormous timber supply of hard and soft woods is contiguous to Fort Smith and has been a factor of vast moment in the past development of that community and will continue, for a long time to come, to occupy the same position. Immense industries allied to the lumber trade have been a natural consequence of the availability of such an excellent source of supply. The largest wagon works west of the Mississippi, having a yearly output of 15,000 wagons, has been established in the city, as have numerous and flourishing furniture factories and similar enterprises.

Having touched on the transportation and supply conditions, it might be in keeping to say a word as to the financial and business side of the outlook. There are seven banking institutions of recognized high standing and unquestioned stability, whose aggregate deposits are \$5,000,000 and who have at their command \$8,000,000 in assets.

The selling market needs no comment, it is too obviously excellent, as is also the buying market or source of supply, a preëminent virtue being the reasonable cost of all forms of raw material. Further inducements are offered in the plentiful supply of skilled labor, the excellent water supply, the low tax and insurance rates and the splendid local transportation facilities, there being a million dollar belt line encircling the entire city.

In summing up it seems pertinent to mention the city as a jobbing center, it being contended that in proportion to its population this is the largest jobbing city in the world, an annual business of \$40,000,000 being transacted. To say Fort Smith is destined to grow means too little; it is destined to be one of the greatest communities in the West and is constantly affording new opportunities for various industrial enterprises, such as cotton, paper, hosiery and rolling mills, shoe, wire fence, metallic bed, sash and door, finished handle, fruit crate, box, buggy and agricultural implement plants; for potteries, building and paving brick, tile, truck, wagon nail and screw and glass plants; paper box, match, structural iron, shovel, furniture, specialties and veneer and wooden novelty plants and for a horseshoe factory and a lime kiln.

# Some Phases of Handle Production

## SELECTING A LATHE

By H. B. ALEXANDER

The selection of a suitable lathe for the handle plant is rather a difficult proposition, as there are a large number of makes on the market at the present time. Rather than buy merely on the recommendation of the manufacturer, it is wise to go slowly and by means of communications addressed to users of the different types of machines, to ascertain the good points of each relative to capacity, accuracy and stability.

There are lathes on the market that are cheap in price, and for the first few months will turn out fair work, but as a rule they will not keep it up, being too light in the working parts. They soon wear so that it is impossible to keep them in shape and manufacture uniform handles. There are others extremely high in price, and while there is no doubt but that they are good machines, yet owing to their complex construction the output is no greater than that of some of the more reasonably priced makes and repairs are more numerous and more expensive.

A good lathe should be as simple in design as possible and should have a minimum number of working parts. It should be so constructed that in the event of a handle being stuck, owing to poor stock, there would be no difficulty in getting to the source of trouble. There should be an adjustment whereby the finishing would move out of the way in case of an accident of this kind, enabling the handles to be driven out without nicking the knife.

The sliding, or expansion heads, without which there would be no throat in the handles, are the weak point in nearly every make of machine. These parts are made of various materials, some being of cast iron, some of Babbit and some of brass. All are subject to more or less wear. Wear in this part is very liable to cause variation in the shape of the handle and to make what is called "checker board", filling the throat with a multitude of fine holes which no amount of sanding will eradicate. Again it may cause a series of steps, which are equally objectionable. Nearly all difficulty of this character can be traced directly to trouble in the expansion head; either it is worn so as to allow play, or some of the screws or other parts are loose. The one exception is caused by making the handles too loose in the bushing before they come to the finishing knives. This is a point that has caused more trouble than any other, as so many turners show a desire to run their handles as loosely as possible, thus avoiding the time and trouble necessary to keep their front knives properly set. The handles should fit the barrel snugly enough to prevent jumping and shattering, and yet should not be tight enough to burn.

In connection with this branch of the industry, why wouldn't wood-fiber be a feasible substitute for the metal commonly used in expansion heads? It seems reasonable to suppose that this would do away with a large percentage of the trouble caused by wearing in these parts. It would have been tried before this, in many cases, were it not for the fact that stock thick enough is very difficult to obtain. For the present Babbit seems to have the preference over brass, as it is found to wear longer.

Some lathe manufacturers have been accustomed to reduce the distance between the roughing and finishing knives, an idea which has probably been carried too far, as in order to make neat, smooth, uniform handles, the long barrel is necessary. If there is only an inch or less between knives, then it will be necessary to run the handles so tight in the front head as to bring them almost to the burning point. Under such treatment the knife heads will not last for any length of time.

Knives on handle lathes should have just as careful treatment as on all other wood-working machinery, and care should be taken to give them a shearing cut, thus prolonging the efficiency of the knife and assuring cleaner and more satisfactory work. It is folly to attempt to run a knife after it has once become dull, as the work turned out is not only of inferior quality, but is also expensive to produce. By this means the grades of stock are much run down, as many handles are poorly manufactured or burned. Because of the large number of handle manufacturers doing a small business with inadequate machinery, the market is already flooded with low-grade handles, and it is not advisable to turn out any more of this kind of stock than is absolutely necessary.

Another point which is open to considerable improvement in handle lathes is the method of feeding in the blanks. There is probably only one proper way, namely, to provide a rack on the front end of the lathe sufficient to hold a dozen or more blanks and let the bottom blank rest on a set of feed wheels, which will open and close at the proper intervals to take in the blocks as they are needed. In order to keep the blanks square with the heads and in the center of the machines, they should pass through two sets of feed wheels, one set vertically and the other horizontally. The principle involved in the common form of feeds is to drive the blanks into a set of feed-wheels far enough so that they will be caught and carried along. The trouble usually experienced with this style is often due to a variation in the sizes in the blanks. The smaller

ones are driven in too far, thus making long heads, and the larger ones are not carried far enough, thus creating the opposite result. It is easily seen that in this way uniformity in finished handles is very difficult to obtain, and uniformity is one of the most essential qualities demanded by broom makers.

The pattern wheel or cam, as it is sometimes called, is located on some lathes at the front end, on some on the back side and some on the front side. The exact location is immaterial, and should be governed by the position of the machine and be placed where it can be gotten at easily for adjustment. Hardwood cams usually show the best results, for the reason that they show as good wearing qualities as the metal ones, and will allow of alterations in design, which is not possible if metal is used. Especially designed cams for the production of a certain type of handle can be produced very cheaply if hardwood is used, while if metal cams are required they must be usually worked for a long time before they are gotten to the desired shape. In addition, a wood cam can be produced in a few minutes with a hand saw, or if this is not available they are easily made with a common keyhole saw.

Running the handle too snugly in the barrel causes a good deal of friction at that point, and the barrel is consequently heated rapidly. If this were allowed to continue for any length of time the lathe would be brought to a stop. To avoid this, dip the front ends of the blanks about a quarter of an inch in some cheap oil (an article suitable for this use can be obtained for almost nothing, and should be kept in shallow pans handy to the lathe). The oil on the ends of the blank is thus drawn off to the sides of the barrel and keeps it cool. All that is on the sides is cut off at the first operation, and is usually wasted. Without proper care, and by dipping the blanks too deeply, the waste is considerable. About two barrels of oil, containing fifty gallons apiece, are required to run two lathes for a month, and in this time about 140,000 handles can be turned out, and as the initial cost of the oil is slight, the cost per handle is infinitesimal. Yet if it were not used the reduced amount of output would be a considerable item of loss.

## New Lines From Texas Into Mexico

A recent report of Consul Luther T. Elsworth of Ciudad Porfirio Diaz, states that the Kansas City, Mexico & Orient Railroad Company has planned to build a branch line from San Angelo to Del Rio, Tex. At this point a bridge will be constructed across the Rio Grande river, and from there the new line will run through Mexican territory into the Mexican district of Las Vacas, where it will tap the agricultural land opened up by the numerous irrigation systems, and will finally join with the National Railway in Mexico at Sabinas. The company is arranging for supplies to be used in the construction, and its address may be obtained from the Bureau of Manufactures, Washington, D. C.

VENEER AND BOX FACTORY W. D. REEVES LUMBER COMPANY, HELENA, ARK.

VENEER MACHINE DRIVEN BY ALLIS-CHALMERS TYPE K 10 H 220 VOLT VARIABLE SPEED DIRECT CURRENT MOTOR

ALLIS-CHALMERS RELIANCE ENGINE, 20 X 36, BELTED TO TWO GENERATORS

ONE 250 K W 60 CYCLE THREE PHASE 220 VOLT ALTERNATOR; ONE 50 K W 240 VOLT GENERATOR, ONE 3 K W 120 VOLT EXCITER.

FIFTEEN-INCH FLOORING MACHINE BELT DRIVEN BY 20 H, 220 VOLT INDUCTION MOTOR

THIRTY-INCH SURFACER BELT DRIVEN BY 20 H, 220 VOLT INDUCTION MOTOR

### Electric Drive for Manufacturing Plants

There is so much interest manifested in electric transmission and power machinery, especially for variable drive electrical power applied to sundry types of veneer and woodworking machinery, that in the RECORD of February 25 was listed the complete equipment of power and power transmission machinery recently furnished the W. D. Reeves Lumber Company at Helena, Ark., by the Allis-Chalmers Company of Milwaukee, Wis.

On this page are sundry pictures, including a

view of the big plant of the W. D. Reeves Lumber Company, views of both the steam and electrical power plant, together with a surfacer and flooring machine driven by motors, and a big veneer machine driven by a motor of special Allis-Chalmers type, which is capable of transmitting variable speed. This type of motor is particularly valuable in accomplishing maximum results in rotary-cut veneer work, speed being advanced with the diminution of the size of the bolt as the cutting progresses.

The absolute economy and efficiency of this

type of drive for a veneer cutter is so apparent that doubtless the majority of veneer manufacturers will find it economy to install them.

The RECORD is indebted to the Allis-Chalmers Company for the illustrations on this page.

The Escanaba Lumber Company is planning the erection of a hardwood flooring mill at Masonville, Mich., and hardwood for this purpose is being cut at its sawmill. The new mill will be up-to-date throughout and will be a great addition to the industry of Masonville.

## News Miscellany

### Reorganization Huntsville Lumber Company

On March 15, J. W. Kitchen of the J. W. Kitchen Lumber Company of Ashland, Ky., and Thomas N. Fannin of the Keys-Fannin Lumber Company of Ashland became associated with F. W. Webster and have bought out the Huntsville Lumber Company of Decatur, Ala. This company is one of the best known hardwood lumber and dimension houses in the country, and has conducted a successful business for many years. Mr. Fannin became president of the reorganized company, F. W. Webster vice-president and manager, J. W. Kitchen treasurer and Thomas H. Wilson secretary and assistant treasurer. The mills will be run and the business conducted with the same policy as in the past, and the high standard of production that the Huntsville Lumber Company has heretofore established will be continued.

The company is putting in new machinery for manufacturing quartered oak veneers. This alliance will add materially to the financial strength and the high reputation of the Huntsville Lumber Company. The Jamestown, N. Y., office of the institution has been discontinued and hereafter the sales and executive departments will be located at Decatur.

### Meeting Executive Committee National Hardwood Lumber Association

A meeting of the Executive Committee of the National Hardwood Lumber Association was held at the organization's offices in Chicago March 24. There were present President O. O. Agler, Chicago; Vice-President F. A. Diggins, Cadillac, Mich.; Charles H. Barnaby, Greencastle, Ind.; Earl Palmer, Paducah, Ky.; and Gus J. Landeck, Milwaukee, Wis. Twenty-six applicants for membership were admitted. The other proceedings were of an executive character and involved detail work.

A meeting of the Inspection Rules Committee was also held on March 24 and continued over to March 25. At this meeting there were in attendance J. M. Pritchard, chairman, Memphis, Tenn.; C. R. Mengel, Louisville, Ky.; J. W. Dickson, Memphis, Tenn.; D. F. Clark, Minneapolis, Minn.; E. J. Young, Madison, Wis.; E. L. Edwards, Dayton, O., and D. H. Day, Glen Haven, Mich. The committee reviewed the correspondence pertaining to inspection rules which had been received since the Detroit meeting last June, and a report was formulated to cover these matters, which will be presented at the next annual meeting in Louisville, to be held on June 9 and 10.

During the meeting a conference was held with representatives of the National Wagon Manufacturers' Association, and an agreement reached whereby the wagon makers approved of the National rules on wagon stock.

### Michigan Hardwood Manufacturers' Complaint Before Interstate Commerce Commission

On March 24 Commissioner Walter G. McCormack on behalf of the Interstate Commerce Commission conducted a hearing at Cadillac, on the complaint of the Michigan Hardwood Manufacturers' Association against the Transcontinental Freight Bureau in the matter of rates on hardwood lumber and forest products from the lower peninsula of Michigan to Pacific coast points.

The contention is that the present rates from the lower peninsula constitute undue discrimination against this section as compared with the upper peninsula of Michigan, Wisconsin points and Chicago. William A. Percy of Memphis, the attorney who won the Burgess case, to which this is similar, appeared for the complainants. F. C. Dillars of the Union & Southern Pacific

appeared for the railroads, with the exception of the Santa Fe, which was represented by J. J. Coleman, assistant general freight agent in charge of lumber and coal traffic. Many witnesses were examined, including lumbermen and railroad representatives. The complainants have until April 25 to file an amended brief, and the defendants have until May 25 for rebuttal. It is expected that oral argument will be made before the Interstate Commerce Commission at Washington some time in June. From the gist of the complaint, which follows, it looks as though the Michigan hardwood lumber and flooring contingent would secure a favorable decision, although heretofore complaints made direct to the railroads have been turned down.

The petitioners are manufacturers of hardwood lumber comprising ash, basswood, beech, birch, elm and maple. It is shipped in carload lots and usually loaded heavy, the average weight of dressed lumber being from 45,000 to 50,000 pounds per car, and the rough lumber about 60,000 pounds per car, making the average of rough and dressed lumber at least 50,000 pounds per car. The cost of service is low and risk is not great.

February 22, 1896, the defendants voluntarily put into effect a 75-cent rate on this commodity from all Michigan and other territory to Pacific coast terminals, which rate was in force until January 17, 1904, a period of eight years. During this time your petitioners, at considerable expense, built up a substantial trade in that territory. January 18, 1904, the rate was arbitrarily advanced to 85 cents in all territory formerly covered by the 75-cent rate.

The petition further goes on to refer to the decision of the commission in the matter of Burgess et al. against the same freight bureau last year against the same 85-cent rate from Chicago points to the coast, to the effect that the same was excessive, and ordering a rate of 75 cents, further stating that after the railroads reduced that rate from certain territory they left the rate from the lower peninsula of Michigan at 85 cents, as formerly; also that the difference in rate of 10 cents per 100 pounds between manufacturers in Wisconsin and upper Michigan and those of the lower peninsula means a difference of \$4 per thousand feet on rough lumber and from \$2 to \$2.50 per thousand on flooring, and this handicap has almost wiped out the business to the Pacific coast and will eventually wipe it out entirely unless relief is given us, as we cannot hold our trade in that territory except on an equal basis. Some of our manufacturers have been forced to reduce the price to a basis of 75 cents, absorbing the 10 cents difference themselves at a large sacrifice. This has been done temporarily, as they could not afford to lose the valuable trade connection already made on the coast, and with the hope that a 75-cent rate would soon be issued.

A continuation of an excessive rate tends to stimulate a larger importation of foreign woods to Pacific coast markets and actually results in decreased tonnage west-bound for the railroads and more empty cars to carry in the opposite direction. We are advised by the originating railroads in lower Michigan that they are in favor of a 75-cent rate, and we have their support to our application. It is generally conceded that this commodity is desirable business on account of the large average tonnage per car and the slight risk to the carriers. The minimum weight on this commodity is 40,000 pounds per car, but the average shipments of hardwood lumber to the Pacific coast from our territory will average much more than that.

A petition is therefore prayed for a 75-cent rate and also for a refund of all overcharges on shipments from August 1, 1908, which is the date the rate was reduced from Wisconsin and upper Michigan points.

### Tallahatchie Lumber Co. Starts New Plant

The Tallahatchie Lumber Company of Philipp, Miss., has just started in operation a complete modern sawmill, equipped with a 12-inch band-saw and 12-inch resaw, and with a separate building for cutting up slabs and low grade stock into dimension sizes. The concern will make a specialty of thin lumber and will also manufacture furniture, dimension stock and veneer flitches.

The company owns 14,000 acres of fine hardwood timberland in Mississippi and has an option on several thousand additional acres, which will furnish sufficient timber to run the mill

about twenty years. It has up-to-date equipment for logging, consisting of several miles of railroads, locomotives and cars, the latest type of McGiffert skidder and loader, and the latest improved Clyde ground skidder. After the merchantable timber is taken from the forest a portable cross-tie mill works up the balance of the trees which are suitable for cross ties, so that no timber of any value is wasted. After being cleared the land is put into cultivation, and arrangements are now being made to have the agricultural end of the work put in charge of a graduate of the Mississippi Agricultural College. The Tallahatchie Lumber Company is certainly making a very close clean-up of its timber properties, and is conducting its operations on a scientific basis.

### Program for N. L. M. A. Annual

While details of the program of the forthcoming annual meeting of the National Lumber Manufacturers' Association, which will be held at New Orleans, La., on April 19 and 20, have not yet been decided, Manager Leonard Bronson announces the following features:

APRIL 19, 10 A. M.

Opening proceedings.  
Roll call.  
Credentialed.  
Addresses and reports of officers.  
Reports of standard committees, etc.  
Reports from affiliated associations.  
Address by representatives of the national administration.  
"Timber Land Taxation," by Prof. Fred Rogers, Yale University, New Haven, Conn.

APRIL 19, 2 P. M.

Address, "The Problem of Private Forestry," Hon. Henry S. Graves.  
Symposium—Trade Relations and Conditions, eight minute prepared addresses. (This part of the program is not complete, but probably will include the following speakers: H. M. Graham, Brinson, Ga.; W. B. Stillwell, Savannah, Ga.; E. C. Fosburgh, Norfolk, Va.; Fred R. Balcock, Pittsburg, Pa.; R. H. Vansant, Ashland, Ky.; C. A. Bigelow, Bay City, Mich.; William Irvine, Chippewa Falls, Wis.; J. E. Rhodes, St. Paul, Minn.; J. Lewis Thompson, Houston, Tex.; J. H. Bidell, Bellingham, Wash.; D. E. Skinner, San Francisco, Cal.; George X. Wendling, San Francisco, Cal. Other prominent lumbermen are expected to take part in this feature of the program.)

APRIL 20, 9:30 A. M.

"Utilization of Waste in Forest and Mill," by Capt. J. B. White, chairman Executive Committee, National Conservation Association.

"The Box Industry and its Relations to Lumber Consumption," by a Pacific coast representative.

"Forest Fire Prevention and Control," by Charles E. Brower, secretary of the National Classification Committee of lumber and wooden box interests of the United States.

"Lumber Finances from the Banker's Standpoint," by Charles Janvier, vice-president of the Canal-Louisiana Bank & Trust Company, New Orleans, La.

APRIL 20, 2 P. M.

"Future of Stumpage and Lumber Values," by James D. Lacey of Chicago and New Orleans.  
Reports of committees.  
Unfinished business.  
Election of officers, etc.  
Adjournment.

A very interesting entertainment program has been planned, which will take up all the leisure time of the visiting delegates, and embraces special features for the ladies. The Southern Cypress Manufacturers' Association is the host on this occasion.

Tuesday, April 19, 2 p. m., ladies' pedestrian trip through French Quarter.

Wednesday, April 20, 11:30 a. m., ladies' auto trip around the city, including luncheon and reception at the Country Club.

Wednesday, April 20, 7 p. m., dinner-dance at Grunewald Hotel.

Thursday, April 21, trip for delegates and ladies to Garyville, La., where cypress operations will be shown in full, including swamp work and sawmill.

The National Lumber Manufacturers' Association is one of the large and strong lumber organizations of the country. It is composed of a

number of affiliated associations of manufacturers, each of which will be represented by delegates at this forthcoming annual. Following is a list of these affiliated associations and the names of the delegates who will attend this meeting:

**NORTHERN PINE MANUFACTURERS' ASSOCIATION**  
William Irvine, Chippewa Falls, Wis.  
Edgar Dalzell, Minneapolis, Minn.

**NORTHERN HEMLOCK & HARDWOOD MANUFACTURERS' ASSOCIATION.**

W. C. Landon, Warsaw, Wis.  
Charles A. Goodman, Marinette, Wis.  
A. L. Osborn, Oshkosh, Wis.

**WISCONSIN HARDWOOD LUMBERMEN'S ASSOCIATION.**

F. H. Pardoe, Wausau, Wis.  
E. E. Finney, Marshfield, Wis.  
B. F. McMillan, McMillan, Wis.

**YELLOW PINE MANUFACTURERS' ASSOCIATION**

H. H. Foster, Malvern, Ark.  
E. S. Crossett, Davenport, Ia.  
N. H. Clapp, Jr., Warren, Ark.  
J. A. Freeman, St. Louis, Mo.  
F. R. Gilchrist, Laurel, Miss.  
J. Lewis Thompson, Houston, Tex.  
L. Davidson, Houston, Tex.  
E. V. Babcock, Pittsburg, Pa.  
C. D. Johnson, St. Louis, Mo.  
John L. Kaul, Birmingham, Ala.  
N. W. McLeod, St. Louis, Mo.  
J. B. White, Kansas City, Mo.  
J. W. Martin, Yellow Pine, La.  
George Lock, Westlake, La.  
S. H. Fullerton, St. Louis, Mo.  
W. D. Harrigan, Fulton, Ala.  
Ed. A. Hauss, Century, Fla.  
E. P. Denkman, Hammond, La.

**GEORGIA-FLORIDA SAWMILL ASSOCIATION**

H. H. Tift, Tifton, Ga.  
William B. Stillwell, Savannah, Ga.  
J. B. Conrad.  
H. M. Graham, Brimson, Ga.  
C. E. Melton.  
E. C. Harrell, Tifton, Ga.

**NORTH CAROLINA PINE ASSOCIATION.**

E. B. Wright, Boardman, N. C.  
Ira Johnson, Norfolk, Va.  
J. T. Deal, Norfolk, Va.  
R. J. Camp, Franklin, Va.  
E. C. Fosburgh, Norfolk, Va.  
R. H. Morris, Norfolk, Va.

**HARDWOOD MANUFACTURERS' ASSOCIATION OF THE UNITED STATES.**

R. M. Carrier, Sardis, Miss.  
R. H. Vansant, Ashland, Ky.  
W. A. Gilchrist, Memphis, Tenn.  
George E. W. Luchmann, St. Louis, Mo.  
F. E. Gary, Turrell, Ark.

**PACIFIC COAST LUMBER MANUFACTURERS' ASSOCIATION.**

J. H. Bloedel, Bellingham, Wash.  
W. H. Boner, Everett, Wash.

**MICHIGAN HARDWOOD MANUFACTURERS' ASSOCIATION.**

F. L. Richardson, Alpena, Mich.  
Bruce Odell, Cadillac, Mich.  
W. C. Hull, Traverse City, Mich.  
John C. Ross, Bay City, Mich.

**SOUTHWEST WASHINGTON LUMBER MANUFACTURERS' ASSOCIATION.**

(Five delegates, names not yet received.)

**SOUTHERN CYPRESS MANUFACTURERS' ASSOCIATION.**

(Five delegates, names not yet received.)

**OREGON & WASHINGTON LUMBER MANUFACTURERS' ASSOCIATION.**

G. K. Wentworth, 208 La Salle street, Chicago.  
A. B. Hammond, San Francisco, Cal.  
J. W. Blodgett, Grand Rapids, Mich.  
C. F. Latimer, Ashland, Wis.  
B. C. Miles, Salem, Ore.  
E. B. Hazen, Bridal Veil, Ore.

**WESTERN PINE MANUFACTURERS' ASSOCIATION.**  
(Five delegates, names not yet received.)

### Lumbermen's Club Formed by Dickson Trade

The lumbermen of Dickson, Tenn., are now associated in an enthusiastic body, known as the Dickson's Lumbermen's Club. At a meeting held the latter part of March there was a hot contest over the election of officers, there being two tickets in the field, the "Woodpeckers" and the "Sapsuckers." The "Woodpeckers" won out, with the election of the following: John M. Smith, manager of the W. P. Brown & Sons Lumber Company's Dickson branch, president; F. H. Crow, head of the firm of F. H. Crow & Co., vice-president; H. T. Cowan, American Lumber Company, secretary and treasurer.

Forty members were enrolled at this meeting, representing eighteen firms, all of which are located at Dickson except three. The club will not devote its energies entirely to social affairs, but will make strenuous endeavors toward the upbuilding of the city of Dickson. This city handles on an average of a million feet of lumber per week, and maintains twenty-six men on the road buying lumber, and it is claimed that this is a larger number of lumber buyers than are traveling out of either Nashville or Memphis.

The enrolled membership of the club is as follows:

Jno. M. Smith, J. B. Sugg, E. C. Sugg, C. L. Faulkner, F. P. Hanley, R. L. Lembke, C. J. Agler, O. L. Faust, W. D. Bates, Campbell Woods and H. L. Grigsby, all of W. P. Brown & Sons Lumber Company.

A. W. Haines, H. T. Cowan, J. M. Duncan and R. L. Spain, all of the American Lumber Company.

D. T. Self, L. C. Self, W. R. Boyte and Wm. Bryant, all of the Dickson Planing Mill Company.

F. H. Crow, E. B. Crow and R. J. Martin, of F. H. Crow & Co.

A. B. Cowan of Maisey & Dion (Chicago).

W. R. Burch of Fullerton-Powell Hardwood Lumber Company.

W. A. Moore of Crandall & Brown.

S. G. Robertson of Hensly Lumber Company.

A. H. Leathers of Leathers Handle Company.

R. M. Holland of R. M. Holland & Co.

E. L. Harrison and Herman Harrison of E. L. Harrison & Son.

L. C. Mathey and E. L. Burch of Kaufman Stave & Lumber Company, Spot, Tenn.

J. A. Turner, S. W. Taylor and D. A. Slonaker, of S. W. Taylor & Co., McEwen, Tenn.

Earl Seager of Seager Planing Mill Company.

W. I. Choate, Choate & Winstead.

J. D. Campbell, Campbell Manufacturing Company.

A. W. Lucas and Jno. T. Crane of Lucas Land & Lumber Company, Waverly, Tenn.

W. R. Hegin.

### Woodenware Company in Financial Difficulty

The Two Rivers Woodenware Company of Two Rivers, Wis., has gone into the hands of a receiver, involuntary petition in bankruptcy having been filed with the federal court of Milwaukee by three of the creditors. Its liabilities are estimated at \$394,633.75, and its assets at \$433,360. This is the second time, during the last five years, that this concern has been bankrupt.

The Milwaukee Trust Company has been named as receiver. During the past thirty days, the petition states, the concern has been practically without cash, and the employees have been paid with money received in advance on contracts. Outstanding accounts have been assigned in payment of debts. Attempts were made to get extensions on some of the debts, but without success. The concern has contracts aggregating \$140,000 and employs 200 men.

### Insurance Advice

The firm of U. S. Epperson & Co., which acts as attorney and manager for the Lumbermen's Underwriting Alliance, issues a series of bulletins on lumber insurance topics, which are of inestimable value to the lumber trade. Epperson's bulletin No. 35 recites the fact that "a spark and a breeze" are the promoters of the average fire. The bulletin gives sundry advice to lumbermen on the prevention of fires. The basis of the suggestion is the small amount of time and money required to put properties in shape to resist spark ignition. In detail, it says:

"One of the most frequent causes of fire is an accumulation of dust on framing, rafters, etc. One of the quickest and most efficient means of eliminating this hazard, is an air or steam hose used thoroughly at least once a week. A

spark precipitated upon dry, fine dust is practically certain to start a fire which will spread with great rapidity, and be exceptionally hard to check.

"Another common source of fires is accumulated grease and oil on timbers, posts, floors or other woodwork. To remedy this, first use a strong alkali combined with sufficient elbow grease to thoroughly remove the precipitation, then cover with a good coat of whitewash or paint, preferably white, which will not only brighten the shop, but will act as a ready indicator of fresh grease smears. Wood surfaces coated with whitewash are fireproof to a certain degree, through chemical combinations. In cases where woodwork is hopelessly impregnated with oil, it should be metal-clad and kept constantly wiped.

"Hot boxes and defective frictions are always liable to cause sparks. All bearings should be properly oiled, but should be kept free from an over-abundance of grease, and from grit of any sort. All friction transmissions should be examined before work each day.

"There are two ways of suppressing fire started by a spark on dust deposits. The average workman will usually turn a heavy stream of water from a hose on the spot, and in that way very likely spread the burning particles to adjoining woodwork. If he should immediately pour sand or water directly upon the blaze, there would be no danger of spreading and the fire would be smothered in short order.

"There will probably always be danger from sparks landing in accumulated refuse. One of the most common causes of this sort of disaster is the slab pit, the best protection against which is a good refuse burner. Spark arresters should be kept always in repair, and all openings into mills should be tightly screened, thus while sparks will always be present, by eliminating the deposits upon which they feed, the fire risk can be materially reduced.

"The system of weekly self-inspection, now in operation in numerous mills, has already proved its worth. By this system a competent employee is appointed to make weekly examinations of all fire-fighting apparatus, and of the general conditions of cleanliness about the plant. Inspections by the men employed by the Lumbermen's Underwriting Alliance have shown a steady improvement in the mills in which this plan is being carried out.

"With the approach of the hazardous season, and with the fact always present that fires are ever liable to occur, it seems the part of wisdom to overhaul all insurance, and be certain that property is fully covered."

### Meeting Memphis Lumbermen's Club

At the regular semi-monthly meeting of the Lumbermen's Club, held at the Hotel Gayoso, Saturday, April 2, announcement was made that the Illinois Central system is getting out a tariff sheet which will allow lumber shipped from points on this system to Memphis, resawn or dressed here and then shipped through to final destination, on the original through rate. This will apply on both the Illinois Central and the Yazoo & Mississippi Valley railroads and is regarded as a most important concession. The tariff will specify that the lumber thus shipped to Memphis will have to be changed in form, either through resawing, dressing or other treatment. This is a phase of the milling-in-transit rate, but it has nothing to do with the old reconsigning rates which were in effect in Memphis for a number of years. Lumber that is shipped to Memphis and yarded will have to be handled as it has been during the past two years, that is, on the basis of a slight reduction on the eastern and northern rate from Memphis. The rate from local points of shipment to Memphis must be paid in full and the reduction from Memphis to the final point of destination is so slight as to make the combination of the two rates considerably more than the through rate.

Rail and Rail  
are now in  
the Illinois Cen-  
S. for the privilege  
in Memphis and the  
It is expected  
active within the  
made to get  
from the other railroad com-  
It has been argued that lumbermen at  
other points have this privilege and that Mem-  
phers, owing to its high rank, is fully entitled  
to it.

The Lumbermen's Club of Memphis has  
turned down the proposition brought forward  
by N. Butler Haynes for the establishment of a  
lumber exchange at which trading for both spot  
and future delivery might be effected daily.  
This matter was turned over to the Board of  
Directors some time ago for consideration and  
recommendation and the board reported at this  
meeting in the form of a resolution, stating  
that the club should take no official cognizance  
of the matter, but that it be considered by the  
members individually. This report was heartily  
endorsed. This does not necessarily mean that  
there will be no exchange, but it does mean that  
there will be no exchange sanctioned by the  
club as an organization. The chief objections  
to the proposition, it is understood, are the  
large expense entailed and the fear that the es-  
tablishment of the exchange under the auspices  
of the club would tend to lessen the influence  
of the club itself.

The attendance at the meeting was fairly  
large.

#### April Meeting Cincinnati Lumbermen's Club

The April meeting of the Lumbermen's Club of  
Cincinnati was held Monday evening, April 4, at  
the Gibson House. The usual dinner was en-  
joyed. The Pork Chops Band furnished vocal  
and instrumental music of the "rag-time" variety  
while the meal was in progress, and made a bit  
with everybody but President Cliff S. Walker,  
who says he is not an admirer of "Rings on my  
fingers," and as a consequence this delightful  
music was repeated for his especial delectation.  
Cigars passed, President Walker drew forth his  
treasured new gavel and knocked for order.

The secretary then read the minutes of the last  
meeting.

After the reading President Walker said: "The  
minutes should not be approved, as the secretary  
read that Mr. John Long of the New York Lum-  
ber Trade Journal was present and made an ad-  
dress. Evidently a joke has been perpetrated on  
Mr. Long, and this should be omitted."

This occasioned considerable laughter at Mr.  
Long's expense, who was present.

A motion was then made that the minutes be  
approved as read, which was carried.

Letters from the Lumbermen's Bureau, and  
others on economic subjects were ordered filed.

A letter from W. H. Perry, secretary of the  
National Wholesale Lumber Dealers' Association,  
thanking the club for its entertainment at the  
convention of the association in March, and ex-  
pressing the appreciation by the directors of the  
association, was read, and on motion approved  
and filed.

An invitation from the Master Plumbers' As-  
sociation of Ohio to attend its lecture on sewerage  
and scientific and sanitary sewage disposal, at  
the Ohio Mechanics' Institute, was read, inviting  
the members of the club to attend. The invita-  
tion was accepted and a vote of thanks accorded  
the Master Plumbers' Association.

Col. S. Stanberry, who is one of the Ohio Val-  
ley Exposition Commissioners, was present and  
stated the object of the exposition and invited  
the Lumbermen's Club to repeat the excellent  
display made at the last Fall Exposition in 1905.  
It was decided to appoint a committee to work  
in conjunction with the exposition commission-

ers, and report a plan at the May meeting. The  
chair appointed W. H. Hopkins, chairman; George  
Littleford, R. McCracken, W. A. Bennett and J.  
Watt Graham on this committee.

Ralph McCracken, chairman of the Advertis-  
ing Committee, made a report of the bids re-  
ceived and the work of his committee, of whom  
no representative was present but himself. He  
stated that the various plans submitted involved  
amounts ranging from \$600 to \$6,000.

Much discussion followed upon the merits of  
the advertising proposition as a whole, and the  
chair stated that the position of the club on the  
advertising matter was the same as it had been  
for three years, and he hoped some one would  
make a motion to relieve the situation. A vote  
was then taken on whether the club desired to  
advertise or not, and was decided in the negative  
by an almost unanimous vote.

The Committee on Permanent Headquarters not  
being ready to report, the chair said he would  
entertain a motion to discharge the committee.  
This was done and that matter also finally dis-  
posed of.

Lewis Doster moved that a vote of thanks be  
extended to Ralph McCracken and the Advertis-  
ing Committee for their long and thankless yet  
untiring efforts in their work of endeavor to ex-  
ploit the club and the market by club advertis-  
ing; also that the individual members of the lum-  
bermen's club take up with the trade papers the  
subject of advertising. This was adopted unani-  
mously.

During the debate many kind things were said  
of the work of the trade papers in giving infor-  
mation of the markets and news of the trade.

The M. R. Short Lumber Company and H. J.  
Rinehart & Co. made application for member-  
ship. Col. Stanberry also signified his intention  
of filing an application. The meeting then ad-  
journed.

Those present were:

S. E. Giffen.	A. Heider.
M. R. Short.	W. E. Johns.
H. A. Hollowell.	J. E. Dulweber.
W. J. Wright.	Wash. Recs.
F. A. Conkling.	W. H. Hopkins.
G. W. Hand.	Lewis Doster.
F. E. Linz.	C. M. Clark.
J. H. Wehry.	Will S. Sterrett.
T. P. Kirby.	J. H. Barclay.
J. N. Powers.	J. A. Van Orsdel.
G. C. Ault.	E. I. Stemmetlin.
Jas. Buckley.	F. L. Scott.
S. W. Rickcy.	Geo. Friedrich.
J. W. Long.	Chas. Groves.
Geo. M. Morgan.	J. D. Serena.

#### New Catalogue of Simonds Saws

The 1910 catalogue of the Simonds Manu-  
facturing Company, Fitchburg, Mass., and Chicago,  
Ill., is being distributed among the saw and  
planing mills and woodworking factories where  
saws, knives or files are extensively used. Re-  
arranged, revised, brought up to date, with  
many new articles added, the catalogue presents a  
complete list of the articles manufactured.  
The items of special interest are a new showing  
of inserted tooth and band saws; a more com-  
plete list of one-man cross-cut saws, cross-cut  
saw handles, saw tools, three new manufacturers'  
brand hand saws, new pruning, compass, keyhole  
and nests of saws, and wood saws, carefully ar-  
ranged and listed in a practical way; several  
sizes have been added to the hack saw line.  
Metal cutting saws for all machines are listed  
completely.

The catalogue is printed on a good quality  
of coated paper and the half-tone illustrations  
bring out the detail construction of the goods.

Much valuable information is contained in tab-  
ular form. Several pages are devoted to tech-  
nical descriptions and instructions regarding the  
economical use of Simonds products.

A copy of this book should be in the hands  
of every superintendent or filer who has con-  
stant use for saws or knives. The Simonds  
Manufacturing Company will send a copy free  
to any millman who will write for it.

#### Building Operations for March

Official reports from forty-three leading cities  
throughout the country, as compiled by The  
American Contractor, Chicago, indicate that build-  
ing operations, in the aggregate, are on a par  
with March, 1909. A decrease of operations in  
Greater New York of some five million dollars, is  
made good by the combined efforts of Chicago,  
Philadelphia, Minneapolis, Portland, Ore., and  
Rochester. Building operations in New York  
City are of such magnitude, comparatively, that  
a serious fluctuation there frequently sways to  
such an extent as to show a gain or loss in the  
aggregate, when the rest of the country is hold-  
ing its own or even increasing building operation.  
Eighteen of the forty-three cities present a loss  
of from 2 to 47 per cent, and twenty-five show a  
gain of from 2 to 252 per cent as compared with  
March, 1909. Cities showing a gain of over 50  
per cent are: Birmingham, 180; Detroit, 75; Grand  
Rapids, 56; Hartford, 145; Minneapolis, 89; Port-  
land, Ore., 66; Rochester, 80; Scranton, 252; To-  
ledo, 103. The particulars are shown in the fol-  
lowing table of statistics:

City.	March, 1910.	March, 1909.	Per Cent Gain. Loss.
	Cost.	Cost.	
Baltimore .....	\$ 959,275	\$ 732,290	30 ..

#### New Saw Catalogue

The RECORD has received from Joshua Oldham  
& Sons of the New York Saw Works, 112-132  
Twenty-sixth street, Brooklyn, their new cat-  
alogue No. 41, giving description and price list  
of their line of band, circular and inserted tooth  
saws, and various other types of saws made by  
this big saw manufacturing house. The work is  
complete and handsomely arranged and printed.  
It should be in the hands of every saw user.

Copies can be obtained by addressing Joshua Oldham & Sons, 112 Twenty-sixth street, Brooklyn, N. Y.

### A New Sander

The J. A. Fay & Egan Company, well-known woodworking machinery manufacturer, is meeting great success with its New Triple Drum Sander, which is designed to meet the highest requirements in furniture, piano and woodworking shops of all kinds where a perfect surface is wanted, either for varnishing or painting.

The most noteworthy feature on this machine is an automatic take-up device, which holds the paper tight under all working and atmospheric conditions.

The drums are made of iron and steel and are covered with specially prepared non-stretchable, combination rubber and felt, which makes a cushion for the sandpaper. The drums are designed with a device for placing the sandpaper about them and giving it the proper tension in the shortest possible time. It is said that all three of the drums can be covered with sandpaper by an ordinary mechanic in seven minutes.

On this new machine the oscillators are pivoted on a rigid shaft so that all weight is taken off the drum shafts thereby preventing wear in the drum shaft bearings.

The bed frame is made to lift by power clear of the drums. This gives easy access to the drums, which is a great advantage if in need of repairs. The opening made when the bed frame is hoisted is large enough to permit of removing the drums from the machine without disturbing the table plates. This feature is said to be found only on the Fay & Egan machine, and is clearly illustrated in the manufacturer's catalogue. Specially noteworthy is the column, which is made extremely heavy with the metal so distributed as to eliminate all vibration. The manufacturers claim it to be the heaviest and strongest column known to a sander of any make.

Feed consists of eight rolls, four top and four bottom, all powerfully geared. The lower rolls are carried in a frame, and are vertically adjustable to receive material up to 8 inches thick. The machine is made in eight sizes, 30, 36, 42, 48, 54, 60, 66 and 80 inches wide.

All the above mentioned features are fully illustrated and described in the new catalogue, a copy of which will be sent postpaid upon request to the J. A. Fay & Egan Company at 414-434 W. Front street, Cincinnati, O.

NEW NO. 225 TRIPLE DRUM SANDER.

### Lorac

The George Henke Company, 68 Beekman street, New York City, manufactures the material called Lorac, the use of which, it is alleged, will positively prevent checking, splitting and rotting of logs, ties and lumber. It is a thick, light-colored, pasty material that is applied with a brush to the ends of logs and lumber. The editor of *HARDWOOD RECORD* has seen a considerable quantity of lumber treated with Lorac, and apparently it accomplishes the results claimed for it.

Among the concerns that have used it quite extensively for a year or more are the Florence Pump & Lumber Company, Memphis, Tenn.; the Ryan-Stimson Lumber Company, Memphis, Tenn.; Penrod Walnut & Veneer Company, Kansas City, Mo., and C. C. Mengel & Bro. Company, Louisville, Ky.

The time of year is now at hand, in the southern hardwood manufacturing districts, when logs that are not sawn promptly are liable to dote and stain, and it would seem that the George Henke Company's preparation surely should be worth experimenting with. The manufacturers offer to make shipment of a quantity of the material to responsible concerns, with a guarantee that it will do everything they claim for it.

### Hardwood Flooring Cheaper Than Carpets

White Brothers, the big hardwood dealers of San Francisco, contribute the following analysis of the cost of carpets vs. oak flooring, based on San Francisco values. It must be recalled that carpet values in San Francisco are not materially different than they are in the Middle West or in the East, while, owing to excessive freight rates, oak and maple flooring prices are considerably higher.

It occurs to the *RECORD* that the argument of White Brothers is not only pertinent but indisputable. As a matter of fact, a high-class wood mosaic floor can be bought at not to exceed the cost of a first-class carpet.

"The ordinary yard of carpet is 27 inches wide by 3 feet in length. Thus a carpet yard contains only 6¾ square feet. Carpet sells from \$2 to \$9 and up per yard. A fair average for good carpet would be \$3 per yard, and that is putting it quite low for a high grade of floor covering.

"Tongued and grooved oak flooring ¾ inches thick will cost from \$1.15 to \$1.55 per carpet yard,

all laid and polished. We will take, for instance, the highest quality of clear quartered oak flooring, ¾ inches by 2-inch face. This will cost somewhere around 10 cents a square foot, or 67½ cents per carpet yard. Twenty-five per cent waste will have to be allowed for the tongue, and this will amount to 17 cents. Laying and polishing will be done by almost any floor layer for 10 cents per square foot. This will amount to 67½ cents for the labor, or a total of \$1.52 for a carpet yard of the finest clear quartered oak flooring, which will beautify any house and exhibit more taste and a greater degree of elegance than any carpet that ever was made. This is about half the price of good carpet.

"We will next take the grade of flooring known as select plain oak. A carpet yard of this, including waste for the tongue, will cost 45½ cents, and the laying and polishing, etc., 67½ cents, making a total of \$1.15 per carpet yard for a high grade handsome plain oak floor, a little more than a third of the price of good carpet. Between these two grades mentioned are two other kinds at intermediate prices.

"It is thus seen that a hardwood floor can be laid for one-half to one-third of the price of fair grade carpet, and when it is taken into consideration the extra high priced carpet which it would be necessary to lay in order to approach anywhere near the elegance of a hardwood floor, it will be seen that carpets are an expensive luxury as compared with hardwood.

"On the beauty of a hardwood floor it is unnecessary to expatiate at any length. Everyone recognizes their value and utility, but most people think that they cannot afford a hardwood floor, laboring as they do under the impression that it costs a lot of money. The lumber yards throughout the country towns should educate their customers in the understanding of the beauty, hygienic value, cheapness and general desirability of hardwood flooring."

### Expense of Training Forest Rangers

In a recent report to Congress, in response to a demand for inquiry, Secretary of Agriculture Wilson stated that the total expense to the government for the technical training for the two hundred forest rangers, who were assigned to the several western universities for courses in forestry, amounted to \$9,566.27. It is claimed that these expenses were incurred entirely without any warrant in law, and the secretary states that already measures have been taken for the recovery of this amount. Inasmuch as Gifford Pinchot was responsible for the education of the rangers, and authorized the payment of their salaries, he will undoubtedly be responsible to the government for the amount expended.

### A Remarkable Record

The substantial construction of the "Tower" edgers, which are manufactured by the Gordon Hollow Blast Grate Company of Greenville, Mich., is strikingly demonstrated by the fact that, notwithstanding the large number of them that are constantly being shipped, and the distances they are being transported, breakages in transit are unknown, while orders for repairs are confined almost entirely to those whose mills have been destroyed by fire.

### Miscellaneous Notes

The A. B. Klise Lumber Company of Sturgeon Bay, Mich., has increased its capital stock to \$200,000.

Goodman & Kennedy, manufacturers of chair seats, recently commenced business at Cincinnati, O.

The Scott Spoke Company has been incorporated at Forest, Miss., with a capital stock of \$10,000.

Justice E. Walter has recently entered the wholesale hardwood lumber business at Shawnee, Okla.

The Hawkeye Walnut Company of Winfield, Ia., has recently been organized to engage in the walnut business.

The Seale Rogers Lumber Company is a new concern at Mobile, Ala. It will carry on a manufacturing and wholesale business in yellow pine and hardwood lumber.

A new concern to enter business at Liberty, N. C., is the Liberty Picker Stick & Novelty Company, capitalized at \$25,000.

Application has been filed for the appointment of a receiver for the Tennessee Hardwood & Manufacturing Company of Memphis.

The Southern Singletree Manufacturing Company was recently organized at Gadsden, Ala., with an authorized capitalization of \$10,000.

The Laurel Fork Lumber Company of Beechwood, N. C., has been succeeded by the Haddock-France Lumber Company. This concern is a manufacturer of hardwood and hemlock lumber.

Eddy & Belhumer of Lake Linden, Mich., are billing up a lot of hardwood timber in their yards for summer sawing. The cedar and spruce will be rafted from Misery Bay after navigation opens.

The Walter N. Kelley Lumber Company of Traverse City, Mich., has been incorporated with \$10,000 capital stock. The concern formerly operated as the Kelley Lumber Company at the same city.

The Bertram-Wright Lumber Company has been incorporated under Minnesota laws, its offices to be located at Duluth. Its capital stock is placed at \$100,000. Walter Wright and Frank Strang of Marshfield are interested in the concern.

The Colored Hardwood Manufacturing Company has recently organized at Uniontown, Pa., with a capital stock of \$18,000. The incorporators are Edwin Schimpff, Robert Dunker, Jesse E. Stentz, J. G. Hemmington and M. J. Sturgiss of Uniontown.

The E. R. Newcomb Company was recently incorporated at Chicago with a \$15,000 capital. The concern will manufacture and deal in floors, veneers, wainscoting and other woodwork. The incorporators are E. R. Newcomb, H. S. Bowen and Philip S. Brown.

On March 26, fire completely destroyed the maple flooring plant of Welch & Kerry of Reed City, Mich. All the finished product on hand was consumed and sixty men were thrown out of employment. The fire originated in the dry kiln. The loss is estimated at \$50,000 and the insurance \$30,000. It is probable that the mill will be rebuilt.

The West Helena Company was recently chartered at Little Rock, Ark., with a capital stock of \$100,000. The incorporators are E. C. Horner, president, John S. and James T. Horner.

Fire recently broke out in the boiler room of the J. Kroder & H. Reubel Company's curtain pole factory, located at 53 Monitor street, Brooklyn. About \$1,000 worth of damage was done.

The American Seating Company of Racine, Wis., is making extensive improvements in its plant following the fire which recently did considerable damage at its factory. A boiler room will be constructed 46 by 50 feet, entirely of concrete and steel, and containing three new boilers. In addition to this a modern dry kiln, about 60 by 100 feet in dimensions, will be constructed.

The Kentucky Singletree & Spoke Company at Dunnville, Ky., is erecting new buildings, now almost completed, to replace those damaged by

fire which occurred at its plant the early part of February. The concern has purchased all the new machinery it will need, and it is expected the plant will be in operation by April 15. Business has been rushing for the past six months, and the fire caused the concern considerable inconvenience.

It is announced that the Cypress Point Lumber Company, which operated a saw and planing mill on Little Bayou, near Abbeyville, La., has sold all its cypress stumpage, consisting of several thousand acres, to the Baldwin Lumber Company of Baldwin, La. The transfer does not include the plant and machinery, which will probably be moved to Long Island, where there is a fine body of hardwood timber.

Sharpe & Horn, of Nashville, Tenn., a prominent firm of real estate operators, announce that they will shortly begin cutting on a tract of 4,000 acres of hardwood which they own near Atwood, Ala., on the Illinois Central railroad. The timber will be sold in the log, and the cut will consist of about 65 per cent oak, 25 per cent poplar and the rest ash and red oak. It is estimated that the timber now being cleared will total about 10,000,000 feet. There is also considerable hickory of good quality on this property.

An important deal, involving a tract of 8,000 acres of hardwood timber land, about thirty miles from Bristol, Va., has just been closed by Hon. W. Flynn of Pittsburg and associates. The purchasers will install a bandmill with a daily

capacity of 40,000 feet, and develop this property. It is estimated that the tract will cut 100,000,000 feet of merchantable timber; it is located on the East Tennessee and Western North Carolina Railway, which has both narrow and standard gauge tracks, and is a good logging proposition.

The Hermance Machine Company of Williamsport, Pa., has recently filled some important orders for its tools. Three new concerns, which begin operations during the month of April, have purchased planing mill equipment from this concern. C. H. Brosious & Co. of Sunberry, Pa., have purchased six Hermance machines. Charles E. Lewis bought an outfit of ten machines, and the Spencer Lumber Company purchased twenty-five machines. Such large sales as these speak well for the quality of the Hermance line.

The Highland Lumber Company has been organized at Ironton, O., and the following officers elected: C. A. Hutsinpillar, president; W. J. Massie, vice-president; Dr. Lester Keller, treasurer; E. F. Myers, secretary, and Jesse L. Corn, general manager. The company has purchased a fine tract of timberland in Arkansas, on the Mississippi river, and having access to the Iron Mountain division of the Union Pacific railway. The timber is of good quality and consists principally of cottonwood, oak and gum. The company will purchase a sawmill and about September 1, it is expected, Manager Corn will take up active operations.

## Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

### CHICAGO

Announcement is made that George Wilson-Jones, a young and aggressive association worker, who has been the secretary of the Retail Lumber Dealers' Association of New York during the past ten years, will come to Chicago on May 1 as chief assistant of Secretary Geo. W. Hotchkiss of the Illinois Lumber Dealers' Association. Mr. Jones' long experience in retail association work and his energy and forcefulness, will assist Mr. Hotchkiss materially in the strenuous work in which he has been engaged for so many years.

Owing to the resignation of Harry S. Adams of Chillicothe, who for ten years past has been secretary of the Ohio Association of Retail Lumber Dealers, M. A. Hayward of Columbus, O., has been appointed his successor, and has already assumed the duties of his new position. Mr. Hayward is a man of ability and will undoubtedly fill the position acceptably and with distinction to both himself and the organization.

R. S. Kellogg, who for seven years past has been assistant forester of the Forest Service, has resigned that position to accept the secretaryship of the Northern Hemlock and Hardwood Manufacturers' Association. This position was provided for at the recent meeting of the Northwestern Hemlock Manufacturers' Association and the Hardwood Manufacturers of Wisconsin, held at Milwaukee January 21, when a consolidation of the two associations was formulated. Mr. Kellogg should prove an acceptable secretary for this association, as he has had wide experience in his former work as statistician, and this will be an important feature of his duties in connection with the Wisconsin organization. Mr. Kellogg's office will be located at Wausau where President W. C. Landon resides.

W. E. Hoshall of Hoshall & McDonald Brothers, New Orleans, La., was a recent Chicago visitor.

Will Trainer of the Trainer Brothers Lumber Company, Chicago, has been taking a rest at West Baden, Ind., and is now back on his job. Chas. A. Goodman of the Goodman Lumber

Company of Marinette was a recent Chicago visitor.

E. E. Skeele of the Estabrook-Skeele Lumber Company, this city, has just moved into a handsome new residence he has built at Beverly Hills. One of the chief features of Mr. Skeele's new home is an inter-communicating telephone system, by means of which he is enabled to order his breakfast from the kitchen before he gets out of bed in the morning. Mr. Skeele thinks he is going to like the game.

Billy Greble, sales manager of the Three States Lumber Company, Memphis, Tenn., was a recent Chicago visitor.

Tom Wall, the well-known lumberman of Oshkosh, was in Chicago a couple of weeks ago, accompanied by his wife, enroute to West Baden, Ind.

Frank B. Robertson, sales manager of the Anderson-Tully Company, Memphis, Tenn., dropped into Chicago for a few days' hustling the latter part of March. The result of his visit was the placing of some very good contracts for cottonwood, oak and gum.

C. L. Willey, the big mahogany veneer man of Chicago, and large manufacturer of oak, gum and veneer at Memphis, with headquarters at Robey and Blue Island Avenue, is just back from an extended European trip. Mr. Willey was accompanied by his wife and the trip was one of combined business and pleasure. While in Liverpool Mr. Willey attended the mahogany auction sales and purchased upwards of 1,300 African and Cuban mahogany logs, which he says range higher in class than any purchases he has succeeded in making for several years. Among the quantity is a good portion of highly figured wood. He also made a considerable purchase of Circassian walnut and English oak. This stock was shipped via New Orleans and is now arriving at the big Chicago plant, and within a short time Mr. Willey will have a line of veneers in mahogany, Circassian and English oak that will be an eye opener for the piano and furniture trade.

J. S. Weidman, Jr., of Mount Pleasant, Mich., was a RECORD caller on March 30. Mr. Weidman has just made a shipment of the last car of lum-

ber from the Weidman plant, which cleans up an operation of many years' existence and one of the eminently successful ones of Michigan. Mr. Weidman left for the northern peninsula of Michigan, where he and his father are interested in several large timber properties, which eventually they will probably operate.

N. A. Gladding, vice-president and sales manager of E. C. Atkins & Co., was a welcome Chicago visitor on March 30. He was on one of his regular tours to the various branches of E. C. Atkins & Co. He reports the volume of trade in his line especially good at the present time.

John W. Blodgett, the well-known capitalist and timber man of Grand Rapids, Mich., was a RECORD caller on March 29.

A much appreciated visit was received by the RECORD on March 29 from Frank Purcell, the well-known walnut log purveyor and exporter of Kansas City. Mr. Purcell was on his way to New York on a business trip and expects to return to Kansas City about April 15.

J. W. McCausland, who has been manager of the hardwood department of W. E. Kelley & Co. for several years, has become identified with the Southwestern Lumber & Box Company of New Orleans.

W. E. Kelley & Co., 201 Railway Exchange, this city, was petitioned into bankruptcy a few days ago. George J. M. Porter was appointed receiver. From a statement of the assets and liabilities, it is fair to presume that the institution will pay out in full. This concern has been largely interested in Pacific Coast woods, and has been a large handler of these commodities for some years. A recent railroad blockade delayed shipments so that it was not able to secure delivery, and the volume of stock tied up at mills in transit has caused this temporary embarrassment. The sympathy of the entire trade is with Mr. Kelley and Allen J. Dougherty, his partner, in this financial mix-up, but as before noted, the assets are apparently ample to take care of the total indebtedness, and leave a good margin for the principals.

The RECORD was favored with a call on March 25 from W. I. Barr of Greenfield, O. Mr. Barr, in addition to operating a mill at Greenfield, is also the principal in the Barr-Holaday Lumber Company of Isola, Miss., where he produces about 6,000,000 feet of hardwoods annually, consisting of oak, ash, gum, hickory and elm.

J. C. Knox, secretary of the Michigan Hardwood Manufacturers' Association, paid his respects to the RECORD's sanctum on March 29. Mr. Knox was in Chicago securing additional evidence for the Michigan Association's case before the Interstate Commerce Commission, appealing for a reduction of freight rates from lower peninsula points to the Pacific coast.

The RECORD is indebted to Frank E. Goodwin, associate editor of "Farm Machinery" of St. Louis, for a book entitled "Cost Accounting Pathfinder." This work, although primarily written for the merchant, analyzes cost very thoroughly, and is worthy of perusal by every business man interested in knowing facts about this subject.

The Hardwood Manufacturers' Association of the United States, through its general office in the First National Bank building, Cincinnati, has just issued a new compendium of its hardwood grading rules, a volume of 130 pages. The work is very complete, and recites not only the grading rules in use by this association on all the domestic hardwoods, but also covers Cuban, Mexican and African mahogany, oak flooring, vehicle and wagon stock, dimension stock, cypress lumber, etc. The price of this volume is 15 cents, and a copy can be obtained through Lewis Doster, secretary of the association.

C. H. Ketrledge of Evanston, Ill., has been selected by the Board of Directors of the American Lumber Trades Congress as secretary of that organization to succeed A. B. Wastell of Portland, Ore., who recently resigned as secretary of the congress and also of the Oregon & Washington Lumber Manufacturers' Association. Mr. Ketrledge is well qualified to discharge the respon-

sibilities of this new position. He will take up his new duties in a few days.

A. P. Steele of the Carrier Lumber & Manufacturing Company, Sardis, Miss., was a recent visitor to the Chicago trade.

The first large lumber cargo to be received by water, for the season of 1910, arrived at the dock of the Edward Hines Lumber Company last week, from Manistee, Mich. The cargo came on the Maggie Marshall, and consisted of 500,000 feet of birch and maple.

Lewis R. Glavis, chief accuser of Secretary Ballinger in the Pinchot controversy, recently registered at the La Salle Hotel. His mission in the city is somewhat of a mystery, but it is reported that he is on his way to Alaska and intends to bring back John W. Dudley, former land office registrar, to testify at Washington.

The Fisher Furniture Company has been incorporated, with offices at 400 North May Street, for the manufacture of mission furniture.

Charles Westcott of the Hayden & Westcott Lumber Company, Railway Exchange building, has returned from a two weeks' visit to his son at Amherst College.

Rolf Thelea, who has charge of the timber-testing operations at the Madison, Wisconsin, Forest Products Laboratory, was in Chicago one day last week on business.

The G. W. Jones Lumber Company, with headquarters at Appleton, Wis., has taken out papers of incorporation at Springfield, Ill., in order to be able to operate under the laws of this state. The new incorporation involves a capitalization of \$25,000. As formerly, the offices are in the Railway Exchange building, Chicago. A. H. Ruth being in charge.

The John S. Benedict Lumber Company has incorporated under Illinois laws, with a capital of \$50,000, and will carry on the business heretofore conducted by John S. Benedict.

The new veneer and box factories of the Paepcke-Leicht Lumber Company at Greenville, Miss., are completed and are already producing daily an output of two and a half cars. The new factories are an addition to the already extensive plant operated by this concern at Greenville.

W. R. Smith of the Stearns Company, Grand Rapids, Mich., recently visited Chicago on business. There is a surprising demand for thick maple stock in that region, and prices are now \$6 higher for such stock than at this time a year ago.

T. M. Brown of the W. P. Brown & Sons Lumber Company of Louisville, Ky., was among the distinguished Chicago visitors last week.

The RECORD acknowledges receipt of a remarkably handsome catalogue, showing the line of chairs manufactured by the Kendallville Furniture Company, Peru, Ind. It is one of the handsomest furniture catalogues that has reached this office for many a day, and reflects credit on the artistic taste of the company's designer and shows to good advantage the high-class dining-chairs, rockers and mission furniture produced by this company.

The redoubtable Hon. John M. Woods, mayor of Somerville, Mass., has received an acceptance from President Taft to visit Somerville on the Fourth of July next. Probably the next "stunt" John M. will do will be to secure the next annual meeting of the National Hardwood Lumber Association at Somerville.

S. N. Perrigo, Chicago manager for E. C. Atkins & Co., reports a thriving and constantly increasing business at the local office, 28 Lake Street. From that office is handled all the Illinois trade, as well as that of Wisconsin, along certain lines, the main volume of business being with the general hardware houses. Besides band saws and circular saws of all types and for all purposes, Mr. Perrigo is responsible for the sale of veneer knives, paper-trimming knives for publishers, metal-saws, hack saws, in fact anything coming under that class of hardware, for which

this territory offers an excellent and growing demand.

G. C. Pratt of the G. C. Pratt Lumber & Tie Company recently returned from a business trip in the South, and reports having purchased several million feet of lumber. Mr. Pratt states that members of the southern trade are somewhat disappointed in the poor opening of business and in the low prices, but that as they expect good prices for the summer trade they are not unduly disturbed.

J. H. Sutthoff, active head of the Insular Lumber Company, exploiters and dealers in Philippine mahogany, was a recent visitor to Chicago, enroute to the company's western office. Mr. Sutthoff states that there is already a fine trade in Philippine mahogany along the Pacific coast, and that most of the wood is used for interior finish and sells for as much as \$100 and \$110.

Wm. Jones, president of the Jones-Woolfolk Company, Lexington, Tenn., has been in Chicago for several days booking orders for his concern. An encouraging business is reported in that section of the country and prices have remained firm.

Secretary McMullen announces that the next meeting of the Chicago Hardwood Exchange will take place at the La Salle Hotel, on April 23.

F. L. Brown of Crandall & Brown left April 6 for a two weeks' trip through the South. He will be back about the 20th.

Among the welcome callers at the RECORD office during the past week were D. E. Kline of the well-known Louisville Veneer Mills, Louisville, Ky., manufacturer of veneer, panels and thin lumber, and Burdiss Anderson of the Great Lakes Veneer Company, Munising, Mich., specialist in fancy birch and maple veneers.

The RECORD is in receipt of a notice from the B. Heinemann Lumber Company of Antigo and Wausau, Wis., stating that a fire in the plant of a corporation of a name similar to theirs has resulted in the report that this company has suffered from a fire loss. The B. Heinemann Lumber Company has had no fire and its plant is in daily operation with a good stock of lumber on hand.

The Keith Lumber Company is opening up a new yard at Loomis and 22d street, to receive northern hardwoods. As yet no dock facilities have been provided.

H. H. Hettler of the Herman Hettler Lumber Company returned from a pleasure trip to Florida on April 9. Mr. Hettler has been enjoying some very exciting and successful tarpon fishing on the Florida coast.

The Belton Lumber Company is a new Chicago institution, which engaged in the hardwood business on March 15 last. Edwin F. Moore is president and treasurer and Walter F. Clark is secretary. The office is located at 512 Union Bank building, 115 Dearborn street. C. L. Wallace is the company's buyer and salesman.

## NEW YORK

Secretary Lewis Doster of the Hardwood Manufacturers' Association, headquarters Cincinnati, O., spent several days in town the past week. He brought with him good reports of the hardwood manufacturing trade.

There has been a great deal of activity among the local lumber trade in connection with the threatened application of the maximum clause of the present tariff law against Canada, but which event, it has just been announced, has been happily averted. Had the maximum clause gone into effect it would have practically made the importation of Canadian lumber of all kinds impossible. Headed by Colonel W. M. Cromble and Van W. Tyler, a big delegation of lumbermen waited on Secretary Knox at Washington on March 23, at which time the lumbermen's cause was ably presented by Governor Prouty of Vermont, L. P. Graves of Buffalo and F. E. Parker of Saginaw. The delegation received considerable assurances and, as is well known,

and finally, and  
the popular purchasing agent  
of the New York Lumber Company, headquarters  
at New York City, selected his position to join  
the E. S. Morse of the E. S. Morse  
Lumber Company, Springfield, Mass. He will  
become secretary and assistant manager of this  
company, thereby permitting Mr. Morse to de-  
voted more attention to his large interests in  
Canada and locally.

A most important lumber-railroad case has  
been won in the appellate division of the  
supreme court of the state of New York here  
by the Welch Lumber Company, large hardwood  
operators of Welch, W. Va., against the Nor-  
folk & Western Railroad. The case was based  
on the clause of the Interstate Commerce Act  
which provides that where a car routed over  
several different roads is lost in transit the  
owner may bring suit to recover against the  
railroad issuing the bill of lading irrespective  
of whether it was lost on its line or not. The  
Welch Lumber Company suffered such a loss  
and sued the Norfolk & Western as the originat-  
ing road. The case has been fought through  
three courts and it is now understood will be  
appealed to the supreme court at Washington.

A petition in bankruptcy has been filed  
against F. Mohr & Co., large furniture manu-  
facturers, with factory at 507-11 West Thirty-  
second street, Manhattan. Henry Melville has  
been appointed receiver with bond of \$5,000.  
The liabilities are estimated at \$125,000, and  
the assets \$60,000.

Two fires in Brooklyn on the morning of  
March 31 destroyed the large planing and saw-  
mill of C. H. Pierson, 187 Wallabout street, en-  
tailing a loss of \$40,000, and the box factory  
of J. J. Brunley, 75 Grand avenue, entailing a  
loss of \$10,000.

James Gilson, for many years with the Dodge  
& Bliss Company, West End, Jersey City, has  
severed his connection to join forces with the  
large Jersey City firm of Vanderbeek & Sons.

D. C. Cummings, who so ably represented  
the Louisiana Red Cypress Company, New Or-  
leans, La., in the New England markets for  
several years past, has resigned to join forces  
with the Hoban-Hunter-Feitner Company, the  
well-known wholesale cypress house of this city,  
which he will represent in the New England  
trade. The concern's new wholesale distribut-  
ing yard in Brooklyn is fast getting into shape  
and large quantities of cypress are arriving.  
On May 1 the company will transfer its office  
to the new yard at Chapman's Docks, Newtown  
Creek, Brooklyn. M. J. E. Hoban of the com-  
pany just returned from a lengthy business trip  
to southern mill points.

E. L. Edwards, prominent hardwood lumber-  
man of Dayton and Cincinnati, O., was here  
during the fortnight in the interest of business.

John Fleming, well-known sales representa-  
tive and for many years past associated with  
the Wiley-Harker Lumber Company, has resigned  
to associate himself in a selling capacity with  
the Doscher-Garner Company, large cypress  
house of 11 Broadway, whom he will represent  
in the Metropolitan district, Philadelphia and  
sound points.

C. E. Kennedy, for many years local repre-  
sentative of the Shepard & Morse Lumber Com-  
pany of Boston, and who for the past two years  
has been successfully operating on his own ac-  
count in the wholesale trade with office at 18  
Broadway, has won a European trip as the  
most popular member of the Knights of Colum-  
bus, a large Catholic organization. Mr. Ken-  
nedy won out over his nearest competitor by  
7,000 votes, receiving a total vote of 122,500.  
His trip to Europe begins July 19 and will in-  
clude visits to all the leading cities as well as an  
audience with the Pope at Rome.

R. W. Higbie of the R. W. Higbie Company,  
wholesale hardwoods, 45 Broadway, has just  
returned from a visit to his hardwood manufac-

turing operations at Newton Falls, N. Y. Every-  
thing is going on in fine shape and Mr. Higbie  
expects to have a choice line of lumber for  
distribution this year.

H. C. Turlier has opened an office at 1 Mad-  
ison avenue, Manhattan, where he will conduct  
a wholesale lumber business as sales agent for  
the Newbern Box Company and the Mills-Camp-  
bell Lumber Company of Newbern, N. C.

Waldron Williams of I. T. Williams & Sons,  
prominent hardwood house, returned last week  
from a pleasure trip with Mrs. Williams to  
Bernada.

Another returning pilgrim was President Rus-  
sell J. Perrine of the New York Lumber Trade  
Association, accompanied by his family from a  
thirty-day tour of the Windward Islands.

A. J. Auger of Auger & Son, Quebec, Can.,  
was here for several days before sailing for  
Europe on March 25 on a business and pleasure  
trip.

Among other visitors noted were George A.  
Holt, American Lumber Company, Oconto, Wis.;  
Harvey M. Dickson, Dickson Lumber Company,  
Norfolk, Va.; A. B. Cramer, Suffolk, Va.; S. C.  
Major, Major & Loomis Lumber Company, Hert-  
ford, N. C., and Lewis Dill, Lewis Dill & Co.,  
Baltimore, Md.

R. H. Downman, large cypress manufacturer  
of New Orleans, was a visitor in town during  
the fortnight in the interest of business.

C. L. Willey, prominent veneer and hardwood  
lumberman of Chicago, arrived here recently  
from a three months' European trip accompa-  
nied by Mrs. Willey, and left immediately for  
Chicago.

Stuart D. Walker of Gouverneur E. Smith &  
Co., the well-known wholesalers of 17 Battery  
Place, is the recipient of congratulations from  
his friends on the arrival of a daughter, born  
on March 19. This is Mr. Walker's first born,  
and he is so delighted with the arrival that it  
is very likely that the increasing of his family  
host will become a habit with him.

## PHILADELPHIA

The Wholesale Lumber Dealers' Association  
recently sent delegates to appear before Secre-  
tary of State Knox at Washington, D. C., at a  
hearing of the various business interests, pro-  
testing against the application of the maximum  
tariff, which was to go into effect on April 1  
and which was regarded as unjust discrimina-  
tion against this country. The outcome of the  
hearing resulted in a minimum instead of a  
maximum tariff being applied.

W. A. Reed reports encouraging improvement  
in trading during the last fortnight. The labor  
agitation, naturally, has had a bad effect on  
business, but the outlook grows more favorable  
daily.

Frederick S. Underhill of Wistar, Underhill  
& Co. says the last two weeks have shown a  
bolder activity in trading than for some time  
past. R. W. Wistar is on an extended trip  
through the South; will stop at Pinchurst, N.  
C., on his way. S. N. Nixon, also of this firm,  
has just returned from a six weeks' tour of  
New York state and reports a gratifying buoy-  
ancy as to business prospects all along the  
line.

H. B. Tomb of the Tomb Lumber Company  
states that orders are more liberal and the  
outlook gives confidence. W. A. Tomb spends  
most of his time at the company's mill at  
Watoga, W. Va. W. N. Lawton, sales manager,  
has just returned from a buying trip in North  
Carolina.

J. C. Tennant, secretary and sales manager,  
Fenwick Lumber Company, reports more orders  
coming in than the company can fill with the  
dispatch it would like, owing to depleted stocks  
at mills, of the desired hardwoods. Mr. Ten-  
nant has returned from a recent trip to the  
company's New York mills.

A. S. McGaughan, who makes a specialty of

maple flooring, says trading is about fair, with  
perhaps some improvement during last fort-  
night. He is hopeful of a livelier pace as the  
spring advances.

Fear that the town of Cross Fork, Pa., would  
be wiped from the map because the big saw-  
mill of the Lackawanna Lumber Company, the  
main industry of the town, had cut its last log.  
has been dispelled by the news that the town  
is to have a new lease of life, good for at least  
ten years. The Central Lumber Company of  
Pennsylvania has purchased the hardwood left  
on the vast tracts, from which the hemlock was  
cut by the Goodyear Lumber Company in this  
section, and the old Lackawanna mill in this  
place is to be repaired for cutting this wood.  
Still more good news is to the effect that if  
the Central company rehabilitates the old mill,  
the Penn Tanning Company will also begin  
cutting on 100,000,000 feet of hemlock it owns  
at the headwaters of Kettle creek and the logs  
will be brought to Cross Fork for sawing.  
The Central Pennsylvania Lumber Company's  
purchase of the hardwood on the Goodyear  
land is considered a unique "cleanup" job in  
the history of Pennsylvania lumbering. The  
timber consists mostly of cherry, beech and  
maple, and much of it has come to fruition since  
twenty years ago, when the Goodyear interests  
began to cut in this section. Of late some of  
the wood has been used for staves, but the  
demand for fine furniture woods is becoming so  
great that this timber is not to go for staves any  
longer, at least the choicest parts of it.

In contrast to the talk of business depres-  
sion, a Philadelphia manufacturer makes the  
following statement: "We have a full year's  
work on hand and are employing 1,500 more  
men than at this time a year ago. The Janu-  
ary and February output exceeded three times  
the same period in 1909.

Orders for 120 locomotives have been received  
recently by the Baldwin Locomotive Works, 90  
from the Southern Railway and 30 from other  
corporations. These contracts foot up about  
\$2,000,000. The works employ 11,000 men, and  
an increase, which will reach 16,000, is expected  
before the summer is over.

John Balbinie and William R. Waters were  
appointed receivers of the bankrupt estate of  
Knowlton & Co., chair manufacturers of this  
city. Security was fixed in the sum of \$10,000.

On April 1 fire which began in the lumber  
yard of A. S. Heck, Galen, Pa., destroying 200-  
000 feet of lumber, spread to the lumber yard  
of George Miller and burnt up 100,000 feet of  
lumber, then continued into the second-growth  
timber in and beyond the Nelson Run district,  
where it is still burning and consuming some  
of the most promising second-growth timber in  
Pennsylvania. A loss estimated at \$200,000  
has already been suffered, it is reported.

Martin Sunk, a wagon builder of Wissahickon,  
died on March 20. He was in the wagon build-  
ing business for many years. He was a veteran  
of the civil war, serving in the Twenty-third  
regiment, Pennsylvania volunteers.

Kittanning Automobile Company, Kittanning,  
obtained a charter on March 24; capital, \$5,000.

Recent visitors to the local trade are J. F.  
Henderson of Henderson Lumber Company,  
Pittsburg, Pa.; Oscar H. Babcock of E. V. Bab-  
cock & Co., Pittsburg, Pa.; A. B. Cramer, Vir-  
ginia, and C. S. Wetherill, Doylestown, Pa.

Samuel Roberts of Morristown, Pa., has just  
returned from a business trip to Evergreen, N. C.

## PITTSBURG

H. Clark & Son of Union City, Pa., have bought  
a nice tract of hardwood at Waterford, Pa., and  
are putting in machinery preparatory to starting  
operations on May 1.

The Flint, Erving & Stoner Company is getting  
the affairs of the newly organized Progress Lum-  
ber Company at Stoner, Miss., well managed.

The newly elected officers are: President, J. B. Flint; vice-president, E. H. Stoner, both of this city, and secretary and treasurer, C. H. Armbricht of Hattiesburg, Miss.

The Breitwieser & Wilson Company has applied for a Pennsylvania charter. Its members, Albert G. Breitwieser, William W. Wilson, Jr., and William J. Harrington, all of Pittsburg, have been doing business since January 1 as the Breitwieser & Wilson Company. They are now located in handsome offices in the new Oliver building.

Ex-Senator William Flinn of Pittsburg and sons have bought 8,000 acres of virgin forest land near Hampton, Carter county, Tennessee. They will install a band sawmill at once and arrange to cut 50,000 feet per day. The tract is said to hold 100,000,000 feet of marketable lumber and the branch lines of the E. T. and M. N. C. Railroad Company will be built from Hampton eight miles into the tract.

W. P. Craig, president of the W. P. Craig Lumber Company, returned from a stay in Philadelphia. He says that plants there are running nearly full and that no visible bad effects of the strike are manifest at present.

The Bessemer & Lake Erie Railroad Company is making arrangements to take care of the biggest business in its history. This is the main coal and ore carrying road between Pittsburg and the lakes and its plans at present show that it believes there will be a big summer's business in all lines.

The Germain Company announces that export trade is still pretty slow. Demand for timbers in the East has been more encouraging of late and the only complaint it has to make is that the margin of profit on business is very much smaller than formerly.

I. F. Balsley, sales manager of the Palmer & Semans Lumber Company, is now welcoming his many friends to the fourteenth floor of the new Oliver building, where the company has as fine offices as can be found in the city. Several salesmen have been put on this month to cover Ohio and Pennsylvania territory and the prospects for the new company are very good.

Herman and John Williams of Meadville, Pa., recently bought the plant of the L. F. Smith Lumber Company at that place and will continue the planing and lumber mill operations on a larger scale.

The Interior Lumber Company is getting its stocks of northern Pennsylvania lumber well shaped up for early summer delivery. Manager J. G. Criste lately paid a visit to the mills and is well satisfied with the progress made in cutting.

J. N. Woollett, president of the Aberdeen Lumber Company, has recovered from his recent attack of grip and is back at his desk hustling for business. He recently added to his force of salesmen H. M. Jackson, who was formerly with the Crescent Lumber Company of this city, who will cover the Pittsburg territory.

The active management of the A. G. Breitwieser Lumber Company, one of the largest retail concerns in western Pennsylvania, has been turned over by Mr. Breitwieser to W. H. Williams and F. Keeling, who are respectively vice-president and secretary. Mr. Breitwieser still retains his office as president but will devote all his energies to his new wholesale company.

Pittsburg's March building report shows that no permits were issued for costly structures this month. Three hundred and fifty-seven permits were granted for building operations to cost \$853,052. This is a decrease of about \$200,000, compared with March, 1909. This falling off is largely attributed to the very bad weather which prevailed most of the month.

President Nelson E. Bell of the Furnace Run Sawmill & Lumber Company is very hopeful of the spring market. He finds a strong tone to the hardwood trade in general and believes that with a reasonable amount of hustling this year is going to make a good record.

President W. D. Johnston of the American Lumber & Manufacturing Company is gaining

faith in the hardwood market every month. He has started one of the American's big hardwood plants in North Carolina, which is cutting lumber chiefly for the North Carolina furniture trade.

The H. V. Curll Lumber Company is very strong on poplar. Mr. Curll has made several recent inspections of poplar stocks in West Virginia and finds that everything there indicates a close shortage and that the mills here are overloaded with orders.

The Mead & Speer Lumber Company is very busy at its plant at Strange Creek, W. Va., where it is turning out some especially fine hardwood stock. The company has had a splendid trade all the year in Ohio and the Middle West. Much of this lumber goes to the manufacturing trade.

This spring the old-time Allegheny river trade has been much in evidence. The cut of logs up the river was especially large last winter and several big floats have come down since March 1.

H. T. and J. A. Newell of the Newell Brothers Lumber Company have been down at their mill in West Virginia the past week taking a careful count of the stocks. They have all the business they can attend to at present and are greatly encouraged over the demand from the East for good hardwoods.

J. J. Linehan of the Linehan Lumber Company is back home once more after a long absence in the East. He reports trade much better in that locality, but says that it costs lots of money to get business and that everybody is hustling to the limit.

The Railroad & Car Material Company has moved from 1010 Bessemer building to larger quarters on the sixth floor of the same building. It is getting a nice business in hardwood timbers and general railroad stock.

The Webster-Keasey Lumber Company, which has been cutting a large amount of hardwood in Butler and Indiana counties this year, has recently bought another tract of oak in the former county and will put in a mill to cut it off at once. It has made some excellent sales to trolley companies this spring and also has sold a large amount of lumber for government contracting work.

William R. Cornelius, a well-known young hardwood dealer of 712 Bessemer building, is pulling out stakes in Pittsburg and will move his business in Cincinnati May 1. He is at present quartered temporarily in the First National Bank building in that city, but is building a fine office for his business at Bridgetown.

Secretary J. H. Henderson of the Kendall Lumber Company announces that trade is booming. The company's mining business is especially good. All its mills are running full and it is likely that a night shift will be put on at Crullin, Md., and also at its Croft plant very soon.

A. B. Neill of the McDonald Lumber Company recently came up from May, W. Va., for a look at Pittsburg. His company is cutting 60,000 feet a day and shipping much of this lumber to the East.

Lumber dealers of Alliance and Youngstown, Ohio, predict the biggest business for those two cities this summer of any year in their history. Robert Jacobs of the Jacobs Lumber Company of Youngstown is especially enthused over the prospects in his city where the steel industries are spending millions this summer for new plants.

Pittsburg is showing a great improvement in house building the past month. The yards are beginning to feel this increase in contracting trade, but still have good stocks of lumber on hand.

The Emporium Lumber Company, whose plant at Galeson, Pa., was recently burned, has started to rebuild and will soon have a larger plant than before, which will be devoted chiefly to the flooring business.

N. H., on March 18, the following officers were elected for the coming year: Warren Tripp, president; Charles A. Robie, vice-president, and L. Ashton Thorpe, secretary and treasurer. The board of directors includes: James B. Tennant, S. D. Felker, Milton Read, Frank R. Clark and Charles A. Bailey.

The committee on mercantile affairs of the Massachusetts state legislature recently mailed notices to several lumber dealers calling attention to a bill entitled "An act to provide for additional surveyors of lumber and to define and extend their duties." This caused considerable comment among dealers and resulted in a joint meeting of the executive committee of the Massachusetts Wholesale Lumber Association and the Lumber Trade Club of Boston, representing the retail dealers of this city and vicinity. At this meeting resolutions were framed up protesting against the passing of the proposed bill. The quick action taken by the lumbermen resulted in the committee recommending that the originator of the act be allowed to withdraw the same.

Benjamin O. Brown, of the firm of Ballou & McColey, chair manufacturers, Winchendon, Mass., recently stated that his concern will build another shop at its plant. The present buildings are not large enough to accommodate its business. About sixty hands are now employed, but it is planned to increase this number. The new shop will be a wooden structure, 120x40 feet, two stories high, with all modern equipment and conveniences.

The Southern Railway has withdrawn its order which practically prohibited the diverting of cars at stopover points, which had passed over the entire line of the road or over it in part. This ruling on the railroad's part was considered very unfair and unjust, and when the matter was brought plainly before the officials they evidently saw the error of their judgment and withdrew it.

C. E. White of the Tennessee Lumber Company has recently returned to Hartford, Conn., from a trip to Tennessee. The company is busy constructing a railroad from its timber lands to the main line. At the present time about 100 men are employed.

The Blair Veneer Company at North Troy, Vt., has been installing a new hot air blast drying apparatus. Because of this an extension tower had to be erected.

The Simonds Manufacturing Company, one of the largest saw manufacturing concerns in the world, has purchased the buildings of the Simonds Rolling Machine Company, adjoining its present plant in Fitchburg, Mass. The company proposes to manufacture all of its handles and frames in the new property. The handle and frame business which has been conducted at Arlington, Vt., will be removed to Fitchburg.

Frederic McQuesten of the George McQuesten Company, lumber dealers, Boston, is making a trip around the world accompanied by his wife. They have been spending some time in Ceylon and are now on their way to Naples.

Miss Dorothea Davenport, daughter of Mr. and Mrs. George Davenport of Boston, was united in marriage Monday, March 28, at noon, to William Truman Aldrich, son of Senator Aldrich. The ceremony was performed at Trinity Church and a wedding breakfast was served at the home of the bride. Mr. Davenport is of the Davenport-Peters Company, a prominent lumber concern of this city. Among the distinguished guests present were U. S. Senator Aldrich, John D. Rockefeller, Jr., and Governor and Mrs. Draper.

## BALTIMORE

The managing committee of the Baltimore Lumber Exchange, at its monthly meeting April 4, received a report from the committee named at the annual meeting in December to take up the relations between the wholesalers and the

## BOSTON

At the annual meeting of the New Hampshire Lumbermen's Association, held at Manchester,

and to devise some plan, if possible, to bring the operations of the scalpers, who are selling direct to consumers at nominal margins and demoralizing the trade. Messrs. Matthews and Duffy appeared before the committee and submitted a statement, and President John L. Alcock was authorized to take further action. A lot of routine business was also disposed of.

The wife of J. M. D. Heald of the hardwood firm of Price & Heald was suddenly stricken with appendicitis, while she was on a visit to relatives in Lynchburg last week, and an operation had to be performed without delay. For a time she was in a very precarious condition, but now the patient is believed to be on the road to early recovery. Mr. Heald went down to Lynchburg as soon as he got news of the nature of Mrs. Heald's illness.

Robert McLean, general manager of the Norva Land & Lumber Company, with main offices Norfolk, sailed on the steamer Mauretania for Liverpool March 24, but will return about April 15. He went to look after some business matters which required his personal attention and it was his purpose to stay in Liverpool the entire time during which he is on the other side of the Atlantic. Business at the company's mill at Wallacetown, Va., is reported to be very active, the demand being good and prices sufficiently attractive to cause the plant to be operated at its maximum capacity.

One of the Baltimore hardwood men who takes a most hopeful view of the situation is George A. Munroe of the wholesale firm of Munroe & Co., Keyser building. He says the East is buying lumber with considerable freedom and that business with his firm has been very good. At the present time, he said, while the prices on some stocks were rather higher than they ought to be to insure an active movement, the offerings by the manufacturers were sufficiently free to afford some competition.

W. L. Clement, president of the W. L. Clement Lumber Company of Greensboro, N. C., was in Baltimore last week to undergo a slight surgical operation, which is said to have been entirely successful. It kept Mr. Clement here for only a few days. He stated that the demand for hardwoods continued good and that the prospect was encouraging. Mr. Clement is one of the largest millmen in that section and prominent in the trade.

A meeting of the Uniform Bill of Lading Association, in which the lumber trade, especially in hardwoods, and other shippers are largely interested, was held in New York March 23. President Harvey M. Dickson, of the Dickson Lumber Company, Norfolk, who is also the chief executive of the Bill of Lading Association, occupied the chair, and E. M. Terry was secretary. The committee named to draft a form of a bill made its report, and the result of its work was extensively discussed. It was resolved to have copies of the draft printed and send them out to the members for consideration, so that they will be prepared to act with full knowledge of the subject at the annual meeting of the organization on the fourth Wednesday in May in New York. Mr. Terry was elected permanent secretary.

Charles O. Hughes of Alfred Dobell & Co., the well-known Liverpool firm, was a recent visitor here. Mr. Hughes saw various hardwood exporters here and also took dinner with Richard W. Price of Price & Heald. It was his intention to go South and give special attention to pitch pine.

Another foreign visitor was G. Higford Smith, representing Alfred Beling of Antwerp. He was on his way to make an extended tour of the lumbering sections.

Charles A. Buchanan has succeeded A. Harvey McCay in charge of the Baltimore office of William Whitmer & Son of Philadelphia. Mr. Buchanan has been engaged in the wholesale hardwood business here for some time past and is thoroughly familiar with the trade.

Paul W. Fleck of the wholesale firm of Fleck & Dunwoody of Philadelphia, was in Baltimore week before last and saw some of the hardwood men here. He stated his belief that trade was picking up and that the movement was showing a decided increase, with prices very firm and, in some instances, high.

R. E. Wood, president of the R. E. Wood Lumber Company, is on a trip of inspection to the various mills of the company in West Virginia, Tennessee and North Carolina, which will keep him away from the office for about ten days or two weeks.

## CINCINNATI

The sawmill and veneer plant of Malcy, Thompson & Moffett, on the west side of the city, is running full, with the log yard well supplied with selected oak logs, which are being manufactured into flitches where possible to secure attractive figures, and which are being cut into sliced and sawed veneers. The warehouses contain a large stock of veneers ready for the market, and there is a good demand for all manufactured. This company also operates a large mahogany mill on the Island of Cuba, near Havana, where it manufactures Cuban mahogany lumber and flitches. Business is showing some improvement, and it is expected that there will be plenty of increase as the year progresses.

The Ohio Valley Exposition is now getting its affairs in shape for the exposition to open in this city in August and September. Col. Stanberry of the Chicago Coal & Lumber Company is a member of the commissioners, and has been placed in charge of the Division of Forestry and Lumber Products, and is hard at work arranging for an effective lumber exhibit.

Harry Brown, the prize bowler of the Lumbermen's Club of Cincinnati, is seeking for more worlds to conquer since his team has vanquished the bowlers of the furniture trade.

March showed much activity in the railroad division of the lumber industry at this point, according to the figures of Superintendent Chas. Murray of the Chamber of Commerce. The receipts for March were 7,829 cars, as compared with 5,929 for the same month last year, while the shipments were 6,711 cars, against 5,977 cars for the same month in 1903.

The mahogany mill of the Freiberg Lumber Company is active, and is specializing in mahogany lumber and flitches, which is cut into sawed veneers at the plant. At this plant can be seen what is said to be the largest stock of Mexican mahogany lumber ever in Cincinnati.

John Dulweber & Co. are adding to their new yard opposite the Southern freight station on McLean avenue, where they have an immense stock of hardwoods, the overflow of the main yard at Findlay street. Three of the Dulwebers are now active in the operation of this plant — B. F., J. Ed. and John Dulweber. "Ed." Dulweber, as he is familiarly known, was formerly with the branch of the Nicola, Stone & Meyers Company, but recently has become connected with his brother.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, returned Monday from a two-weeks' stay at the office of the association in New York City. During his absence Executive Clerk Heaton and his assistants received the edition of the new grading and inspection rules of the association and mailed a number to members and consumers. There is an expression of general satisfaction with the new rules by those who have received the copies, while there are those who say that the rules are nearer the idea of rules that may be accepted as universal than any which have yet been issued. The manufacturers of the Queen City Furniture Club, at the meeting of the club on Wednesday, April 6, instructed its secretary to transmit to the Hardwood Manufacturers their thanks for the copies that have been presented

for their inspection, and express the hope that the work of bringing the producer and the consumer into more confidential relations will continue.

R. E. Becker, former representative of the Talge Mahogany Company and several other manufacturing concerns, and more recently with Malcy, Thompson & Moffett, is again seeking new fields of usefulness.

Charles F. Shiels, the candidate for treasurer on the Independent Ticket of the Lumbermen's Club of Cincinnati, is the son of one of the oldest lumber merchants in the Middle West, and who owned and operated a sawmill on the river front at Cincinnati, at a point which is now the river end of Plum street. This was away back in the thirties. The present firm, C. F. Shiels & Bro., have been operating a hardwood yard at the corner of Gest and McLean for many years, making a specialty of wagon makers' and furniture manufacturers' stock. Mr. Shiels says he has enjoyed a very good volume of trade all through March, though there has been much complaint by others as to conditions. He is a thorough lumberman, and takes great care of the lumber in stick in his yards, shielding it from the weather and piling and arranging it so as to secure the best results.

Fred Duling of the Graham Lumber Company returned last week from an extended trip through the Middle West and South, and reports a very successful trip.

The M. R. Short Lumber Company is a recent addition to the lumber directory of Cincinnati. The offices are located in the Mercantile Library building. Mr. Short was formerly connected with the Dwight Hinckley Lumber Company and is noted as a hustler for business. He is the short-stop of the Lumbermen's Club baseball team. The new concern will specialize in cypress and yellow pine.

The Tennessee Coal & Lumber Company has opened a suite of offices in the Provident Bank building at Seventh and Vine. The Asher Lumber Company of Cincinnati has its business office in this building since the first of April.

## INDIANAPOLIS

John J. Valdenaire has organized the Maple Grove Realty Company and will combine real estate with his lumber business.

The Interior Hardwood Company has joined the Indianapolis Trade Association which now has two hundred and fifty members.

A petition asking for an investigation of alleged discrimination in rates for electric current has been filed with the board of public works by the Burnett-Lewis Lumber Company.

There are fourteen concerns dealing in and manufacturing hardwoods in the city, according to the city directory just issued for 1910.

The Ford & Johnson Company of Michigan City have been awarded a contract for making all of the furniture that is to go into the new state capitol at Pierre, S. D.

The Wickes Refrigerator Company has been organized at Elkhart to manufacture refrigerators. The company has been incorporated at \$50,000 by Bert D. Houseworth, Joseph Maurer and Lorenzo D. Hall.

All previous building records for the city were broken last month when 755 permits, representing a total valuation of \$1,026,399, were issued. Last March there were 514 permits issued, amounting to \$693,275. Permits issued for the first three months of this year have exceeded those of the corresponding period of last year by \$455,000.

## EVANSVILLE

James E. Rankin, Jr., of the Rankin Lumber Company of Henderson, Ky., has just returned much improved in health from Chicago where he has been ill for the past two weeks.

Bedna Young and F. M. Cutsinger of Young & Cutsinger made a flying business trip to Indianapolis last week.

Maley & Wertz of this city have decided to build on the site of their plant which was destroyed by fire recently. Work has already begun on the new plant which will be finished and put in operation as soon as possible, as they have a large stock of logs on the railroads ready to be shipped. A first class plant will be erected. It will be about sixty days before they can resume operations at this point.

D. R. Webb, the well-known veneer man of Edinburg, Ind., was in town recently.

The Big Four Railroad Company is building a line from this city to Mt. Carmel, Ill. Work has been progressing rapidly for the past two weeks as it is planned to have the road in operation by November 1.

W. O. Anderson and B. B. Beverley have sold their interest in the Anderson Box Company at Henderson, Ky., to Charles E. Dallam, who is now sole owner of the plant. There will be no change in the name of the company. Mr. Anderson, who will remain manager, announces he will start the factory running night and day at once.

W. H. Coppock of S. P. Coppock & Sons Lumber Company, Fort Wayne, Ind., was in the city this week. Mr. Coppock was well pleased with prospects for trade, also with present business. He is in charge of the company's yard at Orleans, Ind.

The Union Lumber Company of Rothwell, Ky., has been purchased by W. Russell Tabor, S. S. Pinney and R. G. Lyons of Mt. Sterling, Ky., including timber holdings. The deal involved about \$20,000.

Edward Meyers of Smith, Meyers & Schnier Company, Cincinnati, the well-known machinery house, was in town this week. Mr. Meyers says his firm is enjoying an excellent business.

The new plant of the Evansville Veneer Company, located at Jackson, Tenn., has been put in operation, the rotary saws and the saw mill and slicer will be started within a few days. C. W. Talge is in Jackson superintending the work. The company is anxious to get started as it has an enormous stock of fine logs to be worked up.

Frank Storton, formerly auditor of the Evansville Railway Company, has resigned his position to go with the Mossman Lumber Company, formerly of this city, which is erecting a large band mill in Memphis. Frank Snepp, formerly of Maley, Wertz & Snepp of Vincennes, Ind., and later with the Kentucky Veneer Works, Louisville, Ky., has also resigned his position to go with the Mossman Lumber Company.

## CLEVELAND

Cleveland lumbermen are feeling good natured just now over the announcement from Washington that the pending tariff war between Canada and the United States will not materialize, an agreement having been reached whereby certain concessions are made by the Dominion, in return for which the United States will not enforce the maximum tariff as provided in the Payne-Aldrich bill. Many Cleveland lumbermen would have been seriously handicapped had such a thing come to pass, for large areas of timber lands across the boundary line are owned by Cleveland firms or their lumber contracted for. Two-thirds of the lumber boats operating out of Cleveland would probably have been put out of business had the high tariff schedule been enforced against Canadian lumber.

Although navigation will not have its formal opening until April 15, a number of boats have already made short trips between Lake Erie ports and the passenger boats are operating between Cleveland and Detroit. The lumber carriers expect to do a big business in all lines of lumber this year, as building operations in this territory promise to exceed all former records.

A fire which did about \$18,000 worth of damage threatened the total destruction of the plant of the American Box Company and of the factory of William Zeitz, hardwood finishers, March 28. It started early in the morning on the roof in the rear of the American Box Company's plant and spread to neighboring buildings. Its origin is unknown. About \$14,000 damage was done to the box company's plant and \$4,000 to the Zeitz factory. The entire loss was covered by insurance.

S. E. Putnam was one Cleveland lumberman who was greatly interested in the Canadian tariff. Mr. Putnam has just returned from Ontario where he viewed several properties in which he is interested. His company has sufficient stock in Canada to run it twelve years under normal conditions.

Four mills of the Advance Lumber Company, which has its headquarters in this city, are operating full time, turning out stock which has been sold in advance of the making. The company reports an unusually heavy call for high grades of hardwoods.

W. B. Martin of the Martin-Barriss Company reports that the concern's big hardwood mill here is extremely busy at this time. Some good shipments of African mahogany are being received, also some finely grained Circassian walnut logs. This wood is coming in for especial favor for store window trimmings. It is also to be used throughout the new federal buildings in important offices for trim and furniture.

Henry Wiborg of the Wiborg & Hanna Company of Cincinnati, a prominent hardwood manufacturer, and Albert Schafer of the C. D. Benedict Lumber Company of Peoria, Ill., were callers on the local trade during the past week.

Trade with the lumber yards in the smaller towns throughout the state is increasing rapidly, according to F. T. Peitch. The roads are in good shape after a warm dry March and rural building is in full swing. There is a strong call for hardwoods and cypress.

## COLUMBUS

Building operations in Columbus during the month of March were in excess of those of March of the previous year, both in the number of permits issued and in the estimated valuation of the structures projected. During March, 1910, permits to the number of 291 were issued for buildings estimated to cost \$785,799. In March, 1909, the number of permits were 237, and the valuation of the projected buildings, \$636,768.

Papers were filed with the secretary of state decreasing the capital stock of the Dover Lumber Company of Canal Dover, Ohio, from \$200,000 to \$10,000. The number of shares remains the same, but the par value is decreased from \$100 to \$5. O. S. Welty is president and P. S. Cooper, secretary.

The engagement is announced of Benjamin Hayward, son of M. A. Hayward, 51 Jefferson avenue, and a member of the jobbing firm of M. A. Hayward & Sons, to Miss Ruth Garver, daughter of Mr. and Mrs. A. R. Garver of Tippecanoe City.

The Sowers-Leach Lumber Company has discontinued the retail business and is now devoting its entire attention to the wholesale trade both in yellow pine and hardwoods. The office will remain on Neilson street, where the yard was formerly operated. John K. Sowers is at the head of the concern.

Giles Wright, president of the Wright-Saulsberry Lumber Company of Ashland, Ky., called on a number of Columbus lumbermen recently.

A. C. Davis reports a steady trade in hardwoods. He believes that the industrial upheavals such as strikes are having a bad effect on the retail trade. He says the low grades are still slow. George B. Johnson, secretary of the com-

pany, took a long business trip through eastern Ohio and western Pennsylvania recently.

H. W. Putnam, president of the General Lumber Company, reports prices the same and a steady demand for hardwoods. The company sells almost exclusively to manufacturing plants which are in the market with steady orders. The company will soon start to build a splash dam in a tributary of the Big Sandy river in Kentucky in order to float a large number of logs down to the mill at Ashland.

W. L. Whitacre believes that conditions will improve soon and that the slight lull which is now apparent will soon pass away. He says prices continue firm. D. W. Kerr of the W. L. Whitacre Lumber Company recently returned from a business trip to Cincinnati.

C. G. McLaughlin, general manager of the McLaughlin-Hoffman Lumber Company reports a quiet week, with no recession in prices. He says farmers are too busy with their crops to purchase lumber.

The W. M. Ritter Lumber Company has started to develop a large tract of timber land near Richlands, Va., which was recently acquired from the Yellow Poplar Lumber Company. The tract is situated about three miles from a railroad and contains a large amount of oak and hemlock. The company has built a private tramway. H. G. Horton of the sales department of the company reports steady conditions in the hardwood trade generally. He says prices are stationary and that in a few cases there is a tendency to advance quotations. The lower grades are not in as good demand as the higher grades. There is a slight advance in firsts and seconds, both red and white oak, and also in firsts and seconds, poplar. H. W. Collins, manager of sales of the central sales division, was called out of Columbus early in the month.

At the annual meeting of the stockholders of the Buttles Avenue Lumber Company, J. H. White, one of the directors, retired after selling out his holdings. E. M. Slyh was elected on the board to fill the vacancy. The officers are: W. E. Hyde, president and general manager; W. H. Jones, vice-president, and O. M. Gardner, secretary and treasurer.

It will soon be a year since a receiver was appointed for the Rood Lumber Company, a box factory located on Buttles avenue. Receiver W. F. Hyde reports an increase in the assets under his management. He says no plan of reorganization has been adopted, although a number have been suggested. An inventory of the property will be made April 16, which will be the close of the year's receivership.

W. P. Rolph, a representative of the Cherry River Boom & Lumber Company of Scranton, Pa., was a caller at the offices of a number of Columbus jobbers recently. He reports an improvement in conditions in every section of the country.

The Nugent Furniture Company of Toledo has been incorporated with an authorized capital of \$10,000 by Michael Nugent and others.

At Piqua, Ohio, the Piqua Handle & Manufacturing Company has increased its capital stock from \$150,000 to \$250,000 to provide for additional facilities.

J. J. Sexton, head of the Osborn & Sexton Company, reports a much better feeling among the planing mill men. He says business is increasing rapidly and that the prospects for the future appear bright.

The Ironton Lumber Company of Ironton, Ohio, has increased its capital stock from \$50,000 to \$100,000.

The Portage Lumber Company of Akron, Ohio, has been organized as the successor to the Wilson Lumber Company of that city, which has been in business since 1868. K. H. Hays is president of the new corporation; Ross A. Wilson, vice-president, and S. N. Wilson, secretary-treasurer.

H. C. Bard of the Middle States Lumber Company returned recently from a ten days' trip to

which entered into a deal to take the output of a large mill at Eunice, La. The company bought the stumpage of 10,000,000 feet, which will be cut under its direction. The mill was formerly known as the W. E. Jelks & Son's operation. Mr. Bard reports a tendency to advance prices in the South and he believes that this tendency will soon be reflected in Ohio.

J. H. Heyl of the J. H. Heyl Lumber Company returned recently from an extended business trip throughout the South.

C. T. Nelson, head of the C. T. Nelson Column Company, reports quite an increase in orders since the weather became more favorable. He believes that business will continue to improve.

## TOLEDO

The first lake shipment of lumber of the season came in last week. It consisted of 265,000 feet of hardwoods on board the steamer W. J. Carter, and was consigned from Alpena, Mich., to the Phoenix Box Company of this city.

W. S. Booth of the Booth Column Company is in Philadelphia on business this week. The concern reports that trade is picking up all along the line, and that not only have local sales greatly increased but that a strong demand has come in from all over the country for porch columns.

A deal of considerable interest to hardwood dealers in this section was recently consummated when the Hocking Valley railway was taken over by the Chesapeake & Ohio. George W. Stevens was elected president of the newly organized company, succeeding Nicholas Monserrat, and Frank Trumbull of New York was chosen chairman of the board of directors. About \$260,000 will be expended in improving Toledo terminals in the near future.

The David Lumber Company is finding a brisk demand for its entire hardwood output, and the two Michigan mills of the concern are kept unusually busy supplying the demands of the trade. They are at present engaged in cutting oak, elm, basswood and ash, and are barely able to supply the demand from factories for these materials.

The piles of sawdust at the old Mitchell & Rowland lumber yards are again burning, and the eastern portion of the city has been enveloped in a dense cloud of smoke for days as a result. This has been a source of much annoyance for years, and no solution has ever been worked out whereby the fire could be effectually prevented.

One of the finest carloads of oak ever shipped into Toledo was unloaded at the Big Four Hardwood Company's yards last week. It consisted of inch boards ranging in width from 18 inches to 34 inches, and perfectly clear. Eighty per cent of the car was 16 feet in length, ten per cent 14 feet long, and not a board was less than 2 feet. The company makes a specialty of handling high-class stuff. Manager Roberts of this company is at present absent on a business trip to West Virginia, and other southern points.

An overheated boiler at the plant of Waldutter & Kahlenberg, chair manufacturers on Inwood avenue, Toledo, caused a serious blaze Saturday, which threatened to destroy the entire plant. Prompt work on the part of the fire department kept the damage down to \$450.

The N. D. Hale handle factory at Ashley, Ohio, was totally destroyed by fire, entailing a loss of \$25,000. The origin is unknown. Fifty men were thrown out of employment, and it is thought the plant will not be rebuilt.

Mr. and Mrs. Aaron Chesbrough will sail on April 6 for a tour abroad. The objective point will be Oberammergau, where they will witness the Passion Play. Mr. Chesbrough is one of the largest timber and lumber dealers in this section.

William T. Hubbard is in Detroit for a few days on business connected with his large local wholesale hardwood yard.

A stretch of fifteen acres of valuable hard-

wood timber was destroyed by fire on the farm of Callie Coe Shaw near Tiffin, Ohio, last week. Several hundred farmers made an ineffectual effort to stop the flames, which died out after reaching a water filled ravine.

The Toledo Bending Company reports a light business aside from the repair department, which is very busy. The output of the concern consists of carriage and wagon stock, and the automobile industry has made deep inroads in this class of trade recently.

"Business is getting better with us all the time," said Frank Spangler. "We are specializing in cypress and bay poplar at present. Cypress has been very strong and the supply is not plentiful. Bay poplar, being not so well known, we have had to create a market for it, but we have now worked up a nice trade. The automobile business is leading all other industries."

## MEMPHIS

Weather throughout the Memphis territory during the past fortnight has been ideal for the production of hardwood lumber and splendid progress is reported in every direction. There have been some few mills which have not been in operation, but these have been the exceptions which have proven the general rule of activity.

Bank clearings in Memphis during the month of March broke all previous records for that month by several million dollars. As compared with last year there was a gain of more than \$9,000,000, or practically 40 per cent. As compared with 1903 there was a gain of a little more than 100 per cent. Building operations during March were about \$45,000 ahead of the corresponding month last year, while reports from Little Rock and Birmingham both indicate record-breaking bank clearings and building operations. The railroads are enjoying a most satisfactory volume of business, and they make no secret of the fact that lumbermen are giving them more than their share of tonnage. The Iron Mountain reports that during the month of March it handled nearly three times as many lumber shipments as during the corresponding month last year, and some of the other railroads indicate that their gain has been very pronounced as compared with any March for recent years. In fact, some of the lumbermen themselves say that they have done more business during March than they ever did.

The box factory of the Morgan-West Box Company, at Madison, Ark., which has been closed down for repairs for about two weeks, has resumed operations. The plant has been put in first-class condition.

The band mill and veneer factory of R. J. Darnell, Inc., in South Memphis, resumed operations this week after a shut-down of about a fortnight, due to changes in the trackage to its timberlands. It was impossible under the circumstances for the firm to secure all the timber it needed, and the plant was thrown temporarily out of raw material. This firm has materially increased its timber land holdings by the purchase of 10,000 acres in Tunica county, Miss. This new tract adjoins a tract of about 7,500 acres already owned in that section, with the result that the new acquisition gives the firm practically 17,500 acres in one body. The timber on this tract will be brought to Memphis and developed at the plant of the firm in this city. The mill of the Darnell-Love Lumber Company at Leland, Miss., is running on full time.

The McLean Hardwood Lumber Company is running its big band mill and resaw in New South Memphis on double time. It is working both day and night. The supply of timber on hand is ample for the present, and the company does not anticipate any special difficulty along this line.

The Anderson-Tully Company has been operating its mill and both of its large box factories here recently, but one of the box factories will

close down this week. However, the firm is working at full capacity at Vicksburg, its box factory and both of its mills at that point being on full schedule.

Indianapolis capitalists have secured a site at Dickson, Tenn., on which a large mill for the manufacture of finishing material will be established. The enterprise will necessitate the expenditure of a large amount of money and the employment of a number of both skilled and unskilled laborers.

Max Sondheimer, president of the E. Sondheimer Company, is authority for the statement that business is more satisfactory and that the demand is larger than it has been for a number of months. In fact, he states that his firm is doing an unusually satisfactory business, despite the fact that it is depending on daily orders. It is refusing to sell any lumber for forward shipment, believing that prices will be higher later on. Mr. Sondheimer has recently favored one of his banker friends in Chicago with his views on the hardwood lumber situation, and these were very optimistic. In fact, Mr. Sondheimer thinks that there will be no difficulty in selling from cover to foundation in the very near future.

The Meridian Planing Mill & Creosoting Company, Meridian, Miss., will shortly resume operations. The plant was destroyed by fire last September and has been practically rebuilt. Concrete has been largely used in the construction of the new plant, and it is as nearly fire-proof as it could be built.

The American Cooperage Company of Helena, Ark., has filed articles of incorporation with the secretary of state. The capital stock is \$25,000. John R. Livingston is president and Dale Welch is secretary and treasurer.

The Earle Cooperage Company, Earle, Ark., has also incorporated, with a capital stock of \$10,000. C. T. Whitman is president and R. A. Scott secretary and treasurer.

There is no doubt that the mill of the Dierks Lumber & Coal Company at DeQueen will be rebuilt and that it will be practically double the capacity of the old plant which was destroyed by fire. The financial arrangements have already been made through the execution of a mortgage by the company in favor of the American Trust & Savings Bank of Chicago, for \$600,000. This instrument has already been filed for record and is secured by timber lands in Sevier, Howard, Pike and Polk counties.

The W. G. Baker Lumber Company, Heber, Ark., has been granted a charter. The capital stock is \$25,000. R. T. Martin is president and Mortimer Frauenthal is secretary and treasurer. Heber is one of the best towns on the Missouri and North Arkansas, the new road which has been constructed in that state and which opens to development a very large amount of hardwood timber lands.

The Brown Lumber Company, of Paragould, Ark., has filed an amendment to its charter whereby the capital stock is increased from \$15,000 to \$50,000.

Russe & Burgess, Inc., the Darnell-Taenzer Lumber Company, the Green River Lumber Company, the Chickasaw Cooperage Company, the McLean Hardwood Lumber Company and the J. W. Thompson Lumber Company, as well as other hardwood firms in this city, have been awarded damages against the Illinois Central and Yazoo & Mississippi Valley Railroad companies in the form of reparation for the overcharge of 2 cents per 100 pounds on shipments of hardwood lumber from Memphis to New Orleans. It will be recalled that the old rate was 10 cents per 100 pounds and that an advance to 12 cents was made several years ago. The J. W. Thompson Lumber Company and others brought suit against the Illinois Central and Yazoo & Mississippi Valley Railroad companies, contesting the reasonableness of this advance, and won a signal victory before the Interstate Commerce Commission. After this victory was won, the supplemental petition was

filed with the commission, asking reparation. A supplemental decision has just been handed down by Commissioner Lane awarding the amounts to the various companies represented by the over charge they paid from the time the original suit was filed.

The American Car & Foundry Company of Binghamton, a suburb of Memphis, has booked an order for 450 cars for the Mexican Central railroad. This means that it will give employment to from 300 to 400 carmakers who were recently laid off. Furthermore, the management states that the time of year is at hand when large orders are usually booked and the opinion is expressed that this plant will be running on full time early this summer. When operated at full capacity it gives employment to about 1,200 people.

The Bureau of Publicity and Development has succeeded in raising the fund of \$50,000 for the purpose of advertising the advantages of Memphis. In fact, it secured slightly more than the \$50,000 for which it started the campaign. It is the purpose of the Bureau of Publicity and Development to conduct a systematic campaign of advertising in order that the advantages of Memphis may be properly made known to the world. Organization has not yet been fully perfected nor have the plans been altogether worked out, but these details will be settled within the next few days and definite announcement as to the character of the campaign will be made. Lumber interests have contributed in large measure to the fund and the Lumbermen's Club has representation on the committee of forty, as well as on the smaller executive committee.

The Garetson-Greaser Lumber Company, incorporated under the laws of Missouri with a capital stock of \$30,000, has filed certificate of its articles of incorporation with the secretary of state of Arkansas and will do business in that state. Its headquarters for Arkansas are at Hope, and Joseph R. Houser is agent. The company has \$17,728 of its capital employed in Arkansas.

J. J. Russell of Minneapolis, Minn., is still working on the proposition of establishing a large plant here for the manufacture of slack barrel staves from gum. This matter was brought to the attention of the Business Men's Club some time ago, and within the past few days the industrial department of that organization, in charge of Jas. S. Warren, has agreed to take up the matter and do what it can to facilitate the establishment of the factory here. Mr. Russell has asked that the department send a representative to Minneapolis to investigate his proposition. He claims that gum timber can be used to advantage in this line, and lumbermen here are much interested in the proposition, as heavy substitutions of strawboard and other material for cottonwood and gum in the manufacture of box shoos has deprived the gum and cottonwood markets of a great deal of support which they have heretofore enjoyed. There is an abundance of gum in this territory, and Memphis is regarded as the logical location of such an industry.

The Nickey Brothers Hardwood Lumber Company has practically completed its plant in the southwestern part of the city. It will be ready for operation within the next few days and will make a specialty of cutting high-grade lumber. The company has already booked a large number of orders, and it will begin business with unusually flattering prospects. The mill is a band one, and will have a large capacity. It is estimated to have cost between \$30,000 and \$40,000, including the site and other holdings.

John W. McClure, who was recently elected manager of the baseball team of the Lumbermen's Club of Memphis, has appointed John M. Pritchard as captain for the ensuing season, succeeding Ralph Bennett, who has been at the head of the team for the past three years and who has piloted it to a number of signal vic-

tories. Manager McClure is working out the details of several plans which, in his opinion, will increase the interest of the individual players as well as that of the firms with which they are connected. While none of the arrangements have been completed yet, it may be stated that it is one of the plans of the management to make a tour of some of the lumber centres this summer if games can be secured. Practice work will begin now in a few days and, until the permanent players have been selected, there will be enough aspirants for places on the team to insure practice games whenever desired.

## BRISTOL

Another new mill was started near here last week, when the operation of the Unaka Lumber Company of which J. J. Hager of Bristol is president was started, at Unaka Springs, Unicoi county, Tennessee. It is located on the Carolina, Clinchfield & Ohio railroad, not far from Erwin. The company has purchased 6,000 acres of timber and estimates that it will require ten years to cut it.

The band mill of the O. H. Vial Stocking Company, in Greene county, Tenn., recently completed, is now running full time and the company is turning out a large amount of stock.

The Bristol Door & Lumber Company sustained a small loss by fire last week. The plant had a narrow escape from being destroyed.

The Paxton Lumber Company this week removed its offices to the new office building near the mill, on Seventh street. V. K. Simpson of the company is just back from Louisville and reports the business outlook there as most encouraging.

Several large lumber concerns in this section have recently put in water works and taken other steps to reduce the fire hazard to the minimum. Some severe fire losses have been sustained by the lumbermen in this section in recent years.

Another tract of Carter county (Tenn.) timber changed hands a few days ago, when a Pittsburg syndicate purchased 10,000 acres, near Hampton, close to the property of the R. E. Wood Lumber Company and the W. M. Ritter Lumber Company. It is planned to develop this soon.

J. W. Henniger has gone to work installing his mill on the timber tract in Happy Valley, Carter county, Tenn., recently purchased from C. C. English, in this city.

The big band mills and other operations of the Whiting Manufacturing Company are going steadily forward. The output of this company's operations in this section is very large. It specializes in hardwood flooring and ships some of its finest stock that is received from anywhere in the United States to the North.

H. P. Wyman of the Came-Wyman Lumber Company will soon return from an extensive western trip, including a stay on the Pacific slope.

Of interest in hardwood circles is the announcement made this week of the approaching marriage of Irving Whaley, head of the Whaley-Warren Lumber Company of this city, to Miss Margaret Ashworth, also of Bristol. The marriage will occur here the latter part of April and will be of much interest to the hardwood men. Mr. Whaley is well known to the trade in the North, East and South. He was for years with the Tug River Lumber Company.

## LOUISVILLE

The Louisville Hardwood Club is planning and working for the convention of the National Hardwood Lumber Association, which will be held here in June. The executive committee in charge of entertainment, which is composed of Mark Brown, Claude Sears and Barry

Norman, had a meeting last week and worked out some of the details of the entertainment. As yet, however, it has not been stated just what form this will take, as the hardwood men want to spring a few surprises when their visitors reach town.

Every indication points to a great crowd for the convention, and it looks as if the meeting will be one of unusual interest, on account of the various questions which are to be disposed of. That of odd lengths will undoubtedly be discussed, for Col. C. R. Mengel, of C. C. Mengel & Bros. Company, secured the endorsement of that principle at a recent meeting of the inspection committee at Chicago, of which he is a member. He advocated the authorization of the use of odd lengths in wagon box boards, and the following rules for the inspection of that item will be proposed to the convention when it meets in Louisville:

"Material: Poplar, cottonwood, gum, bay poplar (tupelo) and basswood.

"Widths: Wide, 13 to 17 inches; narrow, 9 to 12 inches.

"Lengths: 12, 14 and 16 feet, but not to exceed fifteen per cent may be 11, 13 and 15 feet.

"Thickness: Must be free from defects except that no objection will be made to bright sap or sound discolored sap; also one sound knot, not to exceed 1 1/4 inches in diameter, or its equivalent, showing on one face only. Eleven-foot lengths to be free from splits; 12, 13 and 16-foot lengths will admit of a 12-inch split in one end or its equivalent in both ends; 14 and 15-foot lengths will admit of splits not to exceed six inches in one end or its equivalent in both ends.

"Note—Inspectors are cautioned that 'wooly cottonwood and badly warped lumber must be excluded from this grade.

"The rules governing the manufacture and measurement of other lumber apply to this grade."

Col. Mengel took the stand that the idea of conservation, which is uppermost in the public mind, must be dealt with in a practical way, and that the use of odd lengths will do much to conserve the timber resources of the country.

In connection with the convention the members of the club have found that their most enthusiastic members are among the new comers. The North Vernon Lumber Company, the Ohio River Sawmill Company, the Louisville Veneer Mills, the Mengel Box Company and representatives of all these concerns are regular attendants at the Tuesday night dinners of the club, at the Seelbach, and are taking an active part in the discussion of plans for the big meeting.

Barry Norman, of E. B. Norman & Co., is getting back most of the logs which he lost during the ice and high water in the winter. The water carried away about 1,100 of them, and of these he recovered 700, which are now being barged up the river to his mill on the point. In addition he has secured a good many logs from C. Crane & Co. of Cincinnati. These were carried away, too, and Mr. Norman made an arrangement to take them, thus saving the cost of the barge haul from Louisville to Cincinnati. "Dry stocks are mighty scarce," said Mr. Norman in conversation with HARDWOOD RECORD correspondent. "In fact, the supply is lower than it has been for a long time. The consequence is likely to be higher prices. I look for advances especially on plain oak, which has been quoted low too long. There is no reason, in my mind, why the quotations on plain oak should be below those on poplar, and the fact that prices on the former are gradually advancing indicates that the difference between the two will be made less as time goes on."

Lack of water is keeping a good many Kentucky mills idle. Following the extreme drouth of the past few weeks, many of the mountain streams are at low stage, and it is impossible to handle logs in them. As the mills in a great many cases depend on the rivers for their logs, they are unable to run. This is the case with mills in which Louisville hardwood firms are interested, among them being the Ford mill of the Louisville Point Lumber Company. That company is now running its Louisville mill, cutting logs which were secured from southern Indiana and brought up the Ohio by barge. Ed Shippen and H. J. Gates of that company are out of town on business.

The Southern Lumber Company has been shipping lumber from southern mills at a rapid rate also. Mr. Norman and his assistants are being kept busy handling the two opposing streams. During the summer the company will move its quarters to the Magnolia street site some time ago.

Charles Sears of the Edw. L. Davis Lumber Company has returned from a trip East, in which he secured several large orders. The Glasgow mill of the company is now running, as is that in South Louisville.

J. C. Wickliffe, secretary of the C. C. Mengel & Bro. Company, sailed March 26 for Liverpool. He will be gone two or three months, and will visit England, Scotland, France, Russia, Italy and nearly all the Continental countries. His trip is in connection with the export mahogany trade of the company, which has been growing at a rapid rate. The company has always been a large exporter of lumber, and this branch of the business is to have its full share of the attention from now on. Julius Sicker, sales manager of the company, has returned from a trip to New York. C. R. Mengel, head of the company, recently visited the company's Chicago branch and found everything in good shape. Everybody around the Mengel offices is smiling just now and offering congratulations to Charles Heimerdinger, shipping clerk, whose home on Forest avenue was visited by the stork last week, bringing triplets, all girls.

D. C. Harris, traffic manager of C. C. Mengel & Bro. Company and secretary of the Louisville Hardwood Club, will have the distinction of speaking for the shippers of Louisville at a meeting of the Traffic and Transportation Club, to be held April 11. The subject under discussion is to be the new demurrage and car service rules which went into effect April 1, and in addition to Mr. Harris, representing the shippers, there will be addresses by a car service man, a local agent and a superintendent. Another stunt the Traffic Club is to pull off is a trip around the city to view the terminals of the various roads. This will be April 12, and nearly all of the lumbermen will go, as the swing will touch the plants of most of them.

Recent visitors to the hardwood market include John L. Cochran, of New York, and Mr. Hamlin, representing the Righter Lumber Company, of Philadelphia. There are more buyers coming to Louisville for their hardwoods than ever before.

D. E. Kline of the Louisville Veneer Mill reports the volume of business satisfactory. Veneers are being turned out at his mills for delivery in all parts of the country and for use in nearly every veneer-consuming industry.

Among local industries which have started recently and which interest the veneer men here is the Inman-Pierson Furniture Company, a \$100,000 company which is now completing its plant at Thirtieth and Kentucky streets.

J. Taylor Green, who has been with the Big Four here as chief clerk to the general freight agent, has been made traffic manager of the Indiana Veneer & Panel Company and the Stout Furniture Company, both of New Albany.

R. L. Thomas, who owns a hardwood mill at Ford, Ky., and who has been prominent on the turf for a long time, has announced his retirement from the racing game, and says that he will stick to lumber from now on.

The Adler Lumber Company has filed amended articles of incorporation increasing its capital stock to \$75,000. Those signing the articles are C. L. Adler, R. S. Hill and B. A. Meyer. The company is to operate in connection with the Beckwith Organ Company.

Dry weather is responsible for a good many recent fires affecting lumbermen. From Pineville, in Bell county; South Park, Jefferson county; Sergeant, in the Cumberland mountains; Allen county, in Southern Kentucky, and other timber districts reports have come of the destruction of trees by fire. A fire destroyed the

sawmill of Pat Murphy at Stanley, Ky., and the same cause resulted in a loss of \$20,000 at Lawrenceburg, where the warehouse and lumber yard of the People's Supply Company was burned.

Jerry Childrens of Campton, Ky., died recently of heart trouble. He was engaged in manufacturing lumber and ties.

Owing to activity in connection with coal lands in eastern Kentucky, caused by the construction of the Black Mountain and Washtoto Railway, many extensions of roads running into that section are planned. The one referred to will build a 22-mile extension up Poorfork, a branch of the Cumberland river, while it is reported that roads in Virginia will probably extend their lines across the mountains into Kentucky. That section is full of timberlands which on account of lack of transportation have hardly been touched.

According to word received from Washington, the Rivers & Harbors appropriation bill to be recommended by the committee will carry appropriations of more than \$1,000,000 for the Ohio river and will also take care of other streams in this section in which the lumbermen are interested.

The Union City Lumber Company, Rothwell, Ky., has sold its timber holdings and lumber, including a railway which it built, to W. Russell Tabor, S. S. Pinney and R. G. Lyons, of Mt. Sterling. The amount involved was \$20,000.

The Louisville & Nashville statement for the first half of March has been issued, and shows that big gains in earnings are being made, reflecting a healthy condition of business all over the South. Since July 1, the beginning of the fiscal year, the gain has been close to \$4,000,000.

Building in Louisville is going ahead at a rapid rate. March showed 298 permits issued, representing \$336,000, while the corresponding month of 1909 recorded 352 permits with \$345,000. A gain is shown, however, in comparison with the building done during the first quarter, which during 1910 showed building amounting to \$927,000, as against \$579,000 last year.

## ASHLAND

John W. Kitchen has just returned from a business trip in the North, and reports trade conditions good; poplar and oak in No. 1 common and better are good.

John W. Powell, a lumberman from Canisteo, N. Y., was a recent business visitor in the city.

S. S. Pinney of Mt. Sterling, W. R. Tabor and R. Y. Lyons of Rothwell, Ky., have purchased the Red River Railway Company and the Union City Lumber Company in Menifee county, Kentucky. J. W. McCausey, who has been at the head of the lumber company for the past twelve years, will devote his time to the Michigan State Life Insurance Company, of which he is president. The lumber company will be operated under the name of the Rothwell Tie Company, but the railroad will continue to be known as the Red River Valley Railroad.

J. Y. Darling of Cincinnati, O., was a prominent lumberman in our city this week.

R. H. Vansant reports business good. The mill is in steady operation, but the timber supply is short—the last tide having brought a comparatively small supply of logs.

The Berwind-White people are directly interested in a gigantic deal just closed by Z. T. Vinson of Huntington, W. Va., and John C. Mayo of Paintsville, whereby a tract of 100,000 acres of timber and coal land in Kentucky, lying on Peters Creek, between the Tug and Levisa forks of Big Sandy river has been sold. The consideration involved approximated \$3,000,000,000.

Whisler & Searcy of Ironton are pretty busy these days filling orders. The company is well pleased with the business outlook. Its mills at Ironton and Farmers (Ky.) are both in operation, with plenty of timber to keep them going for some time.

The W. R. Vansant Lumber Company, with mills at Rush, Ky., is doing a fine business. It is having a particularly steady demand for common and better plain and quartered oak.

The Southern Hardwood Lumber Company reports a steady improvement in its business. March proved to be an exceptionally good month. J. H. Kester is in Ohio calling on the trade in the interest of his firm.

The W. H. Dawkins Lumber Company's mill is running steadily but the supply of timber is not very large. However, there are enough logs on hand to keep the mill busy until May or June. Business is good and the company is receiving more orders for high grade stock than it can fill.

The Reese-Kitchen Lumber Company, with mills at Wrigley and sales office in Ashland, reports a satisfactory business. It is turning out a fine lot of oak and poplar.

August Schmidt, manager of the H. Herrman Lumber Company, has just closed a deal whereby his company acquires a fine lot of timber along the Big Sandy. Mr. Schmidt reports business good.

Among prominent visiting lumbermen in the city the past week are: B. O. Brill of the J. G. Brill Car Works, Philadelphia; H. S. Hall, representing Richey, Halsted & Quick of Cincinnati; W. J. Pulling of Windsor, Can.; John Hall of Scofield Brothers, Philadelphia, and J. W. Taylor, representing the Domestic Lumber Company of Columbus, Ohio.

## ST. LOUIS

While the building operations for March, according to the report of the building commissioner, showed a falling off in totals, as compared with the corresponding month last year, yet by the new system which the building commissioner inaugurated at the beginning of the month, clearly showed in just what class of structures this falling-off occurred. There was a decided increase in the number of private homes over the same month of 1909. More than 180 of these were of brick and cost less than \$20,000. The aggregate amount of money which will be put in homes, as called for by permits issued in March, is more than \$550,000. The tendency toward the construction of flats and apartment houses or "tenement houses" as all are termed now was noticeable, and the figures considerably exceed those of a year ago. There were 160 tenements costing each less than \$15,000 and totaling more than \$700,000 started during the month. The building commissioner predicts continued activity for this month and well into the summer.

The following is a report of the movement of lumber at this market during March: Receipts by rail during March, 1910, were 17,601 cars; during March, 1909, there were 12,728 cars, an increase of 4,873 cars in 1910. Receipts by river during March, 1910, were 120,000 feet; during March, 1909, 236,000 feet, a decrease of 116,000 feet this year. Shipments by rail during March, 1910, were 11,491 cars; shipments by rail during March, 1909, were 9,261 cars, an increase of 2,230 cars this year. Shipments by river during March, 1910, were 40,000 feet; during March, 1909, 270,000 feet, a decrease of 230,000 feet this year.

Arthur E. Holmes, a widely known lumberman from Detroit, Mich., with several other lumbermen met a few days ago in the office of the Lumbermen's Exchange to discuss forest conservation and other questions vitally touching the lumber industry. Freight rates were discussed as well as the problem of dealing with future fluctuations in prices.

Early in March Julius Seidel, chairman of the entertainment committee of the Lumbermen's Club, sent a letter to Mr. Pinchot, inviting him to be the guest of the Lumbermen's Club while he was in St. Louis in connection with his visit to the Ozarks, with Gov. Hadley and the members of the Forestry Commission of Missouri. Mr. Seidel received the following reply:

WASHINGTON, D. C., March 14, 1910.

Mr. Julius Seidel, Lumbermen's Club, St. Louis.  
Dear Mr. Seidel: My heartiest thanks for your letter of March 12. Yes, I am coming to Missouri to go into the Ozarks with Governor Hadley and when I reach St. Louis, either before or after that trip, it will give me very great pleasure to be the guest of the Lumbermen's Club, as you are kind enough to suggest.

Please tell the members of the club, if you have a chance, how much I appreciate the invitation, and how glad I shall be to be with you. Sincerely yours,

GIFFORD PINCHOT.

Mr. Pinchot will talk to the club on forestry, and the meeting will be arranged to be held during Mr. Pinchot's visit.

The funeral of William A. Bonsack, president of the Bonsack Lumber Company, who was accidentally drowned while fishing in Lake Pontchartrain near New Orleans a couple of weeks ago, and whose body was found shortly afterwards, took place from his residence in St. Louis Sunday afternoon, March 27. Among the pallbearers were several of his associates in the lumber business. At the request of Mrs. Bonsack, the funeral was very quiet.

At a recent meeting of the directors of the Lumbermen's Exchange of St. Louis the following resolution was adopted:

Resolved, That the sudden and unexpected death of William A. Bonsack, president of the Bonsack Lumber Company, who was drowned in Lake Pontchartrain, near New Orleans, on the 18th of March, cast a gloom over his many friends and associates in St. Louis.

Mr. Bonsack was born in St. Louis August 7, 1857. He was educated in the public schools of St. Louis and was married in 1894 to Miss Lulu Ringen. Besides his widow, he is survived by two children. He began his business career in 1879, and since then has been a president of the Lumbermen's Exchange and has served as a director almost the entire time of its existence. His suggestions and counsel have always been wise and practical. In private life he has always taken a great interest, and has been a well-known patron of art and music. He will be greatly missed from the Lumbermen's Exchange, and we, his associate directors, tender our sincere condolence and deepest sympathy to his family.

LYOYD G. HARRIS,

ALFRED W. JOHANNING,

GEORGE E. W. LUEHRMANN.

E. L. Page, manager of the hardwood department of the Alf. Bennett Lumber Company, says that the hardwood business, taken as a whole, is good. Inquiries are coming in plentifully and quite a number of good sized orders have been booked. The general outlook for future business is exceedingly bright. Alf. Bennett, president of the company, returned from Houston, Texas, a few days ago and immediately left for Kansas City on business. While in Houston Mr. Bennett superintended the opening of the branch office there, organization being effected to comply with the laws of Texas. The company will handle hardwood as well as yellow pine, and Mr. Bennett says the Houston office is having a nice volume of hardwood business, principally for export.

E. H. Warner, the well-known hardwood lumber dealer of St. Louis, celebrated his seventy-seventh birthday March 20. For thirty-five years he has been in the lumber business in St. Louis, and is as active as a man many years younger.

After a couple of weeks spent in the hardwood section of the South, Thos. W. Fry, secretary of the Chas. F. Luehrmann Hardwood Lumber Company, is back at the office again. He reports that there is every prospect of a good season in sight. The company is enjoying a good business, its red gum sales being especially heavy.

W. W. Dings, secretary of the Garetson-Greaseon Lumber Company, who went to Chicago a few months ago to establish an office in that city, has returned to St. Louis and will remain here. The Chicago office has been placed in the hands of a competent hardwood manager, so Mr. Dings will not have to remain there, but of course will make frequent visits to that city.

The Lothman Cypress Company report a nice business in cypress; in fact, trade has been exceptionally good in this class of lumber during the past few weeks. Anticipating a big demand

later on, they are getting in a large stock of cypress, in order to be prepared for the prospective business.

Gov. Hadley has issued a proclamation setting April 11 as Arbor Day in Missouri. He calls for the public schools and citizens to observe it. In his proclamation, he asks that every class and every school in the state plant upon the school grounds at least one shrub, tree or flower.

## MILWAUKEE

The John Schroeder Lumber Company, Milwaukee, has purchased a tract of forty acres near the Butler postoffice, in the northwest corner of the county. This place is expected to be a switching point for the Chicago & Northwestern road's new belt line, and the Schroeder company intends to use the property as a distributing yard.

M. J. Wallrich, who with several other northern Wisconsin men is interested in the Wisconsin-Northern road, while in Milwaukee recently, denied the report that the road had been disposed of to the Soo line. It is expected to complete the line this summer. It enters rich hardwood district of northern Wisconsin.

The Allis-Chalmers Company, Milwaukee, Wis., has furnished the machinery for electric drive in the mill of the Aberdeen Lumber & Shingle Company, Aberdeen, Wash.

The Northwood Furniture Company, Chippewa Falls, Wis., is planning the erection of a bolt resaw mill.

J. W. Arney of Port Huron, Mich., is considering a proposition with the Business Men's Association, Sheboygan, Wis., for locating a woodenware factory in that place.

The Kaukauna Land, Timber & Supply Company, Appleton, Wis., has increased its capital stock from \$10,000 to \$60,000 according to the amended articles of incorporation filed with the secretary of state.

As a result of the early spring breakup near Republic, Mich., it is expected that many sawmills will run short of supplies before the season is over, as there are great numbers of logs still on the skidways. It will be impossible to move them now without hauling by wagon and as this method is exceedingly expensive it is probable that they will be left until next winter.

The newly organized Edgerton Wagon Company, Edgerton, Wis., is planning the erection of a new brick factory building 50 by 200 and one story in height. Negotiations are now being carried on for the purchase of a site. The officers of the company are: President, Andrew Jensen; vice-president, L. C. Whittet; secretary, Charles Birkenmeyer; treasurer, Henry Johnson.

The large wood shop of the Mandt Wagon Company, Stoughton, Wis., has been completed and the work of installing the three large boilers in the new power house is being rushed so that the old building can be demolished and the old machinery used elsewhere. Contracts will soon be let for a blower, dust collector and about 500 feet of galvanized pipe, two feet in diameter, to be used in connection with the conveyance.

The Plymouth Veneer Company, Plymouth, Wis., has commenced work on its new factory, and it is hoped to have the structure ready to commence operations by August 1.

In the last five years Wisconsin has dropped down from the first to the fifth state in lumber production. Consequently the Wisconsin state conservation committee is receiving the support of many lumbermen in efforts to improve the forest conditions. At the present time over three million acres in the northern part of the state have no forest cover; millions of acres are partly covered with dead and dying forests. The state is suffering a great annual loss through the non-utilization of land suitable for forest growth and such continued neglect will mean the ultimate loss of the wood-using industries.

At a recent meeting of the officers and directors of the Wisconsin Manufacturing Company, manufacturers of chairs at Jefferson, Wis., it was decided to erect an addition to the plant. The new addition will be constructed of brick and will consist of three stories, 34 by 48 feet.

The Diamond Lumber Company, Green Bay, Wis., is erecting a new storage shed, 100 by 30, to take the place of the one wrecked by the snow during the winter.

Mrs. E. Selle has been recently elected president of the Selle Excelsior Company, Viola, Wis. The general offices have been removed from Chicago to Viola and many improvements are to be made to the factory, increasing the daily output to 30,000 pounds.

The large mill of the J. S. Stearns Lumber Company has been started at Washburn and will continue operations during the entire season. It will be run night and day with a force of 300 men and is supplied with logs brought from the Odanah reservation.

C. Mercier has ceased his logging operations at his camp near Rice Lake, Wis., and will soon start his sawmill. Enough logs are on hand at present to keep the mill running day and night for eight months.

The Simplex Washer Company, Milwaukee, manufacturers of washing machines, has filed a voluntary petition in bankruptcy. The liabilities are \$1,140.70 and the assets \$300.

The Appleton Chair Company, Appleton, Wis., has commenced building operations on its new factory which will be located near Appleton Junction. As soon as the new building is completed the machinery and other equipment will be removed to the new structure, which will be much larger than the present one.

An order has been received by the Meyer Cheese Box Factory, Merrill, Wis., from the Sheboygan dealers for 200,000 cheese boxes. The Sheboygan county manufacturers of boxes have been unable to meet the increasing demand for their products from the cheese makers and as a result it became necessary to fall back upon the Merrill factory.

The earliest breakup that has occurred in years marked the closing of the season for the final logging operations near Chippewa Falls, Wis. For the first time in seventy-five years there will be no log drive on the Chippewa river and this fact marks the passing of the lumber industry in northern Wisconsin. All of the pine logs, 21,000,000 feet, that are to be cut at the mill of the Chippewa Lumber & Boom Company's mill have been brought in by rail. The company's mill at Chippewa was for a long time the largest in the world, and will be run full capacity during the summer so that the firm can complete their operations in that part of the country.

Work has been commenced by the American Manufacturing Company, manufacturers of chairs, Sheboygan, Wis., on a new addition to its factory. The new part will be 70 by 70 feet and four stories in height, with brick walls and mill construction.

The Milwaukee Cedar Company has been incorporated with a capital stock of \$36,000.

The Schmidt Lumber Company, Two Rivers, Wis., has filed articles of incorporation with the secretary of state. The capital stock is \$15,000.

After being closed for several weeks, the Albrecht Manufacturing Company's cheese box factory has resumed operations. Many improvements have been made and the output has been increased by one-third.

Howland & Hurd of Merrill, Wis., have completed their logging operations, which have been managed by Julius Posey, with a cut of over a million and a half feet of hardwood timber. As a result of the early breakup, a large amount of timber has had to be left on the skids.

The Two Rivers Wooden Ware Company, Two Rivers, has sold a large tract of land, including the lumber piled on it, located in Two Rivers, to Henry Schmidt and Dr. A. M. Farrell, who are

## HARDWOOD RECORD

yard with Mr. Schmidt as manager.

Oconto and Holt lumber companies of Oconto have begun the season's run of their sawmills. Both of the plants are now running overtime and indications point to a most successful season. In the neighborhood of Oconto these companies own sufficient timber to keep them busy at least fifteen years. The day of log drivers has passed in that part of the state, as nearly all of the logs are taken to the mills by rail instead of being driven down the Oconto river as in past years.

### WAUSAU

The J. I. Case Company of Racine has placed an order for twenty-five automobiles of special build, to be used by the company's traveling salesmen.

The sawmill and all but two houses in the little village of Mellrue were recently destroyed by fire. The mill and most of the other buildings belonged to the Vollmar & Below Lumber Company of Marshfield. The loss on the plant is \$5,000.

The Stange Lumber Company of Merrill will operate two camps the coming summer. At present it is erecting a new office building.

For a second time in a little more than five years the Two Rivers Woodenware Company, one of the pioneer manufacturing concerns of that section, has gone into the hands of a receiver. The Milwaukee Trust Company was appointed receiver by Judge Quarles of the federal court. The liabilities of the company are estimated at \$395,000 and its assets at \$434,000. The company employs 200 men and has contracts on hand amounting to \$140,000. It is said that the plant will not be closed down. Temporary shortage of ready cash caused the trouble.

The sawmill of Wm. Elliott west of Nash was destroyed by fire a few days ago. A quantity of lumber was burned also.

The John Schroeder Lumber Company's mill in Ashland is being fitted with a new Corliss engine.

The Hatten Lumber Company of New London a few days ago lost 3,000,000 feet of logs by fire at Ellis Junction.

The past winter was a most favorable one for loggers in Wisconsin. The swamps were well filled with water before cold weather set in, and a continuous temperature between 30 above and 30 below enabled operators to reach and handle areas ordinarily inaccessible. There will be more timber cut in the mills this season than last year.

The car ferry Ann Arbor No. 1, the first car ferry introduced on Lake Michigan, caught fire a few days ago, five miles off the city of Manitowoc, and burned to the water's edge. Twenty cars filled with dry hardwood lumber were consumed.

An average of 100 cars of logs a day are being brought into Marinette and Menominee at present. The logs are delivered to the Republic Lumber Company, the Spies Lumber Company, the Sawyer-Goodman Lumber Company and the N. Ludington Lumber Company.

The Connor Lumber Company at Stratford a short time ago handled 29,000 feet of logs with two teams of horses. The load was twenty-two feet high.

The Maxson Lumber Company of Milwaukee has increased its capital stock from \$25,000 to \$50,000.

The Monitor Automobile Works of Chicago has decided to locate its factory in Janesville. Local investors are interested in the company to the extent of \$67,600. The company will begin moving soon.

Isaac Runor's sawmill at Pound was destroyed by fire a few days ago. This was the fifth mill to be burned on the site.

Fire was discovered in the "pin room" of the Geo. W. Price wood working mill in Crandon a

few days ago. The fire was extinguished after a large amount of stock had been scorched. The mill turns out hardwood plins for telegraph cross arms, wagon rims, hubs, etc.

The state of Wisconsin is the first to organize for a national crusade for the protection of national resources. The headquarters are in Oshkosh, with Assemblyman Wm. M. Bray in active management. Mr. Bray is chairman of the Wisconsin committee of the National Conservation Association, of which Gifford Pinchot is president. Assemblyman Edward W. LeRoy of Marinette is assisting Mr. Bray in the campaign. The opening work will be in the nature of addresses in various parts of the state, the idea being to carry on a campaign of education, interesting the public in the movement. At the same time an energetic move will be made to increase the membership to 5,000 or more, those joining the state association being thereby enrolled in the national body also.

The sawmill plant of the Heineman Lumber Company of Heineman was completely destroyed by fire on April 4. Although a high wind was blowing at the time of the fire the company managed to save its power plant, engine room, planing mill and lumber. The loss is covered by insurance and the company announces that it will begin the construction of a new and modern plant at once.

### CADILLAC

Hardwood trade in this vicinity is fair and all that could reasonably be expected. The demand for all kinds of maple, especially the higher grades, is more than the supply and the stocks of the lower grades are no more than normal. Hemlock is moving freely, and stocks of that lumber are not large.

Bruce Odell, Cadillac, F. L. Richardson, Alpena, W. C. Hull, Traverse City, and John C. Ross of Bay City are the delegates who will represent the Michigan Hardwood Manufacturers' Association at meeting of the National Lumber Manufacturers' Association at New Orleans, April 19 and 20. Chas. A. Bigelow of Bay City, president of the Michigan Hardwood Manufacturers' Association, will also attend this meeting.

The Michigan State Public Domain Commission aims to help reforestation by placing young trees of spruce, pine, cedar and other varieties in the hands of those desiring to take advantage of this plan at the cost of production plus the cost of packing. Two million seedlings 2 to 4 years old are available this spring and the commission announces it will arrange to put trees on the market every spring.

On Lake Michigan navigation has opened earlier than usual this season and a heavy tonnage will no doubt be handled. March 23 the steamers Nessen and Fletcher cleared Manistee harbor with cargoes of lumber for Chicago.

V. C. Allen of Portland, Mich., has sold his lumber yard and elevator to the Portland Milling Company. The deal is a large one and of much importance to Portland.

### SAGINAW VALLEY

The Kneeland, Buell & Bigelow Company is installing a battery of boilers in its Bay City mill and making other improvements. This mill runs on a ten-hour schedule the year through. Mr. Bigelow says that the business of both companies with which he is associated is excellent, and that all the lumber manufactured is sold as fast as it is in fit condition. He believes there will be a still further advance, in maple and birch particularly.

Lumber firms on the Huron shore north of Bay City have shipped out an unusually large quantity of lumber by rail during the winter. The rail shipments are increasing. During March the H. M. Loud's Sons Company shipped out

110 car loads by rail from Au Sable. This firm moves most of its stock by water during the season of navigation, and will load a steamer this present week. Alpena and points north on the Detroit & Mackinac railway have been moving a lot of lumber out by rail. Navigation is now open and several cargoes have already been cleared from Alpena.

W. D. Young & Co., at Bay City, are shipping out stock as fast as it can be produced, their plant being operated day and night. All of their stock comes from the North over the Mackinac division of the Michigan Central, more than 25,000,000 feet annually. Shipments of flooring are brisk.

Several years ago the Louds of Au Sable purchased of Hoeft & Son of Rogers City an interest in several thousand acres of hardwood land in Presque Isle county, and the work of cutting the timber was started last summer, as the fierce forest fires in the fall of 1908 did considerable damage and it was necessary to lumber a portion of the timber to save it. The Loud & Hoeft Lumber Company was organized and the Hoeft Mill at Rogers City has been equipped with additional sawing capacity and a large steel refuse burner 24 feet in diameter and 80 feet high is now being constructed. The mill will cut some 10,000,000 feet and it will be shipped by water as Rogers City is twelve miles from a railroad station.

The S. L. Eastman Flooring Company at Saginaw is having a good run of business but the company would like stiffer prices for flooring. An improvement is noted, however, in this particular. The company is carrying a number of million feet of maple lumber in stock and a large quantity of manufactured flooring.

The Hanson-Ward Veneer Company at Bay City, which recently built a large flooring plant to operate in connection with the veneer plant, is running 180 hands and business is very brisk.

The Wylie & Buell Lumber Company is furnishing Bliss & Van Auker of Saginaw 12,000,000 feet of logs, this being on a yearly contract. The Saginaw firm also operates a planing mill and lumber yard in connection with its flooring plant, and is doing a good local and outside business.

### GRAND RAPIDS

Not much change is noted in hardwood lumber conditions here. All choice lumber is firm in price and nothing in the list drags except culls.

Secretary Otis A. Felger of the Hackley-Phelps-Bonnell Company is in the South on a two weeks' business trip.

George Engel of the Engel Lumber Company left April 6 on a business trip through the eastern part of the state.

A. L. Dennis, head of the Dennis Brothers Salt & Lumber Company, will go North on April 11 to visit his company's mills at Dighton. He reports everything moving along nicely in a business way, with prospects for an excellent year.

Ed C. Allen of the Gibbs, Hall & Allen Company, stopped off here April 6 on his way to his home in Leroy. Mr. Allen is interested with his brother-in-law in a mill near Aberdeen, Miss., and has been spending some time in the South looking after the cutting operations. The lumber being cut is largely oak, gum and pine and shipments are being made from Aberdeen.

A. Gibbs of Traverse City, president of the Gibbs, Hall & Allen Company, was in the city April 1 to attend the Hoo-Hoo doings on that date.

Fred S. Torrey of the Henry S. Holden Veneer Company, was in Detroit April 6 on business connected with the reopening of the veneer manufacturing plant at Reed City. It looks now as though the factory would be rebuilt at an early date.

The meeting of the order of Hoo-Hoo held at the Livingston hotel, April 1, was a decided success. Wm. A. Hadley of Chatham, Ont.,

# GIBSON TALLY BOOK

This three-throw tally ticket cover is made from aluminum, and accommodates four tally tickets—4½x8½ inches in size.

Folds compactly to less than one-fourth inch in thickness and fits side or inside coat pocket.

Gives large area of four tickets for complicated tallies, or straight grade can be made on one page.

Accommodates any form of tally ticket desired.

Special, patented, triplicate tally tickets supplied, printed on waterproof paper with carbon backs. Tallies made on these tickets are unalterable. Their use enables the inspector to retain triplicate, and forward original and duplicate. Duplicate designed to be attached to invoice.

These tally books are perfection for durability, convenience, accuracy, and for systematizing the inspection and measurement of lumber.

Patent applied for on covers. Copyrighted, 1910. Triplicate Tally Tickets patented.

## PRICE LIST

Aluminum Tally Covers, each	\$ 1.00
Aluminum Tally Covers, per dozen	10.00
Patented triplicate Tally Tickets (stock form) per 1,000	10.00
Single sheet manila (stock form) Tally Tickets, per 1,000	4.00

Specimen forms of Tally Tickets mailed on application. Covers sold on approval to responsible concerns.

snark of the universe, was the guest of honor, and was attended in his visit here by a delegation from Canada. A class of twenty-nine kittens was led across the catnip fields and a buffet luncheon followed, with speeches and

vaudeville. Those contributing to the entertainment included Fred Whipple of Detroit, Jeff Webb, Carl Schneider, Will Kittle, John Wood, Fred Verkerke, Walter Quigley, and Chas. McQuewan of this city.

## Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

### CHICAGO

Nothing startling has developed in the general hardwood market during the last few weeks; trade maintains its well balanced condition in most quarters, and in general shows a slight, healthy advance in volume and price. Few stocks are reported scarce, and there is no apparent over-production along any line. With the exception of the railroads, consuming interests in general have opened up encouragingly, railroad orders continuing in their usual unaccountable scarcity—though it is probably a fact that the vastly increasing use of steel and concrete is the big disturbing factor.

Heavy oak plank continues to show both the slow movement heretofore evident, and the unsatisfactory prices that have prevailed for some time. Some orders have been accepted at dangerously low figures, but this cannot be said of the trade in general. The position maintained by quartered oak prices and the difficulty of filling all orders satisfactorily, has led to a temporary lull in trade. Woods such as birch are coming into the breach in many cases. A slight falling off in values seems the logical result. Quotations as high as \$52 and \$53 on firsts and seconds, plain red oak, are not uncommon. Number 1 common brings as much as \$36. The movement of red oak is still excellent and the supply below the demand.

While the cypress trade has evidenced a just perceptible let-up since last quoted, the fluctuation is of no moment and has no effect on prices, which maintain the former satisfactory position and promise to continue a reasonable strengthening. Sufficient lumber has been cut at most mills to balance the formerly short stocks.

The upper grades of birch are still exceedingly lively and more or less hard to locate. Firsts and seconds are quoted at \$40, and Number 1 common at \$24.

The lively demand for thick stock is a feature of the maple trade, a radical increase in sales and prices, being evident in boards of good quality. Maple generally is strong, and pretty sure to be so maintained.

The usual shortage in wide poplar is still causing topnotch prices; panel and box boards are hard to secure and orders for other grades are numerous.

Gum is probably not quite as much in demand as a short time ago, but is still a strong factor. Firsts and seconds red gum bring \$34, and sap gum is quoted at \$22.

Basswood maintains a neutral position. No change is evident either way, for trade or prices. One inch firsts and seconds are worth \$42 and inch common, \$30.

Ash is a slow item, except when sold for wagon stock, numerous orders for which are being booked at satisfactory prices. Inch firsts and seconds bring \$45; inch and a quarter and inch and a half \$52; two inch, \$55, and two and a half and three inch, \$65.

Cherry as usual is steady, the consumers maintaining a uniform output throughout the year.

There is no cause for complaint among handlers of hickory, all stocks being in reasonable demand. Wagon stock is much sought after by users, and sales require but little effort, good prices being the rule.

Walnut is a poor seller on the local market just at present, and does not promise anything particularly bright in the near future. Prices have not varied.

Selected No. 1 oak ties sell in quantity for 76 and 77 cents, and mixed ties for 15 to 20 cents less. Railroads are not placing any startling orders, but there is a constant demand.

Prices for piling are extremely fluctuating; sales are scanty in number and proportions.

One of the brightest spots in the Chicago market is the flooring trade. All hardwood flooring is selling without any trouble, and prices are accepted without question. There has been no scarcity of flooring lumber or of finished stock.

### NEW YORK

The hardwood market at New York shows a fair volume of business in all departments. Prices on good-grade lumber are constantly stiffening. Low-grade stock is also moving up in sympathy. Plain and quartered oak, ash, birch, chestnut and maple are holding very firm with offerings being readily absorbed at good prices. There is quite a development to trade in the local manufacturing lines and special lines such as novelty, etc. The export trade is also improving to some extent and a fair summer market is looked for. The hardwood flooring market is also active and a big season is looked for. In general, the hardwood market shows unquestionably that good-grade lumber will demand a high price for the next six months, at least, with general stocks of all kinds enjoying a very fair call.

### PHILADELPHIA

Although hardwood trading has not been up to mark during the last two months, due mainly to unfavorable weather conditions and the constant agitation of the labor question, there has been a more substantial showing all along the line the last fortnight, with an encouraging outlook for the summer. In a number of instances orders are already ahead of the supply at the mill end, and it is predicted the shortage of desirable dry stock will have the effect to enhance values. These improved conditions are apparent also throughout western New York, and especially in the veneer and panel trade, where orders are coming in more lively than for some time. Poplar, oak of all kinds and most of the standard woods hold steady prices.

### PITTSBURG

So far as the hardwood business is concerned, recent developments in this territory have all been very encouraging. The manufacturing trade is steadily becoming a larger buyer and its wants are keeping the supply of first-class dry hardwood to a low point. The contracting trade is also taking more stock chiefly for river work, much of which is now well under way. Railroads and trolley companies have been in the market for timbers on a larger scale lately so that it has forced quite a scarcity in heavy oak stuff. Another want which is hard to fill is that of the automobile and carriage manufacturers for dry hickory for spokes. Apparently, the supply of this wood is very limited and premium prices are being paid right along for good stuff which can be delivered promptly. The yard trade here has not improved materially in hardwoods. There is some more buying, but it is still a question of getting just what they need for present uses, and

## HARDWOOD RECORD

...are showing a disposition to stock up for the fall. Hardwood mills are uniformly busy and all millmen show a disposition to crowd their plants to the utmost and many of them are putting on night shifts.

The tendency of prices in hardwood is steadily upward, and although the market is not yet as broad as many wholesalers expect it will be in a few weeks, yet it is improving in a way which looks mighty good for spring and summer trade. In fact, it seems now rather to be a question of getting stock dry for early summer delivery and getting cars ready for carrying off this stock—than to get more orders.

### BOSTON

In the market for hardwood lumber trading is gradually becoming more active and prices are considerably firmer. All dealers admit that it is much harder to find suitable supplies than it was a few weeks ago. Mills throughout the West are closely sold up so far as dry lumber is concerned. Several local dealers state that it is hardly safe to make sales of lumber today unless one knows absolutely that he will be able to sell the lumber. It is stated that western consumers of hardwood lumber have been freer buyers in many instances than their eastern competitors and that they have been willing to pay better prices than could be obtained here. Manufacturing consumers are fairly busy. The piano trade is active and in some instances plants have been operated evenings in order to get orders out on time. Manufacturers of interior house finish are fairly busy and better reports are coming forward from furniture manufacturers.

The market for quartered oak continues very firm. Owing to the high price of the latter, plain oak, Michigan brown ash and birch are being substituted with good results. The market for plain oak is considerably firmer. More business is reported in cherry and prices are firmly held on a high level. Whitewood continues in very good demand and prices are exceptionally well held. Cypress of the better grades is also firm, with a fair volume of business. In the market for North Carolina pine a little steadier tone is now reported.

### BALTIMORE

Though some of the local hardwood men report business slow, others declare that the volume of their transactions is steadily widening. Some dealers express the opinion that quotations on some of the woods and grades have been advanced too much and that this has had a tendency to check the demand and has created a situation of uncertainty as to the ability of the manufacturers to maintain values where they are. The mill men think they will be able to do so, and the utterances of such men as James J. Hill, who maintains that the railroads of the country will be simply overwhelmed with business by the fall and winter of the present year, would seem to bear out such a claim. At the same time it is to be said that a very fair demand prevails, and good prices are being realized. The offerings from the mills show a disposition to adhere firmly to the advanced figures, and there is comparatively little variation in the quotations. But it is also evident that on a number of items the lists are quite moderate, and it should not be difficult for the buyer and the seller to get together.

The offerings of common stocks are yet rather free, but some improvement has also taken place in this direction, and the indications are that a further upward movement will take place. Some of the yards appear to be fairly well stocked, while the assortments of others are by no means complete. The furniture factories are still buying in such quantities as to indicate that they are having a good trade, the makers

of low-priced goods being rather busier than the plants which turn out high-grade wares.

The export situation is without important changes, the movement showing less vim than was expected early in the year. This is due in part to the uncertainty of the political outlook in Great Britain. This feeling of unrest naturally has an unfavorable effect upon business generally.

### INDIANAPOLIS

The local hardwood market is strong. The demand is excellent and prices are gradually advancing. It looks as if this would be an extraordinary season for hardwoods, and manufacturers say prospects have never been brighter.

Building operations are exceeding all previous records in the history of the city. Vehicle and automobile plants are working to full capacity. Hardwood logs are coming in without great difficulty in prompt transit, and manufacturers are turning them into lumber and veneers as fast as working full time and over time will permit. All grades of oak are especially strong.

### CINCINNATI

March proved to be the mildest in weather conditions ever known in this vicinity. Business conditions trotted a dead heat with the weather. In the hardwood market there is an apparent lack of animation that seems unaccountable. Many reasons are advanced, and among them it is pointed out that the month of February was very busy, which was unusual. The financial situation shows that money is plentiful and easy at the banks, but there is noted the fact that collections are slow. Some of the cooler observers are of the opinion that the slowness is only temporary, however, and was caused by too much ambition to boost prices, and the result was that consumers have held off. Since the opening of April there seems to be a better feeling, and it is asserted that before the close of the month everything will be up to normal, and that the future will be busy.

Poplar commands the center of the boards as the leader in the transactions in hardwoods. There has developed a great scarcity of box boards, which is attributed to the buying for the automobile trade and the efforts of mill men to furnish the class of poplar boards that is demanded. The buying for the automobile trade has become a very marked feature at this point. Good, wide, clear panel stock is attracting strong inquiry. Grades suitable for furniture and kindred manufacturing industries are plentiful, with a fair movement. Low grade is plentiful, with good selling to the box manufacturers. Quarter-sawed white oak of good figure is readily saleable, while the stocks on hand and available are said to be far from sufficient to meet the demands of the market. Plain white oak is said to be growing scarcer, and prices are very firm. Red oak, both quarter-sawed and plain, is in good supply, but there are indications that the growing scarcity of white oak is making red oak a stronger feature of the market, and it is freely predicted that prices will be forced much higher. Ash is receiving much attention from buyers for the wagon and carriage industries, and there is a good demand for thick stock, well seasoned for wagonmakers' purposes. Hickory is meeting with a fair demand from the wagon and carriage trade, especially for wheel and spoke, pole and shaft stock. Red gum still continues to show a steadily increasing growth in the demand on the market, and there is evidence of more attention from manufacturing consumers. Red gum will be found on more stock lists as the days go by, says a large handler of this class of lumber, as he pointed out the largely increasing number of consuming manufacturers who are using it. Walnut stocks continue to increase, and the confidence of the holders in the opening up of the for-

ign demand is such that the holders are coming that not only will the demand continue, but that prices will advance far above present quotations; the holders claim they are fully able and willing to wait. Cherry is occupying the same position as walnut, though the stocks are not so great.

## CLEVELAND

Finer grades of quartered oak and of white poplar continue to hold the center of the stage in this territory. Good oak is selling at firm prices, while the plain variety is meeting with a ready sale. Several new auto body manufacturers recently established here are making a strong bid for clear wide poplar for use in auto bodies. The call for poplar in building operations is also good.

Dealers in hardwood flooring are looking for a big season's business. Oak flooring, both plain and quartered, is being used extensively in the large business blocks which are being erected in the new shopping district, while maple flooring is finding universal favor in residences, relegating the old-fashioned pine flooring to the humbler class of dwellings.

Prices on all lines of hardwoods are very firm, with a tendency to increase on some lines as business seems to warrant.

## COLUMBUS

While the more favorable weather has had a good effect on all branches of the hardwood trade in central Ohio, still there is a little quietude in some directions which is hardly explainable. It is believed that the industrial upheavals such as strikes and investigations are having their effect on trade conditions in general and that some manufacturing establishments are loath to buy heavily under present circumstances. On the whole, however, the hardwood market is in good condition. There is no great surplus of stocks and prices show no tendency to weaken. On the other hand, the entire tendency is to higher levels and in some instances large advances have been announced. Manufacturers in furniture and implement lines are in the market for a large amount of stock and some large orders are reported.

The car situation has not improved to any great extent. There is still some delay in making deliveries and some complaint from purchasers are being heard. The southern roads appear to be in the most congested condition of any and most of the delay is in that section.

Oak is strong in the extreme. The demand for quartered oak is good and with a limited supply, quotations are very firm. An advance in firsts and seconds, both red and white oak, is announced. The other grades are unchanged from previous lists. Poplar is strong also and an advance of \$2 per thousand in firsts and seconds, ordinary sizes, is reported. For the wide sizes the price is quoted between \$140 and \$150. Chestnut is steady and the same is true of hickory. The demand for ash has improved slightly. Basswood is also firm.

## TOLEDO

There is a very firm tendency to the local hardwood market. Oak is proving a leader, and plain red oak is in exceptionally good demand. Firsts and seconds are selling at from \$50 to \$55, and there are plenty of customers for three and four-inch stuff. Quarter-sawed oak is also moving nicely. Factories, especially wagon plants, automobile concerns and furniture establishments are buying liberally. The building trades are also consuming large quantities of hardwoods. Permits last week for new buildings, mostly residences, were issued amounting to \$68,000, and this has brought a market for

a large amount of oak and maple, poplar and cypress. Dry white pine is very scarce, good shop grades having advanced from \$4 to \$5 recently. The demand for hardwood floors has increased wonderfully during the past few days.

Prices remain about the same as last season, and range all the way from 21c to 23c per square foot for quartered plain white oak up to 45c per square foot for fancy patterns. There has been some demand for grill work, but it has been gradually falling off. Elm, basswood and ash are ready sellers, and scarcity in some lines has held all prices up. There is still a strong call for various grades of poplar, but the cheaper grades are plentiful and prices are a little irregular. Fancy grades are scarce and good prices are received. Local stocks are still well filled and there is no inclination to permit them to run down. Dealers are still buying liberally, and commensurate with the increasing demand. There has been a large outside demand from the surrounding territory, one concern reporting that nearly ninety per cent of its hardwood sales recently have come from that source. Shipments have come in promptly from all sections. Prospects are for still brisker demand with possibly an advance in the near future.

## MEMPHIS

The demand for hardwood lumber is of very satisfactory proportions. There are many buyers in the market and, while there is a general indisposition to sell for forward delivery or to book extensive orders calling for shipment later, there are enough orders coming in calling for immediate shipment to keep all of the leading firms here quite busy in getting out the stock. Prices as a rule continue firm on all lumber that is in active demand at the moment, and this covers practically all of the list, with the exception of the lower grades of cottonwood and gum. These are adversely affected by the substitution of strawboard and other material in the manufacture of boxes, and the call outside of No. 1 common red gum is small. The upper grades of red are much wanted, with the supply at the moment none too large. Prices, too, are quite firmly held, being higher now than they were during 1907. Upper grades of sap gum are in fair request though not so much wanted as red. The demand for quartered red and white oak from the domestic trade is very good and prices are well maintained. In plain oak, both domestic and foreign buyers are in the market, and the demand is rather in excess of the supply of shipping dry stock, with the result that it is increasingly difficult to place orders for large quantities. Ash and cypress are both in good request and there is no difficulty in disposing of all the poplar offered in this market. The export demand for plain oak and red gum is reported much better, and there is a considerable business under way with Europe thereon. In fact, the export situation is regarded as better than for a number of months.

## BRISTOL

Market conditions in this section are almost unchanged. There is plenty of optimism among the lumbermen as to the business outlook for the year. Some new business is being received, while prices are little changed. There is no unusual activity in trade, though it is moving along at a fairly satisfactory pace. The lumbermen are to a large extent satisfied with the situation, being able to realize a fair margin of profit on most of the stock handled.

## LOUISVILLE

Market conditions in Louisville are good, and the volume of business done is largely in excess of that for corresponding periods since the

## HARDWOOD RECORD

Prices are much stronger, and while no advances have been recorded, the probabilities are that increased values will be the rule in a short time. While local yards are comfortably filled and stocks are large, the general belief that the amount of dry lumber to be had is appreciably smaller than last year is also stimulating things. The dry weather has prevented some of the mills from operating, and that is resulting in a smaller output than usual, although most of the mills in the South are running. Prices on plain oak have shown advances in the last few weeks, and first and seconds and common are in fine demand. Poplar is strong, and quartered oak, though no price changes are quoted, is in good demand at high prices. Heavy building operations are encouraging the demand for mahogany, and the sales in this market have been large. Veneers are in good demand at better prices.

### ST. LOUIS

The hardwood lumbermen report a fair volume of business. Nearly all items on the list are being called for. The pleasant weather is partly responsible for the improvement in trade. The demand is mostly for the better grades of hardwood, and the supply of dry stock is now hardly equal to the demand. Plain and quarter sawed oak is in particularly active call, and the supply of these items in dry condition is getting low. Poplar, ash and red gum, both in first and second grades, are getting scarce. The demand for red gum in the first grade has increased the call for No. 1 common. Those who are well posted anticipate an increased demand for dry stock in gum and are getting all they can lay their hands on for future use. Wide poplar, suitable for panels, has shown a big increase in price, caused by the increased demand for this item from automobile manufacturers. Cottonwood box boards, both the better and lower grades, are in good request.

### MILWAUKEE

The traffic situation has at last reached a fairly satisfactory stage, with the result that lumber shippers are meeting with little trouble in getting through their stocks. The roads are not so congested and empty cars are not so hard to secure. The improvement in railroad facilities has meant much to the general lumber business and trade is now reaching a normal stage. The remarkably warm spring weather all over Wisconsin has given a genuine impetus to building and the call for hardwoods is stronger than it has been since last year. In fact, a satisfied feeling exists in the entire hardwood trade of the state. The factory trade is much better than is usually the case so early in the season. The sash and door and interior finishing plants are all busy as well as the hardwood flooring factories. Furniture manufacturers are in the market also.

The supply of dry stocks is becoming alarmingly low at some points, especially in inch firsts and seconds birch. The supply of No. 2 birch is low, although stocks of No. 4 seem to be fairly large. Demand for low-grade basswood is much stronger and advances in price are expected. Upper grade basswood is considerably higher. Both plain and quarter-sawed oak is firm. Owing to the rising value and scarcity of hickory and white ash, there is a decided demand for maple. The hardwood flooring plants are picking up all the inch maple they can find.

### SAGINAW VALLEY

The market is in a condition that appears to satisfy both manufacturers and dealers. The trade is brisk and taking everything dry in sight.

Prices are good for maple and birch. The demand for maple has been extraordinary. More than 50,000,000 feet in the lower peninsula have been contracted for during the last three months. The railroads are pushed to get the logs to the mills and shipments of manufactured lumber are active. It is the consensus of opinion that the day of cheap maple lumber is a thing of the past, the stock is steadily diminishing and unless the trade should collide with Halley's comet or be stricken with paralysis, the price of the commodity is going to advance. The output of birch is not large, but there is an active call for it. Basswood and ash are also selling well and stocks are short.

### LONDON

Business in the London market is showing decided improvement. Mahogany and teak are both firm and are likely to remain so. A fair amount of business has been passing since the last report and inquiries have been more marked in hardwoods generally. Whitewood planks 3 and 4 inches, firsts and seconds, are wanted, and holders of this stock ought to have no difficulty in disposing of same through the usual channels. Medium satin walnut is wanted and what is in transit to this port should bring satisfactory prices. Some good sales of quartered oak for forward shipment are reported and no doubt more will follow, as is usual when a movement is made with a wood that has been neglected for some little time.

### LIVERPOOL

Trade here continues fairly satisfactory, though the volume, as yet, is not anything to boast about. Prices are firm, and higher quotations are anticipated in the near future. The firmest item on the market is hickory. In spite of a heavy arrival there is little or no wood on hand, almost the whole supply having gone into consumption at once. Record prices have been realized and merchants here are anxiously inquiring about contracts they still have on hand. There can be no doubt that another famine of hickory logs will be seen this season and buyers here are extremely anxious to get hold of wood. In fact they one and all realize that to obtain adequate supplies they must pay more money, and now is the time for shippers to reap a rich harvest.

The ash log position is less satisfactory and though it is thought that stocks are not very plentiful, the market has become timid and prices have suffered accordingly. Ash planks, however, are scarce both in prime and No. 1 common grades, and values in consequence are ruling high.

Wagon oak planks are distinctly firm and prices are improving. The volume passing, however, is not large. The arrivals have been limited and there is a pronounced scarcity of 3½x12. Coffin oak, in prime, is firm, as, in fact, are all grades of oak boards and planks of every thickness.

Poplar is good, especially the wider stocks; 1x18 and up, is almost prohibitive in value. Buyers here are experimenting largely with cypress as a substitute. Until the present time, this wood has not been used to any extent. All wide stock has enhanced in value in sympathy.

The mahogany position is strong and the recent sales have shown much higher average prices. It is thought that mahogany will go much higher owing to the known shortage of stock on the west coast of Africa. Some choice figured lots were offered at the last sale. The trade position generally is much disturbed by the prospect of another general election in June, the last one not having been of a definite character. It is recognized by both parties that the present government cannot carry on long.

## INSURANCE COST

As a lumberman you carefully analyze the cost of your stumpage, manufacture and sales, but your insurance is usually bunched with "general expense."

We can convince you that fire insurance is worthy of even more careful analysis and attention than any other feature of your business.

We can also convince you that our form of insurance is the safe, logical and economical one.

Will you give us an opportunity to prove our claims?

**This Handy Calculator and Real Leather Case Prepaid—To You For 25c**

YOU will find it invaluable—once you use  
the Dodge Calculator. It is the handi-  
est and most useful article we've seen in  
many a day. The price is no indication of its  
worth. It actually costs us 25c for the calcula-  
tor and real leather pocket case—but we gladly  
pay the cost of postage, handling and packing  
in order that you may have one.

We know how useful you will find the Dodge  
Calculator. We know it will please you so well  
you will remember where it came from. Thou-  
sands of engineers and factory men already have  
the Dodge Calculator, and are more than  
pleased with it.

**We Have Several Thousand But They Won't Last Long**

at the rate they are going now. So send us the 25c and  
we will mail you one at once. After you get it—if you  
don't think it is worth 25c to you—mail it back and  
we'll gladly refund your money. But to practical  
factory men—engineers and men who understand—  
it's worth many times 25c. Send the 25 cents  
with coupon and receive the Dodge Calcula-  
tor by return mail. Remember you get your  
money back if you are not satisfied.

10	Elm	19	Dimension stock
11	Gum	20	Veneers and panel stock

SPECIMEN STATE GUIDE CARD

The HARDWOOD RECORD Supplies free of charge to its lumber advertisers a bulletin service showing the annual requirements of lumber, dimension stock, veneers and panels of wholesale consumers of those materials throughout the United States and Canada. Specifically, the items of the bulletins recite:

Name of state and town  
Name of concern  
Name of buyer  
Line manufactured  
Kinds, grades and thicknesses of lumber  
Kinds and sizes of dimension stock  
Kinds and thicknesses of veneers  
Kinds, thicknesses and sizes of panels

The paragraphs are cut from the bulletins and pasted on patent cards, the numbered tabs corresponding to the kinds of lumber NOT used are removed, and the cards are filed in alphabetical order by towns between state guide cards. No house not in good commercial repute is listed. The card index thus formed, which requires but about an hour's work by a clerk once a week, forms a complete and

quick reference roster of the hardwood requirements of the country, and is an invaluable adjunct to the sales department of every manufacturer and jobber. This service is free to all advertisers, save the cards, the cost of which is nominal. The RECORD system is now used by more than 150 manufacturers and jobbers. Let us put you next to a good thing.

## EVERYBODY'S ASKING

What will Halley's Comet Bring?  
"Read the Answer in the Stars"

Here it is

# ATKINS SILVER STEEL SAWS

are "The Finest on Earth". Why? Because

They help the Filer  
because they are more easily fitted  
and hold their edge and tension.  
No kicks from the Filer.

They help the Sawyer  
Because they run true and cut  
more and better lumber.  
No kicks from the Sawyer.

They help the Proprietor  
because they stand up to their work,  
and are more satisfactory in every way.

## Mattison No. 5-7

No matter how complicated or delicate the pattern—

No matter how deep the cuts—

No matter whether back posts are bent before turning—

No matter if turned parts are built out larger than the squares—

No matter whether the Design is Round, Square, Octagon, Oval or any Polygonal shape—

No matter whether the diameter is 1 inch or up to 18 inches—

This machine will do the work, do it absolutely smooth, and perfect in shape and size, better than can possibly be done by hand, and at a fraction of the cost of Hand Work. If you make Turnings of any kind, let us tell you what the machine will do for you. Asking for information places you under no obligation. Write today.

**C. MATTISON MACHINE WORKS, 897 5th St., Beloit, Wis.**

## Are You in the Market for a Self-Feed Rip and Edging Saw---

A MACHINE DESIGNED TO MEET A WIDE RANGE OF REQUIREMENTS FOR GENERAL RIPPING OR EDGING BOTH LONG OR SHORT STOCK?—IF SO, WRITE US ABOUT OUR

# No. 245 Self-Feed Rip and Edging Saw

This machine combines the advantage of quick adjustment with an edging carriage producing a perfectly straight edge as well as parallel work. It possesses another advantage, viz: that the section of the carriage track at the right of the machine proper may be removed, converting the machine into a regular self-feed rip saw.

No. 245 SELF-FEED RIP AND EDGING SAW

FEED WORKS consisting of both power driven feed-in and feed-out rolls, is carried on a swinging frame which may be instantly raised or lowered by means of a lever, either at the right of the main frame or in front of the edging carriage.

SAW MANDREL is carried on a swinging frame and provided with a gravity belt tightener to keep belt at a proper tension.

The Mandrel Bearing is provided with adjustment for aligning and is raised and lowered by means of a hand wheel either at the front or side of the machine convenient to the operator, when working either as a rip saw or an edger.

EDGING CARRIAGE is mounted on rollers and travels on planed tracks, insuring absolutely perfect edging on material full lengths of carriage.

WRITE FOR DESCRIPTIVE CIRCULAR

**J. A. FAY & EGAN COMPANY** 414-434 West Front St. CINCINNATI, OHIO

## New Hoosier Improved Short Log Sawing Machine

Made especially for sawing veneer cores and small logs, up to 20 inches diameter and from 2 to 12 feet long.

The machine is built with a heavy cast iron husk frame that carries the feed works and mandrel which runs in self-oiling boxes. It is equipped with a variable friction feed, with cable attachment to carriage. Feed is strong and rapid.

The dogs are of an entirely new style, and dog the log, or piece to be sawed, in the end instead of top and bottom, and can be instantly changed to grip any length log that the carriage will accommodate.

The machine consists of but three pieces, the husk frame, track frame and carriage. It can be quickly and easily moved, and can be operated with a 10 H.P. engine. The machine will saw from 3,000 to 6,000 feet per day and weighs 3,500 lbs.

The largest saw that can be used is a 48-in. diameter.

For further information, address:

### JOSHUA OLDHAM & SONS

WORKS & EXECUTIVE OFFICES: NEW YORK  
Brooklyn : New York City SAW WORKS White-Henry Bldg., Seattle, Wash.

## The "Tower" Pony Edger

For portable and small stationary mills. Hundreds in use. Suitable for any mill having from 15 h.p. up.

Increases the output of the mill one-third. Grades the lumber. Takes out hearts, shakes and knots, and makes firsts and seconds out of commons. Saves considerable No. 1 lumber that is wasted when the edging is done on the main saw. Gives the boards straight and parallel edges, and makes them of standard or any desired widths.

Rips a wide board into two or more narrower ones, either at the same time that it edges it or afterwards, as may be preferred. Causes the lumber to sell more readily and to command a higher price.

Occupies little room. Requires only nominal power. Simple. Easy to operate. Readily moved from one set to the next. Does not get out of order.

By far the best edger made. We manufacture 72 different sizes and styles of Edgers and 10 sizes of Trimmers. We also make

Saranac Machine Co., St. Joseph, Michigan

**High Daily Averages** in skidding depend principally on initial capacity and the degree to which the skidder can be operated to that capacity.

**The Clyde Self-propelling Steam Skidder** is absolutely independent of loading and is never held back nor its full capacity interfered with by any loading conditions that may exist. Full capacity is therefore possible when conditions are favorable and the hauls are short thus insuring a surplus of logs to compensate for those days when conditions are unfavorable and the hauls are long.

With the independent and separate loading unit, the loading crew may then be pushed to its fullest capacity at all times assuring a uniform daily flow of logs to the mill. It is self-propelling, can move frequently without loss of time and sets quickly because of its special steam guying device.

Send for our descriptive catalogue, also testimonial booklet

## Results Are What Count

A combined skidding and loading machine that will clear up the largest area at a setting and can be moved and set up ready for business in the shortest possible time will get the best results.

The latest Russel Machine has some distinct improvements that save time, trouble and money.

The skidding sheaves are hung from a vertically hinged jib the outer end is gauged by two power tightened lines.

An all-steel machine which has special features that absorb all shocks and strains. Rapid in operation and setting. Swinging boom easily controlled by one lever. The machine is raised or lowered by hydraulic or patented geared jacks. Built for 2 or 4 lines. A machine that will interest you; because it is the fastest and strongest of the day.

# CHICAGO

THE GREATEST HARDWOOD MARKET IN THE WORLD

## A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

*Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.*

## The T. Wilce Company

22nd and Throop Sts. CHICAGO, ILL.

To close a partnership, I will give a great bargain on 8,000 or 16,000 acres of hardwood timber land in Arkansas. For full particulars, address

## RED BOOK

Published Semi-annually  
in February and August

It contains a carefully prepared list of the buyers of lumber in car lots, both among the dealers and manufacturers.

The book indicates their financial standing and manner of meeting obligations. Covers the United States, Alberta, Manitoba and Saskatchewan. The trade recognizes this book as the authority on the lines it covers.

A well organized Collection Department is also operated and the same is open to you. Write for terms.

If you want to reach the wholesale consumers of hardwood lumber throughout the United States, a HARDWOOD RECORD advertisement will do it for you.

If you want to reach the hardwood manufacturers of the United States, a HARDWOOD RECORD advertisement will do it for you.

The HARDWOOD RECORD represents high-class, special, class circulation, with a minimum of waste circulation.

Ask any HARDWOOD RECORD advertiser for experience on results.

## WELDING LUMBER

Jointing chair seat lumber under prevailing conditions makes it a proposition that needs careful attention. To have defective seats returned is not only a handicap to reputation but an unnecessary expenditure.

## THE TAPERING WEDGE DOVETAIL JOINT

*Made on the Automatic Dovetail Glue Jointer* insures perfect joints that cannot open or show the varnish line, because the wedge dovetail welds the stock together, forcing the glue into the pores of the wood, making a permanent clamp which is stronger than the natural wood; yet these results are accomplished in one operation at two-thirds less cost than the ordinary method of jointing lumber.

A sample of the wedge joint, without glue, with detailed information will be sent on request.
